49108. Sir FRANCIS MOWATT.—You are stationed in Achill?—Yes. I am acting as administrator. I have only been here a few weeks, so that I cannot know much personally, but during the short time that I am here I know from observation that there are great possibilities for the island if a paternal government were to look after us in an adequate manner. Both land and sea are capable of development. I confine myself to the land. If you only just run through the island and look at the land as I have myself for the short time that I have been here you will see evidence that improvements can be effected in the lands. You will see the picturesque patches of tilled land, growing meadow, rich meadow, and you will see those patches in the most barren parts of the island—on the mountains and in the bogs—and they indicate what might be done if proper assistance was afforded. We have the population increasing here. It is surprising to find that we have at present about 6,000 or 7,000 people on the island at present; and I am informed, and I believe correctly, that nearly half the population is away at present working in England and Scotland, including not only men and women, but boys and girls who should be at school. With such an active industrious people if the land were drained properly it would be able to grow crops where they cannot be produced at present.

49109. Sir JOHN COLOMB.—Do you mean farm drains?—As you go through the island you will see the lands flooded. If they were drained the farms could then be drained quite conveniently.

49110. Are the farms well drained?—Some of them here and there are. Where you have a comfortable man who can afford to spend a few pounds you will see that he has his farm nicely arranged and is growing a nice meadow.

49111. If there is that population on this land, and the men are here from November to May, which is the time for draining, what are they doing if they are not draining?—I cannot give you an answer, b I know that they must be employed, especially t men.

49112. I am talking of their own farms?—I take that the men certainly work on their own farms, a as regards the women if there were some industri started, such as stitching, knitting, spinning, or som thing like that it would be a good thing to keep the going in winter time.

49113. Mr. KAVANAGH.—How do you account f there being no emigration to America from Achill?— They do emigrate, but to a limited extent.

49114. You say that the population is increasing?— I have read that the statistics show that Achill the only place where you have the population in creasing. I cannot go beyond that.

49115. There cannot be much emigration?—I sup pose that you have not so much as you have else where.

49116. How do you account for that in such a poo district?—Because the migrants go away and earn much during the summer months as will keep the during the winter.

49117. They do that in other parts and yet the emigrate?—Not so much as in other parts of th country. I know a good deal about Galway, May and Roscommon, and I have no hesitation in sayin that this is the only district in which the girls e pecially migrate all round. I hope that we shall g assistance at this particular time. Perhaps this not the place to sound the note of warning, but, u fortunately, I will have to sound it soon. The rai as you will see going along, has the potato crop a destroyed, and also the oats to some extent. It is hard task, but I am afraid that it is a task that w shall have to go through—to support the people durin the winter months. I am afraid that we shall have very bad winter and a very bad spring.

Mr. PATRICK O'DONNELL examined.

Mr. Patrick O'Donnell.

49118. Sir FRANCIS MOWATT.—You are a member of the County Council of Mayo, and reside at Newport?—Yes. Before coming to the evidence which I will give, which will be very brief, I must protest against the remarks of Mr. Doran, Chief Land Inspector to the Congested Districts Board, where he refers to those agitators who are interfering in the work of the Congested Districts Board on the Sten property. I must say that we are no paid agitator but the elected representatives of the people, and ha a better knowledge of the wants and requirements the district than any paid official of the Board.

49119. Sir JOHN COLOMB.—He did not say pa agitators?—Well, agitators. So far as we are co

d, we are only too happy to co-operate with the ested Districts Board. There can be no doubt ever but the resale of the mountain to Stoney a huge job, and if the opinion of Canon Grealy he representatives were consulted, this deal would have taken place. The remarks made by Mr. n with reference to Canon Grealy are entirely lled for when he says that "this stab in the " was probably because he did not call on Canon ly and he was not consulted in the working of Board in the district. It is a well-known fact Canon Grealy has always taken a deep interest ne welfare of the poor of his parish, and also was anxious to facilitate and co-operate with the d in the great question of relieving congestion, it was on his suggestion and advice the O'Donel ns (in Newport) were purchased at 7½ years' pur- e on the valuation, while Mr. Doran gave 26 s' purchase for the tenants' interests on inferior on the Stoney Estate. Indeed I feel certain that on Grealy would not at all feel honoured by a call n Mr. Doran.

120. Most Rev. Dr. O'Donnell.—Have you seen e operations of the Congested Districts Board?—

121. What do you think of them?—I believe they been a great failure, and I can only say that the le of the mountain to Mr. Stoney was a grievous ake on the part of the Congested Districts Board.

122. Sir John Colomb.—What is the particular of the Board that you consider is a great re?—The re-sale of this mountain to the land-

123. Is that all?—It would have been better to it to the people.

124. Is there anything else in which you say that Congested Districts Board has been a failure, or ou mean these particular cases?—These few cases.

125. And only those few cases?—The Congested ricts Board has done tremendous work and a great unt of good in the country. I would be very sorry e it abolished. On the contrary, I would be glad ave it added to and strengthened. Unquestion-, if Canon Greally had been consulted before this it would not have taken place, and it would have d a lot of unpleasantness.

126. Most Rev. Dr. O'Donnell.—They have ired the land and the rents are being collected, that rent is being expended on improving the s and making them much better for the tenants get them?—That is so, but this land taken has been striped yet, and some of the tenants offered ings on the place have refused to take them.

127. You may be perfectly sure that there will be one to take it?—One of the tenants who was ed it would not take it. He has got a holding n Mr. Doran.

128. Do you think it could be offered before the rd became owner of the estate?—It could not be; I heard from one of the tenants that they would ffered holdings on the estate, and he said he would take it.

129. It has not been offered yet?—Along the sea- d of the Westport Union, which runs from the eries to Blacksod Bay, the fishing industry is ncipally carried on in small boats and curraghs for the want of proper harbour accommodation, larger boats, the fishermen of the district are un- to reap the great advantages which could be ved from having suitable vessels. Herring and kerel are the principal kinds of fish taken, but ling, plaice, sole, turbot, haddock and lobsters also taken in abundance. The principal fisher- who live in the village of Currane, Achill, have ly got some large fishing boats from the Congested ricts Board, and I have learned from them that time allowed for paying up those instalments on loans is much too short (five years), and unless r get the time extended to ten years, they must be pelled to hand back those boats again.

130. Sir John Colomb.—Can you give me any of what each man has made on these boats in the years?—They have only had the boats for one r. The term for repaying the money was five rs, but they would wish it extended to ten years. the past twenty years there has been a great waste ublic money in the erection of useless piers along coast, and I am of opinion that fully £50,000 been thrown away on such works in the Westport Union alone by the Board of Works; for instance, at Lecanvy, which cost £7,500, at Dugort, and the Valley in Achill, where there is neither a boat nor a fisherman, and the Mallaranny pier, where a boat has not lain alongside since it was built.

49131. Mr. Sutherland.—When the piers have not brought boats in the past how are they to bring them in the future?—Those are useless piers in their present state.

49132. Do you think that was never said before these piers were built?—But I am saying it now again as a practical fisherman who knows it.

49133. Mr. O'Kelly.—Mallaranny pier is perfectly useless?—Yes. A pier has been built at Dugort by the Congested Districts Board, at a cost of £1,832, although there is neither a fishing boat nor a fisherman within miles of the place. There can be no question of this.

49134. Sir John Colomb.—And do no fishermen come in from other places?—At times they may come in.

49135. Most Rev. Dr. O'Donnell.—Do the Iniskea men come in there?—Yes, occasionally, and they come up here to Achill Sound principally.

49136. You were nearly forgetting that?—They come up principally to Achill Sound and sell their lobsters here. I also see that £1,849 has been expended on a pier at Keel, and I must say the work done does not appear to be worth the expenditure—the entrance is so narrow that an ordinary rowing boat can hardly pull her oars clear of the rocks on each side; besides the place is filled up with rocks and boulders. I would strongly recommend that the Congested Districts Board should thoroughly clean and deepen the harbour at Cloghan (Currane, Achill), so that the fishermen could enter in all states of the weather.

49137. The Congested Districts Board has four piers in Achill and I am afraid that you do not approve of any of them?—I will, with great pleasure, approve of the one at Currane, Achill, where there is a large population, but no one will approve of building a pier where there is no fishing population and no boat. There is no boat within three miles of the Valley in Achill, but the pier there was not built by the Congested Districts Board.

49138. Sir Francis Mowatt.—We won't go back to these old piers. We all agree that it was a msitake?—Achill has a large migratory population. As Mr. Sweeney has said large numbers migrate to England and Scotland every year, but I think that there is a great future before Achill in the way of fishing and industries. The Mayo County Committee of Agriculture and Technical Instruction sent a crochet instructress to the island for six months, and she has informed me that more intelligent or industrious girls she has not yet met in Mayo. Some of them, after three months' training, were able to earn from 5*s*. to 7*s*. per week at crochet work, together with doing their household duties with their parents at home. I believe if the Congested Districts Board sent about three crochet instructresses to the island during the winter months that it might, after some time, be the means of stopping the demoralising annual migration of the girls of Achill to Scotland.

49139. Sir John Colomb.—There is a lace school?—Yes. It is working under the nuns. There is also some pretty good land, in fact four or five good farms of land; one owned by Mrs. M'Donnell, of the Valley, another owned by Mr. Sweeney, senior, and Mr. Sweeney, junior. Mr. Sweeney has informed me that they will have no objection to selling their lands at a fair price. So far back as 1846 or 1847 all these lands on the island belonged in fact to the tenants. The rental of the island of Achill was £800. By the year 1879, when the Land League was started, it had been raised up as high as £5,000. The fishermen of the Currane portion of Achill are as progressive as any to be found on the west coast of Ireland. To show that they prosecute their fishing with great energy ond industry I may mention that some of them have gone down as far as Downing's Bay in Donegal and have been fairly successful there. Some of them in fact do not return home until Christmas, and on their behalf I put in a statement which speaks for itself in relation to fishing and mining and soforth.

Aug. 26, 1907. Mr. JOHN M'GOVERN examined.

Mr. John M'Govern.

49140. Sir FRANCIS MOWATT.—You are a member of the County Council of Mayo and reside in Newport?—Yes. I represent Newport West on the Rural District Council, where is situated this Stoney estate that you have heard so much about. It is not necessary for me to refer to the matter now in detail, but I may say that so far as Canon Grealy's evidence was concerned I thoroughly agree with it, but he made one slight mistake with regard to that man Conway, the herd. He had two daughters and a son out in Colorado, and the most of the money he was in possession of, I believe, he got from those three. It has been stated here that Mr. Stoney would not sell the arable land unless he got back the mountain. I deny this, because on the 9th of November, 1903, I was one of a deputation who accompanied the tenants to Mr. Jones, who was head landlord, and Mr. Jones stated to us that he was only too anxious to sell, and that in any place he would invest his money he would get better results than he was getting from Mr. Stoney, as he held under lease. The Stoney portion of the estate was vested in the Congested Districts Board in March, 1905, and the entire Jones Estate was vested in the Congested Districts Board in June, 1905. Consequently, if Stoney never gave his consent to sell the Congested Districts Board would get possession of the land. The Stoneys were only the middlemen.

49141. Most Rev. Dr. O'DONNELL.—Had he a lease?—I think he had a lease, but it appears that as I am on the question of this mountain Mr. Doran made a statement in my presence here to the effect that Mr. Stoney's farming arrangements would be disarranged if he sold this land.

49142. Mr. Stoney said that to Mr. Doran?—Mr. Stoney has not grazed this grazing farm within my memory. One portion of it, Rockfield, was grazed on the 11 months' system by Pat Moran and others.

49143. Mr. O'KELLY.—So you don't think that the statement of Mr. Stoney to Mr. Doran was accurate?—I don't believe a word of it, because the man did not farm himself. I might mention that immediately after getting the answer from Mr. Jones that he was perfectly willing to sell a deputation of the tenants waited on Mr. Stoney. Mr. Jones, Mr. Stoney, and Mr. Vereker were on a shooting expedition that day. In the presence of Mr. Jones, Mr. Stoney promised them that he had no objection to sell the land.

49144. Sir JOHN COLOMB.—At a fair price?—Yes. He got a fair price, I believe. The Congested Districts Board commenced operations on the land, first beginning to construct a road which was laid out by the engineers, and when some of the work was laid down Sir Roger Palmer's agent came along and ordered them off. It appears that they got a right of way in a place that Mr. Stoney had not got. It appears also that they opened up a quarry and put up a shed to use as a powder magazine, and Mr. Jones came along and told them that they had no right to quarry it.

49145. Most Rev. Dr. O'DONNELL.—Does not that show the anxiety of the Board to improve the land for the people?—Quite so, but it shows also that there must be a lot of bungling when you buy an estate and don't buy the mineral rights. They bought this from Mr. Stoney and Mr. Jones claimed the mineral rights and prevented them from working it, as I believe.

49146. Sir FRANCIS MOWATT.—They have never paid for the estate?—The estate is vested in the Congested Districts Board.

49147. Most Rev. Dr. O'DONNELL.—Not yet, and those improvements were begun really before their time for the advantage of the people?—That is the Stoney No. 1 estate. The people on this estate have, as Mr. Doran states, an average valuation of less than £1 10*s*. These people never made their rent on the land. I have known myself people to spend their week gathering cockles and other shell fish. I have known them to leave home at 9 or 10 o'clock at night and carry those shell fish on their backs to the town of Castlebar and come back the following night, which meant leaving home at 10 o'clock at night and not getting home again until daylight of the second morning afterwards. I can give you a case of hardship to a woman, the mother of a large family, which occurred seven years ago. I was coming from a wake at 3 o'clock on a summer's morning when I met the woman sitting beside Mr. Thomas O'Donnell's grand gate resting herself. There were two asses on before her. She had a basket of cockles, which she had been carrying on her back, left beside her. She walked into Castlebar, which was twenty miles from her own home, and she walked twenty miles back, and the day after she got home she was confined of a youngster. I consider, taking all the circumstances into consideration that that is a case of very great hardship. The men of those families migrate to England and the girls to Scotland. The same thing would apply to the Stoney Estate as applies to the island of Achill so far as migration is concerned.

49148. Considering that the valuation is so low don't you think that the Congested Districts Board ought to do its very utmost to enlarge those holdings and do it quickly?—Yes, but I cannot agree to the Congested Districts Board sending their representative about among the tenants asking them if they are willing to sell and giving them exceptional prices for the purpose of inveigling them to go to America.

49149. Mr. SUTHERLAND.—Do you assert it was their intention to inveigle these people to go to America?—I heard that.

49150. Do you think that is the policy of the Congested Districts Board to bribe these people to go to America?—It is against the interests of the Board, I believe, to do so.

49151. Why then insinuate it?—I don't think you can hold the Board responsible for everything that the officials do.

49152. Most Rev. Dr. O'DONNELL.—Don't you think if the officials are to do their work efficiently they must receive more support from public opinion in the locality than suspicion?—I may tell you that we have given as much support as we possibly could. We went so far as to prevent the tenants from buying direct through Judge Ross's Court. The agent is present—Mr. Delandre.

49153. It is absolutely necessary that people of that sort should not buy direct?—But I believe that the majority of the tenants on the estate were prepared to buy direct, and we induced them to buy through the Congested Districts Board. We instructed a solicitor in Dublin to appear on behalf of the tenants in Judge Ross's Court, and the tenants met about a month ago and they have decided not to purchase through the Congested Districts Board unless they are consulted as to price.

49154. Mr. O'KELLY.—Would those Kilcoynes have found a purchaser for their holding in case the Board did not buy?—They might. It is doubtful.

49155. Do you know those local people?—Every one of them.

49156. Was it their intention to leave the country in any case?—Not in all cases. In some it was. It was in the case that Mr. Doran mentioned. It was Myles Kilcoyne's intention.

49157. Suppose that the Congested Districts Board did not step in in these particular cases would other private individuals have stepped in and bought the interests of those tenants?—I don't believe they would.

49158. Those tenants having decided to go to America?—I don't believe they would, simply because the Congested Districts Board had the estate purchased and they believed they would get an enlargement of their holdings.

49159. Though it might not have been the intention of the Congested Districts Board to send those tenants away to America, that was the effect of their interference?—Quite so.

49160. Most Rev. Dr. O'DONNELL.—That is a statement put to you, but it is not Mr. Doran's statement?—I know that.

49161. Mr. O'KELLY.—Do you think if any portion of those 2,000 acres to which so much reference has been made were utilised for the benefit of those intending emigrants they would have remained at home?—The tenants scarcely ever do anything without consulting me, and I have it from the tenants that they never required any land outside their own if the land was striped, if they had the right of the mountain that they enjoyed heretofore, and if they got a portion of the lands which are on the estate.

49162. Sir JOHN COLOMB.—Are they under the impression that they had the right to that mountain?—I believe they had.

9163. You heard they evidence that they had not? don't agree with it for this reason, two years ago had a seed distribution in the Westport Union. e man named John Loftus, of Bunhowna, was rged for five bags of potatoes. He was charged three bags as a valuation of two shillings for the ntain, and he was charged for two bags as a uation of £1 5*s.* of the holding on which he lived. nsequently I believe that the man would not be d for the mountain unless he had a right to it.

9164. Are you a farmer yourself?—No, I am a pkeeper.

9165. Have you got a licence as well?—Yes. About re-sale of the mountain. I met two of the ten- s to-day at Mullaranny station, and they seem y sore on it still being taken back from them. twithstanding the fact that the Board has been in session of the Stoney Estate since 1900, yet in De- ber, 1906, notice appeared in one of the local ers stating that Mr. Stoney had poisoned it for the truction of vermin, which goes to show that he has right of game over the whole mountain.

9166. Most Rev. Dr. O'Donnell.—The title is not plete on the second purchase?—It is number one t I am referring to.

Mr. Doran.—He has not any claim to the game on Stoney Estate except on the mountain?—The ice I refer to specified all the mountains and nds on the Stoney Estate.

Mr. Doran.—He has no more right to it than you e.

9169. Most Rev. Dr. O'Donnell.—We have hing to do with these notices?—They go to show t he has the right.

Sir Francis Mowatt.—They only go to show that ut the notices in.

9171. Mr. Sutherland.—You don't believe that Congested Districts Board would do that?—I 't believe it.

9172. Mr. O'Kelly.—At any rate the fact re- ns that this notice appeared in the local Press the signature of the gamekeeper, and is it not reasonable to suppose that the public opinion ld be that it was inserted on the authority of Mr. ey Stoney?—Quite so.

49173. Mr. Sutherland.—That would not settle it?—It would go to show that he had the right. *Aug.* 26, 1907.

Mr. Bryce.—It would not go to show that he had the right, but that somebody alleged he had the right, which is quite a different thing. Mr. John M Govern.

49175. Mr. O'Kelly.—At any rate it would produce the impression that Mr. Vesey Stoney's agent desired to create?—Since the Congested Districts Board got possession of this estate the tenants have been prosecuted for cutting seaweed also.

49176. Sir John Colomb.—Where they had not before any right?—They had a right to it, because it was decided in the court. Mr. Stoney had them prosecuted in the Petty Sessions Court at Newport and the case was dismissed by Mr. Horan, who was Resident Magistrate at the time.

49177. Do you state that the Congested Districts Board are stopping tenants from cutting seaweed where they have the right to cut it?—No. I state that Mr. Stoney, since the Congested Districts Board got possession of the Stoney number one estate, prosecuted the tenants and convicted them for cutting seaweed where they had heretofore a right to cut it. Ten or twelve years ago the tenants were prosecuted for cutting seaweed. Mr. Horan, the Resident Magistrate at the time, dismissed the case against Mr. Stoney, and from that time until after the property was purchased by the Congested Districts Board the tenants had the right of cutting seaweed on the estate and Mr. Stoney then prosecuted and convicted them. It appears that the Congested Districts Board did not purchase the seaweed with the estate.

49178. You mean the foreshore?—Yes. The Jones Estate is situated somewhat similarly to the Stoney Estate. The valuations may be a little more, though in some instances they are less, and the same remedies, of course, apply to the Jones Estate as to the other. It cost about 21½ years' purchase. The representative of the late Victor E. Kennedy offered it to the tenants, before Mr. Jones purchased it, for 11 years' purchase or thereabouts, but the tenants refused to buy it on the ground that if they got it for nothing it would be no good to them. The people along the seaboard between Newport and Mallaranny are very good fishermen, but the Mallaranny pier is becoming useless except as a shelter in case of storm.

Mr. Michael Masterson examined.

9179. Sir Francis Mowatt.—Where do you re- ?—At Shraheen. Mr. Michael Masterson.

9180. Are you a farmer?—I have got two acres of l. At one time on Mrs. Pike's Estate in Achill tenants were living on the grazing land occupied by Mr. Sweeney. Of course, the landlord ught that this land was too good for the tenants evicted them out of it, and hunted the tenants on to the shaking bogs on the estate.

9181. How long ago are you speaking of?—About r 50 years ago. When the tenants were evicted were sent up on to these shaking bogs, and each land was divided into stripes, and the people put on to these stripes, and personally I under- d from the old people on these stripes the value he time was ten shillings, and from that it was -rented up to £12 each stripe.

9182. Mr. Sutherland.—From ten shillings?— re were three tenants put on to a stripe, and each paying ten shillings. Then each of these tenants rack-rented up to £4. Then they had the right the mountain; not altogether the right of the ntain, but they had a great deal more of the ntain than they have now. The landlord took of the mountain away from them, and fenced t of the mountain for himself. Part of the hold- at the time was bog and part rough land with es, and the people had to set to make land of shaking bogs, and to carry the stones out of this gh place, and you can see the strand from Achill nd to Darby's Point covered with stones to grow weed. And, furthermore, the rent of the land was aced by Act of Parliament by five shillings in the nd, and there was another reduction on the second utory term; but there were poor people who could go into Court and settled with the landlord out Court, and they got the reduction of free grazing he mountain.

9183. Sir John Colomb.—Added to the holding in- d of a reduction?—Yes; three shillings in the pound and free grazing, but he charged the tenants a shilling for the right to the mountain, which is not in writing in the agreement.

49184. They made a written agreement out of Court?—Yes, but they did not mention in the agreement that this shilling was charged to the tenant for the right to the mountain.

49185. Then he cannot enforce it?—He added the shilling to the rent.

49186. Is there a judicial agreement?—Yes, but he never mentioned in the agreement that the people were to have the grazing.

49187. Mr. Sutherland.—So it was only two shillings reduction they got instead of three?—No. They got nothing at all.

49188. I thought you said they got three shillings reduction?—Some people with no cattle got three shillings and more people who had cattle got none. Now, as to the fishing industry. The Congested Districts Board made a lot of improvements on the pier at Darby's Point, opposite the coastguard station. Certainly I say if they spend half as much as they have done it would be an everlasting benefit to the people of Achill, and especially to the fishermen.

49189. If they carry the pier further out?—Yes; that is to extend the pier by about half its present length. If that were done, then any ship coming into Clew Bay could come along there with a cargo. I have travelled in England and Scotland, but if I went into these particulars I could keep you until the morning telling the privations and hardships of young girls leaving Achill at twelve years of age for Scotland to earn their livelihood. That is a poor thing, sleeping out in cold barns when they should be at school. In fact I lost my own health over in England working in the hay fields getting wet and going into a cowshed to sleep at night. That is why I came home.

Aug. 26, 1907.

Mr. Edward J. Corrigan.

Mr. Edward J. Corrigan examined.

49190. Sir Francis Mowatt.—Where do you reside?—Ballycroy. Ballycroy North and South contain 52,168 acres. The valuation is £1,284. That is on the agricultural land, excluding the game. On one estate of 11,000 acres purchased by the Congested Districts Board much needed employment was given. 40,000 acres are in the hands of three landlords. On two estates the game is the most valuable. On one of these estates, the Busby Estate, the tenants have the grazing. On the other, by far the largest, 29,160 acres, the tenants have no right of grazing outside the ambit of their holdings. The landlord grazes 17,077 acres. Excluding the demesne, which is about 600 acres, he grazes 16,500 acres of the best grazing mountain in Ballycroy. The greater part of it is reclaimable if money were expended on it.

49191. Most Rev. Dr. O'Donnell.—The gravel comes up pretty near the surface?—There is splendid soiling for reclamation. I have been working steward for eight years with the landlord and another gentleman and they expended double the rent they were receiving on improvements; the improvements took place on lands occupied by the landlord. The rents got reduced and there is no expense for labour.

49192. Mr. Sutherland.—What was it expended on?—Draining and reclamation and road-making. Since that was dropped there is no labour given.

49193. Sir John Colomb.—It dropped with the Land Act of 1881?—Exactly. Eighty-four tenants hold 4,548 acres, of the average valuation of £3 16*s.* 6*d.* each tenant. Nine tenants hold 7,505 acres, with an average valuation of £6 or £7. The landlord holds 17,017 acres, with a valuation of £348 11*s.* The majority of those large grazing ranches are reclaimable. They are fit for tree-planting on the mountain side. The landlord has offered to sell to the Congested Districts Board, but it appears that they have no money to buy. Here is a letter I got a few days ago from General Clive. He says, "I should be glad to meet my tenants who like to come here as you suggest, but I have only to tell them that the Congested Districts Board have written that they have no money available and are therefore unable to consider the purchase of the estate at present."

49194. Most Rev. Dr. O'Donnell.—That disability may disappear later on?—Yes.

49195. Did the Commission pass through that property when coming to Mallaranny?—They did when coming from Belmullet. There is not a better estate in Ireland for reclamation.

49196. Sir John Colomb.—You were a steward overlooking the carrying of these reclamation works in former days?—Yes.

49197. From your knowledge and experience can you tell the Commission did the expenditure on the reclamation result in payment back again of the expenses incurred?—It has.

49198. And do you believe that a great deal of the land there would well repay the expenditure of intelligently applied labour?—I am quite certain of it.

49199. And add greatly to the value of the land?—I am quite certain.

49200. And defray the cost of its reclamation?—Yes. The only thing I would suggest is that the Congested Districts Board is the Board that we have the most confidence in, owing to his lordship and Father O'Hara being on the Board. Also through the parish committee the people are improved in their conditions by the building of out-houses, the removal of cattle and so on. The Congested Districts Board should get more funds for these purposes and for the reclamation and draining of those mountains. The drainage of these vast mountains would make the climate healthier. In reference to fishing, I cannot speak of my own knowledge, but I am told that there are sixty-seven boats in the parish of Ballycroy, and had there been a pier built at Fahy, near Doona, there is no doubt they would be better employed at fishing than in going to England and Scotland. Great disasters happened twice, in 1838 and 1840, and from that there is no fishing. They are afraid to go. There are only twenty tenants out of 297 entitled to Board of Works' loans, that is people of £7 valuation. If the people who own 30 acres of land could get loans spread over a number of years—say, 40 or 45 years—I am sure it would better their condition, and until the plough takes the place of the spade there is no chance of improving these places.

49201. You consider that an economic holding even where the land is so reclaimable should be a holding large enough to be worked with a plough?—Certainly, so far as our district is concerned.

The Commission adjourned.

NINETY-SEVENTH PUBLIC SITTING.

WEDNESDAY, AUGUST 28TH, 1907,

AT 11.0 O'CLOCK, A.M.

At the Courthouse, Castlebar.

esent:—The Right Hon. Sir FRANCIS MOWATT, G.C.B. (in the Chair); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; Most Rev. Dr. O'DONNELL; JOHN ANNAN BRYCE, Esq., M.P.; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. THOMAS RUTLEDGE examined.

Aug. 28, 1907.

Mr. Thomas Rutledge.

9202. Sir FRANCIS MOWATT (*in the Chair*).—Mr. tledge, you appear on behalf of the Irish Landners' Convention?—Yes, sir, of the branch in the unty Mayo.

9203. We have the advantage of a precis of your dence, and we will ask you questions as you go ng?—In order to meet the suggestion that Mayo ates are not a security of high class, or not as sound security as estates in other counties——

9204. I may tell you we have had no suggestion that as yet?—It is a prevalent opinion in this part the world. In order to meet that suggestion, I ire firstly to call attention to tables 69 and 71, ges 72 and 74, in the Report of the Irish Land Comssion for the period ended 31st March, 1906, ling with judicial rents which have been fixed by methods provided by the Land Law Acts for first d second statutory term, from 1st August, 1881, 31st March, 1906, and from the commencement of second statutory term to the same date, and I e to call attention to the concluding paragraph in tion 8, sub-section 1 of the Land Law (Ireland) , 1881, dealing with applications to the Land art to fix the fair rent to be paid to the landowners, follows:—"After hearing the parties, and having ard to the interests of the landlord and tenant, pectively, and considering all the circumstances of case, holding, and district, may determine what uch fair rent. The tables indicate that properties his county must have been let to tenants upon more sonable terms than in other counties in Ireland, an examination of the tables will show that the rage reduction given for all Ireland in respect of t term rents amounts to 20·7, whereas in the unty Mayo the average reduction only amounts to l.

9205. Most Rev. Dr. O'DONNELL.—Are those uctions general?—Yes, my lord, for all Ireland. s shows that Mayo properties have been let at 1·6 aper than the rest of Ireland, and a comparison his reduction with other counties works out more ourable. For instance, in the Province of Munster rage reduction 22·1, the County Mayo reduction of is less than in any other county in that province, in the Province of Leinster, average reduction 20·1 s less than any, except in the Counties Kildare, King's, 18·4, Westmeath, 17·8, and Meath, 18·9. the Province of Ulster, average reduction 19·7, s less than any counties, except Antrim, 18·7, vn, 19, Fermanagh, 18·4, and Londonderry, 18·6. the Province of Connaught, average reduction , it is less than in any other county, Galway g 22 and Leitrim being 22·3. Therefore it is as h as 2·9 less than the former and 3·1 less than latter.

9206. Sir FRANCIS MOWATT.—When you say that is a proof that the lands were let at lower rents, do not mean actually lower, but lower relatively he value of the land?—Quite so.

9207. Most Rev. Dr. O'DONNELL.—Have you infortion to contrast the reductions given in the County yo on the fixation of first term rents, with the ction on the fixation of first term rents elsewhere reland?—That is what I am quoting.

49208. You are speaking of first term rents?—Yes, entirely; so far.

49209. Mr. BRYCE.—Before you pass from that, does not your argument assume that there was a fixed and settled principle of valuation of land?—Quite so.

49210. But we have evidence from the appeals that that was not the case?—But these are the results of appeals and everything else.

49211. Yes; but once a value is put on it by the Sub-Commissioners it is hard to get over. I mean that is the evidence. If you read Mr. Cherry's book, I think you will see that the evidence is that there has been no fixed principle of valuation at all?—That is so, sir.

49212. And Mr. Bailey's evidence before the Commission, some months ago, showed that, in his opinion at all events, in the poor districts of Ireland, among which Mayo may be considered one, the prices had not been fixed upon the same basis as in the rest of Ireland?—Well, of course, under the Act of 1881 a fair rent is not defined, but I have called your attention to what the gentlemen who were appointed to fix fair rents have to do, and that was that they, "having regard to the interests of the landlord and tenants respectively, and considering all the circumstances of the case, holding and district may determine such fair rent."

49213. I quite agree with that, but I believe that your argument would be a strong one only if it could be shown that the same principles had been acted upon in the poor district as in the rich district?—I can only assume that those gentlemen who were appointed by the Government, men of intelligence and skill in land valuing, took all those circumstances into account, as they were bound to do under the Act of 1881.

49214. Most Rev. Dr. O'DONNELL.—Do you think that in fixing a fair rent in Mayo the Commissioners put some of the rents on reclamation made by the tenants?—Oh, yes.

49215. On the poorer land a lot of reclamation has been done?—Certainly.

49216. How do the first term rents in the county contrast with the Government valuation—are they above the valuation or under it?—I really could not say. I should think they were in or about it. But of course the Government valuation of Mayo is supposed to be very low.

49217. Have the tenants improved on the poor lands?—Of course. The tenants have done an enormous amount of improvement, and they have been allowed for that in the fixing of the rent, and a study of the pink schedule issued in each case would show, and should show, the allowance they have got.

49218. Sir FRANCIS MOWATT.—Those rents are fixed in fact in reference to the circumstances of the tenant?—Quite so. The average reduction for second term rents fixed by all the methods provided by the Land Law Acts from the commencement of the proceedings to the 31st March, 1906, for Ireland is 19·7, whereas the reduction given in Mayo is only 15·5, no less than 4·2 under the average for all Ireland, which is a less reduction than in any county in the

Aug. 28, 1907.

Mr. Thomas Rutledge.

Province of Munster, average reduction 18·1, the nearest being Tipperary, 16·6. A less reduction than in any county in the Province of Connaught, average reduction 17·5; and less than in any county in the Province of Leinster, average reduction 16·8, except Kildare, 14·1, King's, 14·7, and Meath, 13·9.

49219. Pardon me if I interrupt you one moment with reference to the opinion which you have just expressed that the valuation is practically, roughly speaking, in Mayo, about the same as the first term rents?—That is only my own idea.

49220. I may mention that Sir John Barton, the Commissioner of Valuation, who gave evidence before us, was asked this question: "Can you give me the figure for Mayo?" (that is, the relation of the valuation to the first term rents), and he said: "Yes; the valuation in Mayo is 10 per cent. below the first term rents."*

49221. Most Rev. Dr. O'Donnell.—Would not that point to the conclusion that the Commissioners, in fixing rents on improved lands, did not take into account the improvements?—I do not believe the Government valuation has much to say to the value of land as between landlord and tenant. I know of lands set far and away above the Government valuation, which are exceedingly cheap.

49222. Sir Francis Mowatt.—Pardon me for interrupting you. We are glad to know that?—The reduction given in Mayo is a less reduction than in any county in the province of Ulster average reduction 22·7, the nearest being Tyrone, 19·1. Therefore as regards second term rents, it is clearly shown by the return of the result of the proceedings to fix rents, that Mayo properties rank fourth in all Ireland, a less reduction in respect of these rents having only been given in the Counties Kildare, 14·1; King's, 14·7; and Meath, 13·9.

49223. The conclusion I understand that you draw from that is that the reduction having been less is an argument that the rents were not previously higher than elsewhere?—Quite so. The land was let originally cheaper.

49224. And that in consequence, for the money which is now advanced those lands would form a better security than if the reduction had been very considerable, and showed that the original rents were too high. That is your point?—Quite so.

49225. Mr. Sutherland.—May I ask you before you pass from that if it was always the case in the County Mayo that the rents were punctually and regularly paid, and that consequently the security was so good?—Oh, always. The rents were always paid, in my time, punctually and magnificently. Dealing with the same point as to security—secondly, I hand in a return dealing with sales of tenancies in the county, which will show the extraordinarily high prices given by purchasers. (*Hands in Return.*†) The first is 9½ years' purchase, given for a future tenancy, rent £23 3*s.* 6*d.*

49226. Sir John Colomb.—This is a return of the sums given for the occupation interest of tenants on different estates?—Quite so, sir. The second is 19 years' purchase given on a rent of £5 in respect of a future tenancy. These are tenancies, of course, determinable at the landlord's will, subject to a notice to quit.

49227. Most Rev. Dr. O'Donnell.—In the case of a future tenancy which can be so determined is the tenant entitled to compensation?—Oh, certainly, for improvements.

49228. Sir John Colomb.—And also for disturbance?—I do not think so.

49229. A future tenancy?—I do not think so. Certainly for improvements, but not for disturbance.

49230. Mr. O'Kelly.—Is the landlord's rent as secure as it used to be, or more secure?—Certainly, circumstanced as their land is; and, from the returns which I have put in now to the Commissioners, for the past ten years I will prove it up to the hilt. The third is 19 years' purchase of a judicial tenancy; the rent is £6 15*s.* And the fourth is 26½ years' purchase of a judicial first-term tenancy; rent, £3 13*s.*

49231. Most Rev. Dr. O'Donnell.—Has it come under your observation that the smaller the holding the greater the number of years' purchase for tenant right?—Oh, yes; most decidedly.

49232. Is it a fact that there is a land hunger for those small holdings?—Well, the people are very anxious to acquire those small holdings.

49233. And the demand has increased?—They ge enormous prices for them unquestionably. I wi just show you. The next is 40 years' purchase of first-term judicial rent of £1 9*s.* 4*d.* The next 36 years' purchase of a first-term judicial rent £10 16*s.* 6*d.* Now, that is a substantial holding £10 16*s.* 6*d.*, and at 36 years' purchase it fetch £395, not to speak of auctioneer's commission. Th next is 13 years' purchase of a first-term rent of £ 10*s.*, and the next is the most extraordinary of a It is 102½ years' purchase of a tenancy from year t year at a rent of £2, being £205, in addition t auctioneer's commission.

49234. Sir Francis Mowatt.—Perhaps you nee not give the detailed figures in other instances That is sufficient for your case?—Quite so.

49235. I will ask you one or two questions upon that. You hand in a return as illustrating the security of rents in Mayo by showing the high prices paid on the sale of tenancies?—Yes.

49236. I will take the last case, the one in which a man gave 102 years' purchase for a tenancy determinable at the landlord's will?—Yes, sir.

49237. You can hardly put that forward, or do you put it forward, as illustrating the true value of the purchase. Is not it the fact that it must have been bought by some man with some passion for that particular holding altogether irrespective of its real intrinsic value?—It was an extraordinarily high price, of course.

49238. That is what I am saying?—It was a holding without any building on it, and it adjoined the holding that he occupied and lived on.

49239. And no man out of a lunatic asylum would give 102 years' purchase, as a business transaction, and accept that piece of land as a sufficient security for 102 years' purchase?—It shows the competition value of the land apart from the true value; but then the competition value is the market value.

49240. I do not think that is quite as good as it appears to be in support of your argument as to security—to get a single individual to give 102 years' purchase for such a thing?—Well, the next case on the list, you will see, is 83½ years' purchase.

49241. For a tenancy determinable at will. Do you not think that there must have been other considerations actuating that man besides the intrinsic value of the property he acquired?—Well, I do not think there were, sir. I think it was *bona fide* bought in competition. Of course there were other people bidding as well. He was simply declared the purchaser, but there must have been other people bidding as well.

49242. Most Rev. Dr. O'Donnell.—Do you know the details of these two purchases. In what circumstances were these little holdings situated?—They were ordinary small holdings.

49243. In both cases were they bought by small holders who wanted them for the purpose of enlargement?—The one at 102 years' purchase was bought by an adjoining tenant. The one at 83 was bought by a tenant on the property. I do not think his holding adjoined, but it was very near. And it was half a mile from the little town.

49244. This was bought with the man's own money?—All money paid out of his own pocket.

49245. Mr. O'Kelly.—How many acres had the 102 years' purchase man?—He had 7 acres 1 rood 25 perches.

49246. How many acres did he buy?—He bought 9 acres 0 roods 31 perches, in or about the same acreage as the original holding.

49247. Mr. Kavanagh.—Do you put forward the price paid for the tenant's interest as an evidence of the value of land?—I put it forward as showing the value of the security to the State, because when a tenant buys from the State he will not only be buying the tenant's interest, but he will also be buying the landlord's interest; but the State will be securing the tenant's interest as well as the landlord's; so on the point of security they have both interests.

49248. Mr. Sutherland.—I assume that this was a transaction for cash; that there was no borrowing?—No borrowing whatever, sir; cash paid over the table.

49249. Sir John Colomb.—You put forward these

* See Appendix to the Fifth Report of the Commission [Cd. 3650, 1907], p. 23, q. 22533.

† See p. 194.

res of the amounts given for occupation interest show that the security is ample?—Quite so.

9250. And to show that if the annuitant purser fails to discharge his obligation to the State, ıe fails to pay his annuity, there will be no diffi-y whatever on the part of the Government in lizing the security owing to the competition?—ıt is so, sir.

9251. Sir Francis Mowatt.—I think you need dly go on further with that point?—I just wish make a remark upon it.

9252. If you please?—From this I draw the reable inference that the landlord's rent is as secure ınything can well be. If his tenant pays him £5 ear, and the tenant's interest is worth from £100 to 0, is not the security behind the rent almost gilted. The tenant is not likely to forfeit an interest aluable by declining or neglecting to pay such small outgoing as the annual rent. Lastly, on question of present security, I also submit a re-n in connection with some estates over which I as agent. (*Hands in Return*).* This deals with estates entirely situated in congested districts. ı will see from the summary that there are 1,215 ants, and the average gross yearly rent on the regate for ten years was £6,313 4*s.* 7*d.*, being over £5 per tenant per year; and they paid ain the ten years £6,357 2*s.* 11*d.*

9253. The average collection is larger than the itself?—In consequence of the arrears taken in.

9254. If you had not included those arrears, what ld have been the case then?—I will show you e arrears. If you take estate No. 1 you will see ars on that estate on the 1st November, 1895, 5 8*s.* 10*d.* The average rental of that estate for years was £1,097 2*s.* 5*d.*, and the average collec-has been £1,100 12*s.* 5*d.* The average rent paid ach tenant is not quite £4 per year. Now, on 2 estate the average rental is £1,475 3*s.* 2*d.*, and en years the tenants have paid £1,477 17*s.* 10*d.*

9255. Most Rev. Dr. O'Donnell.—Would you be to say that on this estate the rent came out of land, or that in came from America?—Oh, I not say at all. Of course I do not know, but I pretty positive that the rent came from Eng-d, or that the greater part of the rent came from land, because all those estates I am dealing with in a congested district.

9256. And the tenants are migratory labourers? hree-fourths of them.

9257. They and their sons go to England every to look for work?—Three-fourths of them, and he collection of rent in this district 90 per cent. he money you get is in gold, which shows that brought it from England.

9258. Of course that holding is too small to sup-a whole family, and they migrate?—They must rate. They simply have these holdings as tem-ary residences for their families and children.

9259. Mr. Bryce.—If that is so the security of payment is not the value of the land, but certainty that the man that has the land migratory labourer who is determined to go to gland to get the money?—That is so, but you st take into account what his interest is in the king of the land also.

9260. That is only his desire to remain on in the ntry, combined with the desire to go to England get the money?—Well, we must all work or we not get any money.

9261. That is quite true, but I only point out to that it is not the value merely of the land that here *per se*?—It is the value of the land in the lic market unquestionably.

9262. It is not the intrinsic value?—It may not the true value, but it is the competitive value un-stionably.

9263. Mr. Kavanagh.—You say at these extrava-t prices a small holding is always worth a certain ount?—The price in fact shows that every holding worth a certain amount.

9264. But is it enough to make it a good security the annuity purchase price put upon it?—A per-ly good security.

9265. Most Rev. Dr. O'Donnell.—I quite agree h you that the small holder meets his obligations h marvellous punctuality, but if by any chance outlet for those men in England were to fail, you think they would have that regard for punctuality?—I cannot say; but I say that possibly if that field were closed, something else would open for them. Now, on No. 3 estate the average rental for ten years was £651 1*s.* 3*d.* The tenants paid £670 17*s.* 5*d.*

49266. Sir Francis Mowatt.—We take these samples, and I think you need not go on with that?—The sum received shows the result.

49267. Sir John Colomb.—You hand this in?—Yes.

49268. Sir Francis Mowatt.—Might I ask you a single question on that. Are they still paying off arrears?—Oh, yes, of course they are. They are practically all the hanging gale in arrear. I have handed in a return showing the annual rent accrued, and the number of tenants and amount of rent discharged for the past ten years; and, as the return will show, the punctual payment of rent on these estates speaks volumes for the integrity of the tenants and the excellence of the security.

49269. Sir Francis Mowatt.—The integrity of the tenants is an excellent security?—Quite so, sir. I also hand in a return† taken from the Blue Book according to the various rural districts in the county, dealing with untenanted lands upon estates over which I act as agent, and the owners of these lands are perfectly satisfied to dispose of these, together with the tenanted lands which they own, provided they are given a price which will produce a capital sum, plus expenses of sale, 5 per cent. on the gross purchase money, which, when invested at 3½ per cent. interest, would produce their present net income.

49270. Is the 5 per cent. on the gross purchase money the expenses of the sale?—That would be a fair estimate.

49271. They would accept a capital sum which invested at 3½ per cent. would produce their present net income, plus 5 per cent.?—No, sir; the 5 per cent. must be deducted from the entire capital for the costs of the sale.

49272. Put in another form, it means, does it not, that they will accept a capital sum which at 3½ per cent. would produce their net income, including in their gross income 5 per cent. on the purchase money?—That would be another way of putting it.

49273. Mr. Bryce.—The plus and minus always produce confusion. Can you give us actually the sum of money. Give us a concrete case—a hypothetical case?—Yes. If an owner sold an estate realising £100,000 he would really get £95,000 of that, because the costs of sale would be £5,000.

49274. Mr. O'Kelly.—What about the bonus on the £100,000?—The bonus is after that. I am taking the ordinary purchase money of the estate. He would of course get the bonus on the £100,000.

49275. Sir John Colomb.—What you mean, Mr. Rutledge, is, I think, this, that the landlord is willing to sell, provided that when the transaction is completed and all expenses paid, the capital sum remaining should be an amount which invested at 3½ per cent. would yield the landlord the net income that he had before the sale?—That is so.

49276. Sir Francis Mowatt.—And, that being so, any bonus in addition?—Ah, no; I am not including the bonus, of course. I do not mean that a man should get his net income and the bonus as well. I would add the bonus, of course, to the purchase money of the estate, and then take 5 per cent. off for the expenses of the sale, and then give him the capital sum.

49277. Mr. O'Kelly.—You have sold estates?—I have sold a few—yes.

49278. Did you arrive at a price that would secure the landlord's net income?—I tried to.

49279. Would not the only way be to have the books of the landlord submitted to the Estates Commissioners or the Congested Districts Board?—That is practically always done.

49280. Did you submit them?—I submitted everything I was asked for.

49281. Sir John Colomb.—With reference to that, let me understand. In your judgment, there would be no difficulty or objection raised by landlords to the production of their books by the purchasing authority who have the money to pay?—Not the smallest in the world. Why should there be?

49282. Mr. O'Kelly.—Do you know that objection was taken to that course?—I never did. I certainly would not take it, and none of my clients would either, as far as I know.

* See p. 194.
† See p. 195.

Aug. 28, 1907.

Mr. Thomas Rutledge.

49283. Most Rev. Dr. O'Donnell.—Would that be the same as giving an account of the net income for which the Income Tax is paid?—Oh, no, Income Tax should be assessed on the Government valuation, less one-eighth deducted under the Finance Acts.

49284. Sir Francis Mowatt.—How about an estate held in mortgage, and as to which the interest payable on the mortgage is more than 3½ per cent. The course adopted, as I understand, in such a case as that would be that the price put down there to secure the net income would not include deduction of interest on the mortgage?—No, sir. Mortgages are a personal matter between the landlord and his creditors.

49285. That is quite true; but when you are making up to the landlord the loss of his net income, and all those mortgages have affected his net income from the estate, on what ground would you except the mortgages in the calculation. I only want to know for information?—If you took the interest on mortgages into the calculation a very great amount of confusion would arise where a man had mortgaged his life estate. There would be danger of very cruel injustice to the remainder-man in the settlement.

49286. It is the fact, is it not, that where a man is paying 5 per cent. interest on a mortgage, and he agrees to pay off that mortgage he saves on the 5 per cent. interest, and if you calculate the 3½ per cent. interest without taking that into consideration, it appears to me that you are over-estimating the actual net receipt by the difference between 3½ per cent. and the amount paid on the mortgage. I quite admit that it is a personal matter with his creditors, but when you are making up to the landlord for the total loss on the transaction that interest really becomes an important calculation. I do not say that there are not difficulties in the way?—That is perfectly correct as regards the mortgage on the fee of an estate, but there must be a distinction between the mortgage on the fee of an estate and the mortgage on a life estate. If you reduce the net income by including the interest on the mortgage on a life estate, including the premium on the policy of assurance, it is absolute ruin to the remainder-man.

49287. Mr. Bryce.—Do you include in those charges, beyond the deduction which you say should be made, arrears; that is to say, do you look back to that debt when in the course of so many years the landlord may fairly consider he cannot get the arrears?—Oh, of course any arrears of rent are a personal debt if he is tenant for life of the estate—actually a personal debt due to him.

49288. But do you include the fact of arrears in this deduction—do you deduct a sum representing arrears from the annual income?—No sir; I deal with the arrears as money due to him, and leave them there; they must be either paid or added to the purchase money.

49289. I only wanted to know what your practice was. You would not deduct arrears of rent in calculating the capital value of an estate?—You know they are a personal debt due to the tenant for life of the property, or the owner in fee, as the case may be.

49290. Are not they a very considerable element in the present position of affairs all over Ireland?—Oh, I do not see much difficulty about arrears.

49291. Perhaps you do not here in Mayo, but there are other parts of Ireland in which arrears are very serious, and in which it is supposed, and I think with justice, that the high prices which undoubtedly prevail since the passing of the Act of 1903 are accounted for by the fact that the arrears are being added to the purchase money?—I have never added more than a year. In several cases I have added one year.

49292. Mr. Kavanagh.—Have you ever heard of more than one year being added to the price?—On no estate that I had anything to say to, sir.

49293. But in arriving at the net income?—In very special cases I have added a year.

49294. But in arriving at net income, would not a landlord have to show the average receipts of rent within the last so many years?—Yes; say ten years. That would be very fair.

49295. So that therefore the arrears really would disappear, and you would only be entitled to consider his net income as far as it has been collected?—Quite so, as far as getting at the capital sum, but still the arrears would be his.

Mr. Bryce.—That is just the question that I put to Mr. Rutledge, to which he gave a different answer. I understood him to say that in calculating the net income he took the gross rent, irrespective of whether it was actually paid or not.

Mr. Kavanagh.—Oh, I think not. In arriving at an estimate surely on the average of the last so many years.

49298. Mr. Bryce.—As a matter of fact, what is it? Do you do as Mr. Kavanagh has stated, or as you said in answer to me. Do you take the full, that is the gross, rent, or only what the landlord has actually received?—In arriving at the capital sum I of course take the full year's rent.

49299. Not what he has actually received, but on the average of years?—Oh, certainly not; the full year's rent.

49300. Mr. Kavanagh.—But you cannot take the gross rent as the net?—Well, the rental must be ascertained first, and from the gross rental you must of course deduct to get at the net.

49301. Sir Francis Mowatt.—But let me take an extreme case. A landlord's gross rental is £1,000, I suppose. During the last ten years the actual sum paid is £500, and there are £500 of arrears not paid. Which of those two sums would you take in calculating the capital sum to be paid?—I could not imagine such a case.

49302. I purposely put an extreme case in order to determine the principle?—Of course the capital value would be on the £1,000.

That you would call net income, though he never got it?

49304. Sir John Colomb.—He uses this expression—"By net income I mean the profits of the lands to the owners in ordinary cases"?—Yes, sir.

49305. Do you mean profits made or inclusive of liabilities due?—I mean net profits after paying all expenses charged upon the land.

49306. Not what the landlord has not received?—Certainly not.

49307. Sir Francis Mowatt.—I put it to you again and again I take this absurd figure to illustrate the principle. The actual receipts during ten years are £500 and the rent is £1,000?—Yes.

49308. But the actual sum received is £500, and £500 a year remains in arrears over that property for ten years. Do you consider the net profit to be the £1,000 or the £500?—The net profits would not be £1,000, of course, because from that you must deduct Income Tax and all other Government charges which he has to pay—tithe-rentcharge, head rent, general rent, and annuities—all those things. If he does not choose to collect his £1,000 a year that is a matter for himself. Why should his successor in the property pay that?—As a rule he has only a life interest in the estate.

49309. Yes, but I think you propose to calculate the capital sum, not on the net income of the successor but on the net income of the actual landlord, as I understand, and the net income of the landlord in the case I have given you would be £500 a year, less expenses of collection, and not £1,000. I want to know which of those two sums is, in your mind, the net income?—I really could not imagine such a case, sir.

49310. Then, to meet your views, we will put it down as £750?—I could not imagine such a case. I could hardly imagine a man with £1,000 a year only receiving on an average of ten years £750.

49311. Let us just assume that the rent is £1,000 gross. Let us assume, very liberally that the actual amount received is £999. Should the calculation be made upon the £1,000, less expenses, or upon the £999, less expenses?—I think in that case I would not trouble with either. I should be quite satisfied whichever I got.

49312. Then we will put it back. It is of so much importance that I want to make this clear. We will put it back to whatever you think is possible, say £1,000 and £900. Would you take the £1,000 or the £900 for the purpose of your calculation?—I would take it on the net receipts, the net receipts as I define them here.

49313. Most Rev. Dr. O'Donnell.—I think you will be able to answer Sir Francis Mowatt, our Chairman, more fully if you address yourself to this question for a moment. When you speak of net income in

something less than the gross income?—Of course
s.
9314. It is less by two things—first the expenses of
ection, and, secondly, the uncollected rents, or is
less by only one of those things?—It is less, in
opinion by only one of them.
9315. Mr. Bryce.—Now, I want to illustrate this
the case of the Dillon Estate, in the east part of
s county. By the way, it does not quite carry out
r ideas about the value of security in Mayo,
ause the Dillon Estate, which was bought by the
igested Districts Board a few years ago, had a
ss rental of £20,000 a year; but the net rental
ceived by the landlord was only £16,000 a year;
t is to say that out of every £100 he only received
ut £80. Now, in that case, supposing it was a
e of purchasing this estate now, and of giving the
dlord 3½ per cent. for net income, would you take
£20,000 or the £16,000? It was in arrears and
net receipts of the landlord were only £16,000.
ould you take the £20,000 or the £16,000?—If you
k the £16,000 in what position would you be leaving
remainder-man.
9316. I did not ask you that, but how you would
culate it?—I would calculate it on the gross.
9317. On the £20,000?—Certainly, sir, because, if
, you punish the remainder-man for the default of
present owner.
9318. Sir Francis Mowatt.—At all events, that is
at we wanted to get at. It is on the gross rent?—
allowance made for rents not collected.
9319. Sir John Colomb.—It is a very important
nt indeed. Mr. Rutledge, in view of your answer
t the purchase money should be arranged on the
is of the net income, would the net income in your
id include arrears?—No.
9320. That is what I wanted to know?—No; I
e said all along that arrears are a personal matter
gether between the landlord and the tenant. They
uld not be brought into the value of the estate.
9321. Sir Francis Mowatt.—It may be my
pidity, but the transaction must be a clean trans-
ion, and when the Government purchase these
ds with the view of carrying out a State policy, they
leave no liability due to the landlord from any
the tenants?—That is so, sir.
9322. Then, if these arrears can be dealt with in
way you describe, it appears to me that it would
ve a large liability on the tenants to the landlord
er the transfer is made. How do you propose to
l with that?—No; the moment the tenant signs
purchase agreement with the landlord the arrears
gone. They must be settled before the purchase
eement is signed. Afterwards the Act of Parlia-
nt cancels them. As long as the purchase agree-
nt is pending he can never sue the tenant for rent.
net income I mean the profits of the lands to the
ners in ordinary cases, after allowing for purely
ate outgoings, namely, poor rate, head rent, tithe
t-charge, and other Government charges, together
h expenses of management, that is, his net income,
l of course out of the purchase money he would
ve to be given a capital sum to pay off those
arges, and this considering that in selling their
tenanted lands they are disposing not alone of their
esent net income out of such lands, but are also
rting with their occupation interest, which,
hough of immense value, they are getting nothing
. For instance, they might have sold their occupa-
n interest in these lands, creating tenancies since
e passing of the Land Act, 1881, and accepting large
ns of money as fines for the creation of such
ancies, and still retaining their present net income.
erefore, in being willing to sell on the terms men-
ned they cannot be considered unreasonable. Nor
ve I referred to the loss of proprietorial rights or
timental loss of prestige. If the Department
cide to let grass lands acquired by them to tenants
a lesser figure than will recoup the expenditure in
quiring such lands, I have no objection, but the
ate, in doing this beneficial work, must bridge over
e difference. See Mr. Stuart's evidence, questions
630 and 17729*, as to letting parcels of land 15
r cent. under a fair rent, and that he considers them
od bargains.
49323. Mr. O'Kelly.—Would the bonus bridge over
e difference?—The bonus would not bridge over the
fference in this case.
49324. Sir John Colomb.—As a matter of fact, in
ference to that question, is it not a fact that the
bonus is eaten into, and in some cases entirely absorbed by the legal expenses?—I believe so, sir. I have no knowledge of it personally; but I have heard it, and I know the greater part of it is. The position may be thus stated. A landlord receives £100 a year for a grass farm, net, after meeting all estate outgoings. The State acquires it, and in order to carry out a policy of amelioration for the benefit of the poorer classes, lets it in parcels to occupiers, who pay £80 a year. Is the landlord who acquiesces in the policy in so far as he voluntarily surrenders his grass land, to bear the deficit? Is he to be compensated on the basis of an income of £80 a year only? I submit no argument based on equitable principles can be adduced in favour of such a suggestion.

49325. Sir Francis Mowatt.—But when you say he voluntarily surrenders it, he does so for its full value?—We do not consider that he does, because he gets nothing for his occupation interest. He has two interests.

49326. But he is getting his net income?—But he might have increased his net income considerably, as I point out, as he might have let all this land in holdings.

49327. Sir John Colomb.—Mr. Rutledge, is it or is it not the fact that it is a matter of extreme difficulty in some cases for any landlord to estimate or to prove his net income derived from untenanted grass land?—Oh, that, of course, would be a matter of great difficulty, but on the estates which I am looking after I have none of that.

49328. But it is recognised that there are many cases in Ireland in which there is that extreme difficulty?—Of course in the broad sense untenanted land might include land which is left for a temporary purpose unoccupied.

49329. Most Rev. Dr. O'Donnell.—In the possibility which you contemplate of an owner of grass land dividing it into holdings and selling them by auction or other competition, what would happen those holdings? Would those who bought them remain tenants of the owner?—Yes; they would, of course.

49330. Do you think it would be possible for an owner to do that at present. Do you think would the public submit to that class of competition?—On that, of course, my lord, I could not express an opinion. I dare say they would not.

49331. On the other hand, you do not think that public policy would tend in the direction of the State advancing public money at 2¾ per cent. to enable an owner to improve his income by that class of transaction?—Possibly not; but since 1881 I have known instances of where owners have broken up grass farms and let them in small divisions to their tenants adjoining. In fact they were carrying out the present idea.

49332. Of breaking up the land?—Of breaking up the land. To their own adjoining tenants.

49333. I do not take you as recommending this at all, but you are merely stating the possibility of it?—But it has happened. It has been done.

49334. I am aware that it has been done, but you do not contemplate the owners trying that class of thing on anything like a large scale?—Oh, no; I do not. They never did. Personally, my own view is that it was a great mistake that they did not.

49335. Is this your view, that it would have been a good thing if owners had taken grass lands and split them up and given them on equitable terms to occupiers?—Most certainly, my lord. I do not think there is much doubt about that. Ireland already contributes much more than her share of taxation for Imperial purposes, as found by a Royal Commission, and I am of opinion, and with great confidence suggest, that the Imperial Exchequer should fill the gap in every case where the lands are not re-let, at a figure sufficient to recoup the Departments. I concur in the view expressed by Colonel Saunders Knox-Gore in his evidence before the Commission at Crossmolina, that the constitution of the Congested Districts Board should be altered by vesting in the Board power to act from day to day without having to resort to the trouble and delay of convening meetings.

49336. Sir Francis Mowatt.—Just let me ask you a question upon that, to understand you. How can you contemplate a Board acting from day to day without meeting?—They must meet, of course, to act.

* See Appendix to the Third Report of the Commission [Cd. 3414, 1907], pp. 227 and 230.

Aug. 28, 1907.

Mr. Thomas Rutledge.

49337. But you suggest that the Board should act from day to day without having to resort to the trouble and delay of convening meetings?—Because at present, I understand, they only meet twice a month.

49338. And would you have them meet from day to day?—Of course; if necessary, they should.

49339. But you do not express that. What you wish is that the meetings of the Board should be very much more frequent?—Quite so.

49340. Mr. KAVANAGH.—Could you expect that from an unpaid Board?—I think the gentlemen forming the Board should be called to meet from day to day if they can do any good to the country, which undoubtedly they are doing.

49341. You are speaking of meetings all the year round?—Meetings whenever necessary.

49342. Mr. SUTHERLAND.—And pointing out at the same time that they should be representative of the various districts?—I would not object to that.

49343. That is what Colonel Knox-Gore said?—Yes.

49344. Sir FRANCIS MOWATT.—I am afraid you could not expect them to live in Dublin all the year round, away from their homes, to attend meetings. Is that what you suggest—that the Board should be formed in such a way that they might meet in the various counties?—Well, they might have Departments dealing with each county. I think that would be a far better system, if they had meetings of the men dealing with the counties.

49345. Mr. SUTHERLAND.—I think there is considerable confusion between two ideas in the proposals made?—Possibly there may be.

49346. Sir JOHN COLOMB.—You say the constitution of the Board should be altered; but, as I understand you, when you say to meet from day to day, you mean to meet frequently?—Yes; I would not object to either.

49347. Would that alter the constitution?—It would be reforming the Board.

49348. Well, the Board is now a nominated body. Do you mean to imply, by altering the constitution, an alteration of that principle?—Of the meetings?

49349. No. What I mean is that the Board, as now constituted, consists of nominated members. You used the phrase "altering the constitution of the Board." When you say that do you mean a departure from the principle of nominating the members?—Oh, no; I do not go so far as that.

49350. Mr. O'KELLY.—What constitution for the Congested Districts Board do you suggest?—I really have not thought that matter out, Mr. O'Kelly, beyond saying that in my opinion I think it would be a good thing if the powers of the Board were extended.

49351. You suggest certain changes in the constitution of the Board by vesting in the Board the power to act from day to day. Suppose there were a representative body composed, as the Congested Districts Board is, of unpaid members, how could it act from day to day?—They might act through a Committee.

49352. What kind of a Committee?—A Committee of their own body. Of course I see a difficulty about not being paid. Of course they should be paid.

49352A. Do you not see that your argument would, logically, lead to the dissolving of the Congested Districts Board?—I hope not.

49353. Why do you say that?—Because I would wish the Board to continue, and act independent of all parties.

49354. How do you mean independent of all parties?—They are at present quite independent of the Estates Commissioners and the Land Commissioners.

49355. How could you expect an unpaid body like the Congested Districts Board to maintain continuous supervision over the work in which they are engaged?—I should pay them. I should, most decidedly, pay them.

49356. Suppose you paid his Lordship the Bishop, he could not attend there from day to day?—He could not attend from day to day, but still he would be able to attend oftener than he does at present. And then the other members of the Board should have power to act.

49356A. Most Rev. Dr. O'DONNELL.—It is very good of you to say that, Mr. Rutledge, but I am afraid I am pledged to unpaid poverty?—I hope my lord.

49357. Sir JOHN COLOMB.—You have had busi to do with the Congested Districts Board?—Yes.

49358. Now, can you mention any concrete case the Commission of expense, trouble, and delay any business transaction you had with the Board, to the fact that they only meet twice a month There appears to be considerable delay in deal with them.

49359. Pardon me. I asked you for a conc case. Have you any such case?—No, I have no

49360. In any transactions that you had with Board, can you give, from your own knowledge concrete case where delay and trouble have b caused by the fact of only meeting twice a month I cannot give a concrete case.

49361. Mr. O'KELLY.—What kind of Conges Districts Board would you like to see establish It is quite palpable that the present Congested I tricts Board cannot give that daily supervision wh you would like to see. What kind of Board wo you like to see established?—Oh, representative r from each county. I hope to have the pleasure seeing you there some day.

49362. But by whom would you like to see th men appointed?—Of course they must be appoin by the men who appointed you as Chairman of County Council. I should not object.

49363. Do you mean an elective body?—A spri ling. I do not say they all should be; but a spri ling; a strengthening of the Board.

49364. Do you not think that if so, if the count were to appoint representatives, and that those presentatives were not successful in securing bene for their country, then, when the time for re-appoi ing and re-election came along they would not appointed again?—That would be the fortune war. There are ups and downs in the world, a you must always go up and down.

49365. And after a couple of years, when the m had acquired a knowledge of the work of the Co gested Districts Board, they might be removed? Possibly they might.

49366. Do you not think that would be unavoi able?—No. Apparently it would not work well that happened, but I really do not think it wou happen. I approve of the Board, and think th should be maintained as an independent body, a that far more money ought to be placed at the disposal to enable them to continue the admirab work they have done and are at present doing; a I would also suggest that the Government shou undertake a large scheme of arterial drainage in t county, which would be of immense importance, a also that the sea fisheries on the coast should be fu ther assisted by an extension of the existing railwa system and the building of other piers for the pr tection of the fishing boats.

49367. Sir FRANCIS MOWATT.—When you say th far more money should be put at their disposal, d you mean by the Exchequer or locally?—By t Exchequer, certainly. The landlords have paid the share of taxation, and a Commission has reporte that Ireland has overpaid something abo £2,000,000 a year. I think it is quite time should get some of it back.

49368. Mr. O'KELLY.—Would you kindly tell m what are your reasons for suggesting that the Co gested Districts Board should be maintained?—Loo at the magnificent work they have done in th country ever since their establishment. There a living monuments all over the country of the sple did work they have done. I cannot see that an thing possibly could be better. Why change the when they have done so much beautiful work.

49369. I quite agree, but I thought you suggeste that they should be changed?—I did not make th suggestion.

49370. Have you any knowledge of the work of th Estates Commissioners?—I have knowledge of th work done by the Congested Districts Board.

49371. Do you know the work done by the Estat Commissioners on the Clanmorris Estate?—I hav seen it, but have not inspected it.

49372. But you would not suggest that the Estat Commissioners would be less competent or capabl than the Congested Districts Board?—Oh, no; would not make any suggestion at all.

373. Then why should they not do the work?—I already answered that question by referring to magnificent work the Congested Districts Board done. "Why swop horses when you are cross- stream" is an old saying.

374. Most Rev. Dr. O'Donnell.—There is one ion I want to ask you. You recommend age as very necessary?—Yes; most necessary.

375. Are you in the habit of tilling much elf?—No, my lord.

376. Do you know something about drainage?— my lord.

377. Is it your opinion that under a good system rainage the yield of those very small farms t be considerably increased?—Undoubtedly it l be increased, but whether it would be increased e benefit of the parties doing the work is an- matter, because tillage has failed in Mayo.

378. Sir John Colomb.—Do you mean that d farming has failed?—There have been many ples of large men that farmed in Mayo, and have all gone.

379. Do you say that mixed farming has failed ayo?—Oh, no; I mean the practice of tillage large scale. There were several men, well-known who started it here.

380. Most Rev. Dr. O'Donnell.—You do not tillage on a small scale?—No. Tillage on a scale has been tried in Mayo, and failed to ed.

381. Mr. O'Kelly.—One question. I put this to you. Do you think it possible to solve the m of congestion within a reasonable time with- he exercise of compulsory powers?—I think it

382. How do you show that?—Well, it is all a ion of money.

383. Do you think that the landlords of the y Mayo would be willing to accept a certain or their grass lands which at 3½ per cent. would hem their net income?—I am certain that every rd in Mayo that I know will dispose of his rty on those terms, and I have spoken to many m.

384. Which do you think is the greater evil, the f congestion or the counter-evil of compulsion? ll, I am not in favour of compulsion at all.

385. Why?—I think compulsion is unnecessary; and if you compel a man, particularly an Irishman, to do anything against his will he is never satisfied. *Aug.* 28, 1907. Mr. Thomas Rutledge.

49386. But compulsion is not new. It is not a novelty. We have compulsion, for instance, in regard to the taking of land for railways?—But those are comparatively small things.

49387. Do you think it a small thing to take up land from a man?—A railway running through a man's holding will not take away much of it, and he gets an enormous price. The occupier will get paid, and the landlord will get paid, and everybody will get paid.

49388. Can you explain to me, as showing the necessity for compulsion, the interference of Mr. Goode and Mr. Black, in regard to the Clanmorris property?—I do not understand what you mean. There was no interference on their part. Besides, I really cannot go into this question now.

49389. Sir John Colomb.—With reference to the question of which you consider the greater evil, surely your position is that if the price offered to the landlords be a price which, if it were invested as a capital sum at 3½ per cent., would give them their net income there would be no necessity for compulsion?—That is so, sir.

49390. Mr. O'Kelly.—Arising out of Sir John's question and the answer you have given, may I point to the case that has been mentioned, of taking in the first instance a fine of ten years' purchase and then afterwards selling under the Land Act of 1903?—I really do not know anything about it. It is not on the estate I manage.

49391. Might I suggest that your view would be modified, assuming that what I say is correct?—But I don't know anything about it.

49392. But supposing that my view is correct?—Oh, I really will not deal with the question at all, because it is a matter that I know nothing at all about.

49393. I am suggesting to you the assumption that my view is correct, and you decline to consider it?—Why not; why should I not; because if I happened to be agent over the Crannagh farm——

49394. And then you do know something about it?—I know nothing except what you say. Whether the state of things arose which you say did arise is a different matter altogether; but it should never have arisen.

Very Rev. Canon Lyons examined.

395. Sir Francis Mowatt.—You have been nated by the Archbishop of Tuam?—Yes, for this ry.

396. You are resident where?—In Castlebar.

397. You have not a precis of the evidence which propose to give?—No. Without being in any disrespectful to this Commission, I wish to that there is a general want of confidence in oyal Commissions. In the first place, we have o many Commissions without any result. We he Royal Commission on Financial Relations, sed of financial experts, and their re- has not been acted upon. There has been gislation. The next Commission is the Viceregal ission on Poor Law, and the report has not been upon, and there is no legislation. We have had ly two Royal Commissions on the University ion, and there is no legislation, and no hope of ation. The people say—"What chance have we gislation from this Royal Commission?" How- this may be an exception.

398. You are rather suggesting that we should tinue our sittings?—Oh no, I am not, but there confidence in Commissions.

399. Mr. Sutherland.—There has been no legis- ?—I say there have been Commissions with no at all.

400. Most Rev. Dr. O'Donnell.—I think the was going to put in an "however"?—How- I think it is only fair to give a chance to this ission.

401. Sir Francis Mowatt.—Of which we shall ourselves?—A Unionist Government established ongested Districts Board about fifteen years ago, pose, and, as usual, financed it miserably. It een working up to the present hour throughout untry, and I daresay it is doing splendid work, but it has not satisfied the country. It does not satisfy the people. I have in this parish eighty new houses, built on untenanted land striped by the Congested Districts Board, and outside their mearings you have people in a state of congestion looking on, quite dissatisfied with their condition, as compared with that of their neighbours, and I do not see what necessity there is for further evidence about congestion. It is quite evident to everybody, and if this Commission take the trouble to walk for twenty minutes near this town, they will come to a state of congestion such as could not be found in Korea. Very Rev. Canon Lyons.

49402. I believe it is bad in Korea?—Yes. The Congested Districts Board has this estate now in hands, working it for the last two years—draining, building houses, and fencing—improving the houses rather; and some of those tenants have their patches of land—£3 worth, in twenty patches. Mr. Doran saw this state of things. About £3 is the average value—the average rental of these poor people. The tenant himself has to go to England to earn the rent and support his wife and children.

49403. Most Rev. Dr. O'Donnell.—You say that it is not striped?—No.

49404. Sir Francis Mowatt.—The patches here and there which have been purchased by the Board appear to be 280,000 acres?—But Mayo is a large county.

49405. That is a beginning?—But when will it be ended. Since this Commission began its sittings last September, 40,000 people have left the country, and when you have your report made I suppose 40,000 more will be gone, and when you have legislation on the report there will be 40,000 more, and that is 120,000 gone, and the Act passed will probably require five years to amend, and you will have 200,000 people gone. That is the way legislation is made for Ireland.

Aug. 28, 1907.

Very Rev. Canon Lyons.

In fact the country is bleeding to death, and unless there is a remedy applied soon it will be bled white.

49406. Most Rev. Dr. O'Donnell.—The point you are putting is that the Congested Districts Board should be more and more urged to go on with the work of migration?—Exactly. I have congested estates in this parish without untenanted land, I have estates with tenanted land and with untenanted land also, but the landlord will not sell. One who has tenants with uneconomic holdings and grass land adjoining, immediately outside, would not sell on any account; and there is another estate very congested which has no untenanted land on it, and the landlord will not sell because he is getting twice the rent on an extensive tract of bog he has. What can be done with him? Then there is, on the other side of the parish, convenient to me, there is an estate where half is congested and the remaining portion is untenanted land—grazing land. That is Sir Henry Blosse's estate, and he is prepared to sell at a reasonable price.

49407. You are aware that he is negotiating with the Congested Districts Board?—Yes.

49407A. And you are aware that there is a difficulty on the score of money in conducting the negotiations?—Yes.

49408. Will you tell the Commission something about that portion?—That portion is a very fine property. There is very little congestion on it. I do not think there is any congestion on it at all. I don't think there is much; there are holdings of £5 and £6, and £10 and £15. I do not call that congestion. But then he has untenanted land—three or four thousand acres, which he is prepared to hand over to the Board.

49409. Do you not think it would be a great pity, if there was a sale of that estate, not to have it sold to an improving body?—I think it would be a great pity, because we have before our eyes the results of the Congested Districts Board. We are all proud of their work, and it is admired by strangers coming into the country, as we know, and going about.

49410. If that property were sold to the Congested Districts Board or to the Estates Commissioners direct they could use the untenanted land for migration purposes?—Certainly.

49411. Mr. O'Kelly.—You said something about strangers coming in?—I am speaking of visitors from America and England coming here and going round the country.

49412. Where would your preference lie, in favour of the Congested Districts Board or of the Estates Commissioners?—I do not wish to distinguish between them at all. I am quite satisfied with any Board which is working like the Congested Districts Board. And I would suggest also that whatever body it may be that does the work, whether the Estates Commissioners or the Congested Districts Board, the Agriculture Department should be represented, because now, when the land is transferred from the landlords to the tenants, is the time to set about establishing agricultural schools to teach the people to take out of the land what is in it.

49413. Would not you approve of this suggestion, that on any estate about to be sold the tenants ought to be consulted?—In the past I do not know what has happened; but the tenants seem satisfied.

49414. My suggestion is this. Suppose that Sir Henry Blosse sells his property to the Congested Districts Board, do you not think that before the negotiations are completed the tenants ought to be taken into account, and that the terms ought to be submitted to them, and that they should have a voice?—Would they be judges?

49415. I am not suggesting that?—I only want to know from you would they be judging themselves in the case. I mean to say would they be able to judge what the price should be?

49416. Of course?—Well, I do not know.

49417. I am merely putting this plain question, and I will take yes or no. Do you not think that if the Congested Districts Board wished to purchase Sir Henry Blosse's estate the tenants themselves ought to have a voice in the matter?—Certainly; but we have so much confusion at meetings of that kind that it would be really better to consult them in some way besides at public meetings.

49418. Still that is the only channel by which the people can be consulted?—Oh, you could easily d cuss it with them in their villages, but if you br them together it is very easy to put them off right track.

49419. Most Rev. Dr. O'Donnell.—You say t whatever means are taken, in some way or ot they ought to know what the terms are?—Certain

49420. Mr. O'Kelly.—That is my point?—C tainly. Why not?

49421. And I suggest to you that in the nego tions as between the Congested Districts Board a the Estates Commissioners the people ought to consulted?—Certainly.

49422. And that if the people wished to t through another improving body, such as the Esta Commissioners, do you not think that if that w the wish of the people it ought to prevail?—I wo prefer to have a simple form of transfer of land this country. I would have compulsion in the fi place. It is all very well to hold meetings. know meetings end in confusion and no settleme I would give the landlords their net income, a compel them to sell, but I would impose on the ten only what he is able to pay, and the State shou out of the over-taxation of three millions a ye pay the difference between what the tenant wo pay and what the landlord should get. That wo simplify the matter.

49423. Suppose the tenants said "We wish Estates Commissioners to buy the property, and the Congested Districts Board"?—If there is cong tion to be relieved the Congested Districts Bo should buy untenanted land, and get the untenan land in preference to the Estates Commissioners, a let the Estates Commissioners buy in Cork or Li rick, or the midland counties, where there is congestion. The Estates Commissioners have done anything on the Clanmorris Estate. I h seen it, and they had do nothing at all there. So time since they had not striped it. They have o marked out in the middle of a field, by digging u sod. No fences built, no houses built, and endl confusion, and they are quarrelling and fighting, a at Petty Sessions every other day.

49424. Father O'Malley told me they have fen on it?—I saw the Mayo Abbey portion of the est recently, and it is not very far from Claremorr and I have been told by an official of a number trespasses. I do not mind what body at all p chases the land, provided the transfer takes pl quickly and the tenants pay only what the land worth.

49425. Sir Francis Mowatt.—You would like see the work done?—Yes, by some means or anothe

49426. You say that the Congested Districts Bo should have compulsory power to purchase the la and should distribute it promptly, if not immediate and that the question of congestion should be de with and finished at once?—At once. There is use at all in putting it off.

49427. Mr. Bryce.—You recognise that an unlimi settlement of that kind must take time?—An limited settlement, yes.

49428. That is to say, any settlement of the ki must take time. Do you not recognise that there m not be perhaps a sufficient number of peo sufficiently experienced in the question to carry the whole of that settlement in a very short time I think it could be carried out in a few years. Wh the Board want is more power and more money. T people are sick hoping; they are leaving the coun in despair. Unless there is some remedy applied once I do not see any hope for the country.

49429. Do you not recognise that they could not it all at once?—I do.

49430. Even if there was existing perhaps at t moment a sufficient number of experienced people carry out this universal transaction, it could not done at once?—It has got to be done. If the whole Connaught was purchased out by any authority t people would be satisfied to wait till the work is do and we have the untenanted lands divided, and th will not be flying out of the country.

49431. And that this promise would at once s emigration?—Yes. Well it would stop it as far it is possible to stop it.

49432. Sir John Colomb.—Is it the young men a young women that go?—Yes. Well, sir, it is o the very old and the very young that remain in

try, and I am afraid that your remedial legisla- is too late.

433. Do you consider that the enlargement of the er's or mother's holding will have the effect of ing the younger members at home?—I do not. I say can be done at all is that when you have led the land into holdings of 25 or 30 acres a nt may educate his children and give the land to eldest son, or one son, and scrape a fortune for laughter, and the others must leave. There is ing else for them, as far as I can see, owing to conditions of life.

434. Suppose you divide it up do you consider the land would be so largely tilled that it would employment and induce them to remain at e?—The price of produce is such that you could do it. You must change the laws. Since Free le was passed up to the present time the popu- n of Ireland is going down. The price of oats uced in the county forty years ago was 8*s.* or 9*s.* now only 4*s.* This is only the fringe of the ques- This problem you have is only a small g. As far as I can see the only way to govern nd is that she should govern herself or be rned as a Crown colony. Every country in pe is increasing in population except Ireland. is not the result of good government.

435. Most Rev. Dr. O'Donnell.—Now you know o just as well as others?—I do.

436. You know in a rough way, do you not, the nt of grass land that is available for migration enlargement of holdings?—Well, in this district are 3,000 acres in Mayo Abbey, the greater on in Carnacon parish, a couple of thou- acres. In the parish of Turlough there is not so , but there is, convenient to it, a very large , and Turlough parish is congested. If a num- f estates could be purchased in a district there d be no need to bring migrants from a distance.

437. This was owing to the fact that the Board not deal with the aggregate. It was compelled ing in congests from a distance?—And the people very much dissatisfied.

438. You consider, do you, that it should relieve stion in the neighbourhood?—Yes.

439. Do you think that the amount of grass land e County Mayo would go a great way to relieve congestion?—I am satisfied it would. You in the barony of Kilmaine a large territory of lands, as also in the plains of Mayo. You have y in every parish an amount of grass land that d relieve nearly all the congestion.

440. I gather from some of your remarks that you d rather like to migrate people to land, the acter of which they were in some way before inted with?—Yes.

441. You would not move them absolutely at once strange land?—No.

442. You would do it gradually?—Yes.

443. With regard to immediate action through- he neighbourhood, is it your view that if there sufficient land and the Board had authority to with a wide area and show the people that they taking action on a large scale it would give the le confidence?—You want to show the people you are in earnest.

444. You were in Achill?—I was, three years.

445. Do you think that some of the Achill le would come inland?—I think they might, but not think they would do so well. That is my ion.

446. I gather from you that all the west of the nce needs very much to be scheduled—that it ld be under the Congested Districts Board?—I d schedule the whole province of Connaught.

447. And would you consider that the Congested icts Board should deal with the scheduled area whole?—The whole province.

448. That it should deal with it throughout?— inly.

449. And not exclude Kerry?—And not exclude y or Donegal. Why should I? Wherever there ngestion, where there are twenty families living neconomic holdings, I would regard that as a sted district, and augment their holdings out of nearest land to be provided in any part of Ire-

450. Now, if the people at large saw that, and Congested Districts Board was dealing on a big scale with the problem, do you think that there would be a change in public opinion, and that public opinion at the back of the Board would enable them to meet all local objections?—I believe if they did that on a large scale all would be satisfied. It would be easier to deal with the people, who would feel that justice would be done to them, that their condition was to be improved, and that it would be done within reasonable time.

49451. Do you think all uneconomic holders should have their holdings enlarged before sons of tenants are provided for?—Oh, yes; I think they should.

49452. They should come first?—Yes.

49453. And sons of tenants afterwards?—By all means.

49454. Mr. Bryce.—With regard to that, you look at Ireland as a whole?—Yes.

49455. Because you are aware that there is a feeling in certain parts that the sons of tenants in the immediate neighbourhood should be first provided for?—Yes. That is a mistake. I would relieve congestion first. The existing holdings should be enlarged, and after that, if there was land left to be divided, I would give it to the sons of tenants.

49456. Before we pass from this point, you said, in answer to Mr. O'Kelly, that you thought the tenants should be consulted. You are aware how in a great many cases since the passing of the Act of 1903 the prices paid where there has been no intervention officially by the Estates Commissioners or the Congested Districts Board have been extremely high, and is it not your opinion that if those transactions had been carried through by the Congested Districts Board for example, the prices paid to the landlords would have been lower?—Yes, certainly.

49457. Is not that an illustration of the fact that it is not always desirable?—No, it is not. I have an instance here in my own parish. Lord Kilmaine left it with me to settle with the Congested Districts Board and the tenants, and the Congested Districts Board offered a certain number of years' purchase, and it was not up to the mark. It was really exceptionally low. The tenants were willing to pay two years' purchase more and have the lands striped.

49458. Mr. O'Kelly.—Do you mean to say that the tenants on the property should not be consulted?—I did not say that they should not be consulted, but there are ways of consulting them.

39459. How?—It is not by calling the men together. I do not say that you should bring a number of people together at a public meeting, and ask them which price they would pay. The tenants are not judges. If you are dealing with a Board you have confidence in, you can leave it fairly in their hands.

49460. When your evidence is read it will be interpreted as a reflection on the Estates Commissioners?—No; I did not reflect upon them.

49461. In reference to the Clanmorris estate would you tell me in what particular really you think that the Estates Commissioners ought to be rebuked for their action in connection with the Clanmorris property?—Oh, I don't think I have anything to say to it at all.

49462. But you referred to it a while ago?—I have nothing to say to it. What I stated was that as compared with the Congested Districts Board they did nothing.

49463. That is what I say—as compared with the Congested Districts Board?—Yes; what about that?

49464. Do your observations apply to the agricultural portion of the estate or to the estate as a whole?—In passing by I saw nothing done.

49465. Do you mean to say that your judgment was based upon mere cursory observation?—I have heard it stated besides.

49466. Give me a concrete instance?—I did not say that there was a dereliction of duty. I believe all they did was to mark out and divide the land where the tenants were to put up their fences and put up their houses. That is very different from what the Congested Districts Board does. That is what I meant to convey.

49467. Why is that?—Because the Congested Districts Board build houses, suitable fences, and all the rest.

49468. And so did the Estates Commissioners?—Where?

49469. In the County Galway?—I have not seen it here on the Clanmorris Estate.

49470. But the administration of the Clanmorris

Aug. 28, 1907.

Very Rev. Canon Lyons.

property by the Estates Commissioners, you say, is not such as administration by the Congested Districts Board would be, and I want to know in what particular definite way the Estates Commissioners have been guilty of neglect of duty?—There is no question at issue as to neglect of duty. It is only a question of the management of an estate. The Congested Districts Board act as I said a while ago. The Estates Commissioners do not put up fences or build houses.

49471. Do you still adhere to your view?—I do. Can you say anything against it?

49472. I want to ask you this: In what particular way have the Estates Commissioners been guilty of neglect that the Congested Districts Board would not?—I have never charged them with being guilty of neglect of duty.

49473. And in the administration of the Clanmorris Estate they have done all that was necessary?—All that they proposed to do.

49474. That the Congested Districts Board have done?—Have I not told you that the Congested Districts Board build dwelling-houses?

49475. So have the Estates Commissioners?—They have not done it. They have not done it on the Clanmorris Estate.

49476. No, because the houses were in very good order, I am sure?—No, but when they build houses it is on a different system. That is the difference between us. The Congested Districts Board do their work, and the other body does not.

49477. That is, observe, that you give judgment that the Congested Districts Board does its work, and the other does not?—I have said that the Congested Districts Board does its own work, and this o body does not do that work at all. It pays the te to do it.

49478. Mr. KAVANAGH.—Did I understand yo say that you would like to see all congested es bought by the Board now at once, although they not the money?—I would like to see that don satisfy the people, to give hope to the people, they may remain in their country.

49479. Would the tenants be satisfied to rer on under an improving Board at their present r for perhaps an indefinite number of years?—I quite sure they would be very glad, because they w have employment to keep them at home, and, secon they would have the hope of getting an enlarged h ing, and a better holding, and that is a very suffic inducement; but to leave them as they are at pre in a state, without hope, I think is very bad.

49480. The reason I ask the question is that have had evidence given by tenants who are ren ing five years under the Board, and they are satisfied with it?—I believe there is an amoun dissatisfaction, but if they saw that the whole of county was to be dealt with as one item in the c try there would not be the same amount of diss faction.

49481. Then you would be in favour of having the congested estates bought up at once now?—Y

49482. Even though they could not be dealt w —Yes; even though they could not be dealt w It would give some hope to the people that they not emigrate.

Mr. PATRICK HIGGINS examined.

Mr. Patrick Higgins.

49483. Sir FRANCIS MOWATT.—You are Chairman of the Castlebar Rural District Council?—Yes.

49484. Are you a farmer yourself?—Yes, a practical farmer.

49485. How much acreage do you hold?—Something about 100 acres.

49486. And what is the valuation?—The valuation is £45, and the rent something about the same. Valuation and rent are something about the same. The area of Castlebar Rural District is 140,640 acres, and the valuation £42,598. The population is 23,335, the rating being at the rate of £1 13*s.* per individual. The number of holdings under £5 valuation in the Rural District is 4,424, and the number over £15 valuation 367, which number occupy 36,502 acres, or an average of 100 acres each. The population of the Union in 1841 was 61,043, and in 1891 the number was 28,921, or a decrease of 32,142 in fifty years. The holdings under £5 valuation are altogether inadequate to support a family in any way approaching comfort. The average stock that such a holding could rear would be about one cow and two calves one year old, two pigs, and a donkey.

49487. Sir JOHN COLOMB.—That is five animals?—Yes, five and a donkey; one cow, two calves (each calf one year old), two pigs, and a donkey.

49488. Mr. SUTHERLAND.—What is the land for that?—I am taking the average holding under £5 valuation. Some of the holdings are rather more, and some less. I am taking the average.

49489. Sir JOHN COLOMB.—You say this is an average holding?—Yes, the average of holdings under £5 valuation.

49490. Surely an average small holder will not have two calves of one year old?—Some may not have a cow at all; others may have two cows; but I am taking the average case of a man in that district with a holding under £5 valuation.

49491. Do you mean that a man under £5 on the average will have two year olds?—Two year olds, yes.

49492. And no young calves?—Yes, we call them calves up to a year old.

49493. You mean calves, but not exceeding a year old?—Yes. All the able-bodied men and boys on those holdings have to migrate annually to England, where their average annual earnings would be about seven pounds, leaving their wives and children do all the farm work. In the present season I have known eighteen men leave one village for the harvest fields of England one morning in June. I may inst the case of a man named Laffey to illustrate the c culty of living on the miserable class of hold that exist in this district. He has to provide f family of nine on a holding of four acres, three b cut-away bog, leaving only one acre of arable l The non-scheduled divisions of this district ar many instances in a far worse state than som the congested portions. The Brabazon Estate, in division of Ballyhean, represents the state of af in the non-scheduled divisions. Eleven families this estate have to live on a valuation of £29, o average valuation of £2 12*s.* 10*d.* per family, w twenty individuals in this same division own 2 acres. The Brabazon tenantry have to travel a tance of five miles for turf, and a like distanc sow conacre potatoes. The rundale system is res sible to a great extent for the failure of cr particularly the potato. Tenants living on run estates have to keep tilling the same stripes fo lifetime. The Peyton Estate is typical of r estates in Castlebar district. I may be permitte mention a few instances on this property to show state of affairs in this union. In the village Clonfert there are fifteen holdings all in rund Thomas Gibbons holds three acres and twenty per in seventeen divisions. Thomas Fleming holds t acres two roods in thirteen divisions. Michael J six acres in twenty-three divisions. In Lo Moundeasy Pat Walsh holds four acres in twe five divisions. James Hyland four acres in fift divisions. In Middle Moundeasy Catherine Madi holds two acres in fourteen divisions. In Moundeasy Edward Reilly holds four acres in teen divisions.

49494. Most Rev. Dr. O'DONNELL.—In what e toral division are those townlands?—In the elect division of Cloonkeen.

49495. Mr. BRYCE.—And it is not scheduled Cloonkeen is scheduled, but the Brabazon estate i a non-scheduled division.

49496. Mr. O'KELLY.—And it is not schedu owing to the fact of the high valuation of the graz land?—Yes, the high valuation.

49497. And no population?—And no populatio

49498. Sir FRANCIS MOWATT.—As a matter of it is scheduled?—Cloonkeen is scheduled, but Brabazon estate is not scheduled.

49499. Most Rev. Dr. O'DONNELL.—In Cloonk there are 118 holdings under £4 valuation?—Y my lord.

9500. Mr. BRYCE.—In what electoral division is Brabazon Estate?—In Ballyhaise Electoral Divi-n. It is not scheduled.

9501. Mr. KAVANAGH.—Have any of those rundale ates ever had rent fixed on them?—Oh, yes, in rly all cases.

9502. How did the Sub-Commissioners fix the rent rundale holdings, as a matter of fact?—Oh, they nted out the different stripes.

9503. Mr. SUTHERLAND.—Who is responsible for ing the land in that state, Mr. Higgins—did the dlord ever try to prevent it?—I have never known He never made any attempt to my own know-ge, and I have never seen it under any manage-nt only rundale management, and in valuing land I have known instances where they never it, and I know a property myself where a gentle-n bought the property, and for seven years never the property.

9504. Sir JOHN COLOMB.—I suppose those rundale ates have been in rundale time out of mind?—ne out of mind; before my time; I have never n them otherwise.

9505. Mr. KAVANAGH.—And if they were striped re-arranged would there be any chance of their urning to rundale?—Oh, not the least. The ple's ideas in that regard are entirely changed.

9506. They recognise the difficulty?—They recog-e the difficulty. Drainage is one of the most ing needs of this district. Next to the distribu-n of the grazing lands, it is the most urgent. e crops suffer periodically from flooding, and some what would be the best tillage lands in the dis-t are most of the year covered with water. In matter of drainage, the Congested Districts Board ve done some admirable work in this district.

9507. Sir FRANCIS MOWATT.—That is arterial inage?—Arterial drainage. The Arterial Drain-Commission held no sitting here, nor did they mine any witness on the tenants' behalf from this trict.

9508. Mr. O'KELLY.—I was under the impression t you were to give evidence before them?—Yes, I was never called upon.

9509. But they took some evidence from Mayo?—s, they sent some evidence from Mayo. Very few es under the Land Purchase Acts have taken place this district, most of the landlords either refusing sell, or demanding such a price as made a sale possible; in most cases twenty-four years' purchase first, and twenty-six years' purchase on second term ts. The Fitzallan-Hope property was sold under Ashbourne Act in the year 1900 for sixteen years' rchase, and from inquiries I learn there has not n a single failure to meet their annuities on s estate. The properties of the landlords demand-twenty-six years' purchase are much of the same scription as the Fitzallan-Hope. The work of the rish Committees is greatly hampered owing to the ple in congested areas not being inclined to under-e improvements, pending the sale of the estate y live on.

49510. Sir FRANCIS MOWATT—Why will the ten-ts not execute the improvements—do you say it is cause they are waiting for the sale of the estate?—tactly.

49511. Why does he wait?—I think it would be a ry foolish thing to undertake improvements on se rundale holdings. In the first place they can-t undertake it because a man living on a rundale operty may have his neighbour's property coming thin ten yards of his door.

49512. Mr. SUTHERLAND.—But he might improve the use?—He might, but he is loth to do it because he inclined to hope that he will have a better house d a better holding. As an instance, I may men-on that the Clonkeen Parish Committee were anted a sum of fifty pounds to be expended under e parish improvement scheme, but owing to the use I have mentioned half that amount is all that uld be expended. The local sanitary authority nnot have the sanitary laws satisfactorily lministered under existing circumstances. In ngested areas where dwelling-houses are grouped gether, if the sub-sanitary officer serves notice on occupier to abate a nuisance by removing a dung ap, the statutory distance, namely, twenty-two feet, is told that his neighbour's house or yard is some-mes within a distance of ten feet, and his own arest field a quarter of a mile away.

49513. Mr. O'KELLY.—I think you would improve?—Improve, yes, because I have no landlord. Some of the landlords on the estates that I have mentioned refuse to sell at any price.

49514. On these properties the landlords refuse to sell point blank?—Yes, point blank.

49515. Can you give the names?—Mr. Acton and Colonel Ormsby.

49516. And therefore there cannot be improvement without compulsion?—Impossible.

49517. Sir JOHN COLOMB.—Did you hear the last witness but one, Mr. Rutledge?—Yes.

49518. Did you hear him say on the other side of the case, that the landlords in general would be quite willing to sell if it was understoood that they were not to get less than their net income. Did you hear him say that?—I did.

49519. Do you agree with that?—I disagree with that. I have known cases where they demanded twenty-four and twenty-six years' purchase.

49520. That is not the point. Take one of those two landlords, whichever you like. Were you one of the tenants?—No, I am not, but I am on an adjoining property.

49521. When you say that they absolutely refused to sell, can you give the Commission the date and the time and the circumstances under which they refused to sell, whatever the price was?—Well, I cannot give the correct date exactly, but as near as I can I think it was in 1904, the year after the passing of the Act.

49522. When you say that those two landlords refused to sell, do I understand that they refused at any price at all?—At any price at all.

49523. Well, then you are giving that information second-hand. It is what you heard?—Yes; what I have heard on most reliable authority.

49524. When you say "reliable authority" can you name anybody who had told you directly from the landlord that he would not sell?—I can say who it was. He is in Court, Mr. F. Kenny. He is in Court.

49525. If it be true I understand that your evidence is that in your view compulsory powers should be given?—Yes, I think so.

49526. But in your view would you expect any landlord to sell if the result were to be that he would be worse off than he was before?—Well, I could not expect it, but I could not at the same time expect that a tenant should have a rent put upon him that he could not bear.

49527. Let us stop there. Do you mean that the price that the tenant is willing to pay ought to determine the price the landlord ought to receive. Is that your position?—No, sir. I do not say that by any means.

49528. Please understand I am not cross-examining you in any hostile sense. I want to get fairly and accurately your views. You admit that you would not expect any landowner to lose by the transaction?—Yes.

49529. But you say that the tenant ought not to pay more than the fair value?—Yes.

49530. That is, that he ought not to be called upon to pay more than the fair value?—Yes.

49531. But supposing in that case there is a difference between you and that it would be necessary to give the landlord his net income and to say what amount of annuity the tenant should pay, do you think that either class ought to bear any loss, or do you think that the State in carrying out a State policy ought to bridge the difference?—I think the State ought to bridge the difference.

49532. Mr. O'KELLY.—Sir John seems to think that you got your evidence second-hand?—By personal experience.

49533. You are Chairman of the District Council?—Yes.

49534. And being in that responsible position as a public man you are generally consulted by all the tenants?—Yes.

49535. And is it natural that these people should come to you to consult you—they always do?—They always do.

49536. It is not from second-hand, but from first-hand that you got your knowledge of the facts?—Yes, if I may be allowed to call it so.

49537. Most Rev. Dr. O'DONNELL.—Can you tell us what you do with your farm of 100 acres. How do

Aug. 28, 1907.

Mr. Patrick Higgins.

you use that farm, do you till a portion of it?—I till a big portion of it.

49538. How much?—Eight or nine acres.

49539. That is a large proportion of the arable part of it?—Yes; all the arable part of it.

49540. And it is not the same part of your farm you have under crops every year?—Oh, by no means. That is the ruin of the country, my lord, constantly tilling.

49541. You observe a certain rotation?—Yes.

49542. And that means giving the land a rest occasionally?—Yes.

49543. Do you think from looking around you that small farmers would be greatly benefited once they had purchased their holdings, with some enlargement, if the system of cultivation were improved?—I think, my lord, there is great room for improvement.

49544. Draining first?—Yes.

49545. And liming the soil?—Liming the soil, and other improvements introduced.

49546. Sir Francis Mowatt.—Is there any lime in this district?—Yes, sir; there is an abundance of lime in this district.

49547. Sir John Colomb.—Are the £5 holders who keep cattle readily able to sell the cows?—Yes.

49548. Where?—Generally to graziers in the district.

49549. And therefore the grazier is a market for the small holder?—In the first instance he is at present.

49550. Have you ever thought, assuming that the policy of the State is to do away with the graziers altogether and still leave the small holders, what is to become of the small holder who is obliged to sell his yearlings when he cannot get a market for them?—Yes, I have thought of that several times. But in the first instance you say, "When you do away with the graziers you will not have small holders then." We say that when you do away with the graziers the market will only be improved, because our present system is for the small holder to sell over to the grazier and then the grazier keeps the stock for three years and he sends them over to the Leinster men for fattening purposes. Well, if you enlarge the holdings the people themselves will be able to rear them up till they are able to sell direct to the Leinster men. They will be able to keep them till they are two or three years old. I have no fear of that.

49551. What do you consider an economic holding?—That would depend on the district and the quality of the land.

49552. Take the district you know, or take the whole County of Mayo. If you were to acquire all the grass land you would have no small holders at all?—I do not say that you would have none. That would be an impossibility.

49553. How are these few to live if they cannot sell their yearlings?—Well, they would have the same opportunity that they have at present.

49554. How would they?—Well, I may describe their living as miserable. They could not approach anything like comfort.

49555. But at present, I understand, they sell to the grazier?—Yes.

49556. Now I ask you is it your view that when you have bought all the grass lands in Mayo and divided them up to the people you will admit that there would be a large number of small holders?—I did not say a large number, but there would be some. On the contrary I say there would be a very small proportion.

49557. Then that small proportion would not be able to sell their yearlings?—Oh, yes.

49558. Why?—They would be able to sell them to their better-off neighbours who would have larger holdings.

49559. But there would still be breeding of stock?—There would be different systems. One man may breed all his own cattle. Another man may not, or may buy. There may be different systems.

49560. Mr. O'Kelly.—With regard to the small people, they could do with their stock what they are doing now?—Exactly.

49561. If the grazing lands were handed over to the small occupiers they would be in a position to keep their stock for a longer period than now?—Yes, and the stock would be sold, in fact, then direct to the Leinster men.

49562. And therefore they would be able, having eliminated the grazier, to sell to advantage?—Yes.

49563. Sir John Colomb.—From a public point of view you perceive at once the importance of the question. Take your own farm of 100 acres. Dividing up all the grazing land would not give the people 100 acres each?—By no means.

49564. You have got 90 acres in grass?—In grass.

49565. Now, do you take in or graze cattle?—I buy cattle.

49566. And then you graze, and then you sell? You keep them and mature them first and sell after grazing?—Well, not on that system. I till a large portion, and most of the stock I sell I keep fat.

49567. Sir Francis Mowatt.—You fatten them?—Yes.

49568. They are stall-fed in winter?—Yes, a system that would be greatly followed if the people had the grazing lands.

49569. Sir John Colomb.—What is the amount of stock you carry on your holding?—As a rule about twenty-three head of cattle or twenty-five head of cattle. A large portion of it is mountain or bog.

49570. How many of the twenty-three or twenty-five do you breed yourself?—I breed about five in the year. I buy the remainder.

49571. And therefore to this extent you work your farm as to have only one-fourth with cattle you breed yourself and three-fourths you get as a grazier buying cattle?—Not as a grazier. I fatten them.

49572. At all events you buy this stock and you mature them?—Yes.

49573. You fatten them by house-feeding?—House-feeding principally. The land in this district is not able to fatten them.

49574. Are the grazing lands of the district able to fatten at all?—Very little in this county.

49575. And by stall-feeding you fatten the stock?—Yes.

49576. And do you mean that you buy them, keep him till the beast is three years old, put him in the stall and fatten him in the stall?—Yes, sir.

49577. And you do that?—Yes.

49578. And you find that pays?—I find it pays, and also the pasture improved by that system in the first instance, decidedly improved.

49579. The main question is that you find with 100 acres of land that that business pays—it pays you?—Yes.

49580. Mr. Bryce.—You were just going to say, when another question turned up, that if the small people had these grazing lands divided among them they would be able to produce the cattle finally in a state to sell directly to the Leinster buyers?—Quite so, sir; that is the point I intended to convey.

49581. Why?—Because they would feed them more on tillage. They would till more, and they would feed them on roots.

49582. And there would be more stall feeding?—Yes; more stall feeding.

49583. Instead of its being carried on when the cattle are in the hands of dealers or graziers?—Yes.

49584. There is one question I should like to ask you about, and there has been no evidence about it yet. Are the small holders generally, in your experience, in this neighbourhood in debt to the shops?—They are in debt, in my experience, very much in debt.

49585. Generally?—Generally in debt.

49586. Very few of them free from debt?—I would say so.

49587. Do they get long credit from the shops?—Yes.

49588. And they are not able to get out of debt?—There has been a series now of bad years, and I should say that presently they are very much in debt.

49589. Has not the year been exceptionally bad?—Exceptionally bad.

49590. Do you suppose that in other years, before this, not exceptional ones, they were in debt?—They were, more or less, they have been, a bit.

49591. Sir John Colomb.—I should like to ask you a couple more questions about this. Do you think that an ordinary £10 holding in Mayo—an ordinary average £10 holding, would enable a man to fatten stock?—From tillage it might, but not very many.

49592. You admit it could be done?—It could be done, because an acre of tillage land is able to rear more stock than five acres of grazing land.

49593. You would not tell the Commission that, your opinion, speaking from practical experience, ı wish us to understand that as a rule a £10 holding ıld fatten stock?—It could fatten a few.

49594. Do you mean that a few of the holders might able to do it?—I mean to say that a £10 holding uld be able to fatten a few beasts in the year, stead of turning them out as stores.

49595. Mr. KAVANAGH.—Would there be more ɔfit?—Oh, by far, and the land decidedly improved.

49596. Mr. SUTHERLAND.—Are you aware that in ldings in Scotland of that size most of the fattening kes place—in England and Scotland?—I was not ware of it; but the land is not so bad.

49597. Well, I may tell you that that is a fact—actly the same system you have carried on here. hat average acreage would a £10 holding represent? The holding might represent 200 acres in one dis-ct, and twenty or thirty acres in another district.

49598. On the average?—Taking the average of dinary land, it would represent about five acres of lage.

49599. Mr. BRYCE.—That man with five acres of lage would keep how many beasts, on an average?—bout ten.

49600. And out of those ten beasts how many do u think he would be able to fatten till he could sell em to the Leinster buyers?—About two or three.

49601. Sir JOHN COLOMB.—Do you consider it an ɔnomic holding that does not work a horse, and here a horse is not necessary?—Oh, certainly a horse an indispensable element in the working of those rms.

49602. I will put the question in another way to ake it plain. Do you consider that a farm which only worked with the spade can be considered ɔnomic?—I do not.

49603. Most Rev. Dr. O'DONNELL.—You keep two rses yourself?—Occasionally, yes.

49604. And you plough your land?—Yes.

49605. You have just given important evidence that ı have been long looking for—the evidence of one who is himself done the practical thing of raising stock id keeping them till they are stall-fed?—Yes.

49606. Do you live entirely by your holding?—ntirely by my holding.

49607. I suppose you grow a good deal of root op?—Yes, a good deal of wheat.

49608. And you use the root crop for fattening ttle?—Yes, all.

49609. And do you consider that if the grass lands were used pretty much as you use your holding the new occupiers could earn a fair livelihood out of the land?—I am certain of it my lord. *Aug.* 28, 1907. Mr. Patrick Higgins.

49610. Mr. O'KELLY.—How many cattle do 100 acres of grazing land carry?—Thirty or forty.

49611. Would those 100 acres of grass, broken up into farms, five acres each, under a system of mixed farming, carry the same number of cattle?—They would carry fifty per cent. more.

49612. Mr. Boyd told us, in London, that if 100 acres were broken up into four farms of twenty-five acres each those four farms would not be able to carry as many cattle as the 100 acres?—Oh, that is a mistake.

49613. As a practical farmer, you say that is a mistake?—Entirely. I am prepared to show that it is a mistaken view altogether.

49614. Mr. BRYCE.—Do you think the average economic holder of £10 rental or valuation stall-feeds any cattle?—In some instances he does; but as a rule there are not many of that description of landholders in this district.

49615. I see; it is an uncommon farm?—Yes.

49616. Out of those ten beasts that an economic holder, after the distribution of the grass lands will have, there will be some that he is able to fatten annually?—Yes.

49617. Sir JOHN COLOMB.—Instead of breeding to sell, as now, to the grazier. But when the grazing land will all be gone what is he going to do?—Well, he takes them to the market, and he has them better fed, especially in the spring season, when the Leinster man comes down here; and they are better housed and hand-fed, and he takes them in better condition to the market, and he sells them.

49618. But the middle grazier would be gone in Roscommon, and you will have to rely on the Leinster or the Scotch and English buyers?—I would anticipate that a new market would arise, and that the dealings would be direct with the Englishmen then.

49619. As a matter of fact, you deal with the Scotch buyers?—Yes.

49620. Far more than you deal with the Leinster buyers?—Yes.

Sir FRANCIS MOWATT.—Thank you; and allow me to compliment you on the excellent evidence which you have given, and on the excellent way in which you have given it.

Rev. MICHAEL M'DONALD examined.

49621. Sir FRANCIS MOWATT.—You attend on be-ılf of the Westport Rural District Council?—Yes. am also the Archbishop's administrator in Westport, ıd represent him for that district. I am in charge the parish of Westport, and any remarks that I ɔpose to make are intended to apply, in the first ace, to it, and then on account of the similarity of rcumstances to surrounding parishes. When this ommission was announced I proceeded to compile me statistics in order to enable the members to e how it is that the agricultural tenants of the arish of Westport manage to subsist and to pay eir rents. In the parish of Westport there are 622 gricultural tenants. Their total rent amounts to 3,321 0*s* 3*d*., and their total valuation to 3,150 8*s*. 5*d*. From this it will be seen that the verage valuation of all the tenant farmers in the arish, great and small, is only £5 1*s*. 5d., which ould be a convincing proof of the uneconomic condi-on of the whole of the district. The land is, in ost cases, wet and cold, and yields only a scanty re-rn for all the labour and attention bestowed on it. ome of the tenants are so very poor that they are not ble to avail themselves of the grants made by the arish Committee, under the Congested Districts oard, because when the Committee grant them even ne-fourth of the estimated cost of an improvement ı their dwellings, they are unable to bring together ne other three-fourths, and consequently have to forego ne gift of the Committee. Notwithstanding that, I ave heard it stated that they are most regular in aying their rents. A burnt child dreads the fire, and ese poor tenants have seen evictions. But, lest any-ody should imagine that this regularity is a proof nat the people can live by their lands, and pay rent n addition, I would call special attention to the fol-lowing facts and figures:—Last year 622 agricultural tenants, in the parish of Westport, paid in rents £3,231 0*s*. 3*d*. But out of these 622 families 1,343 members were abroad in England, or Scotland, or America, and sent within that year from the harvest fields, dockyards, railroads, and coal mines of other countries, the sum of £6,898 19*s*., to help their parents and the younger members of their families to subsist at home, and to pay the rent. Although the figures I have given belong only to the parish of Westport, the condition of affairs they indicate is the same in each of the surrounding parishes. Rev. Michael M'Donald.

49623. May I ask you, at this point, how that sum was ascertained?—Personally by my going round through the parish.

49624 And receiving from the different tenants who had received the money statements of how much they had received?—Yes, and I have reason to rely on their accuracy. This money is sent to help the old parents and the young members of the family to subsist and pay the rents. Let no one think that these poor people's rents are made by the lands; and the same is true of the surrounding parishes.

49625. Sir JOHN COLOMB.—Taking your figures, that would give an average of only £5 per migrant?—It does not follow, sir.

49626. You say that there are 1,343 members of families sending home £6,898. That would amount to £5 per head?—It does not follow that a man's son in America sends home to his father all that he earns. A second point that I would like to have brought before the Commission is that it looks strange that the vast area of country lying between Slyne Head in Galway and Belmullet, down in North Mayo, comprising such populous and impoverished districts as Ballycroy, Achill, Tiernaar, Newport, Wesport,

Aug. 28, 1907.

Rev. Michael M'Donald.

Louisburgh, Aughagower, Leenane, Letterfrack, and Clifden is not represented on the Board which has been created for the special purpose of dealing with such districts.

49627. Most Rev. Dr. O'Donnell.—You consider that there should be someone on the Board who should have local knowledge of the wants of such districts?—Yes.

49628. You have a good acquaintance with the districts you have named?—Yes. I am eight years in Westport.

49629. From your knowledge, would you consider that the line of improvement is that of enlarging holdings and migration on the one hand, and on the other the development of the fisheries?—Both, I should say. The development of the fisheries is of the utmost importance.

49630. Mr. Sutherland.—Of course, you are aware that at present the Board is not constituted on a representative basis at all?—I am quite aware of that, but the Board exists for a purpose, and attention to these extensive and congested districts forms an important part of that purpose, and they should be represented.

49631. What you mean is that there should be such a re-constitution of the Board as we have heard of already to-day?—I was not in when that evidence was given.

49632. But you will understand that the Board is not at all representative in the sense you mean, but that the present men are appointed for their eminence wherever they are?—Yes. It is of that we complain; we want men not merely to be eminent, but also to be acquainted with our local needs.

49633. Mr. O'Kelly.—Which would you prefer; a Board such as the present Board, free and independent or a Department such as the Estates Commissioners that would be answerable to Parliament?—I don't know that I should be able to give an opinion on that. But personally I would prefer the Board as it is for dealing with our district.

49634. What form would you suggest in reference to the re-constitution of the Congested Districts Board?—That each large congested district should be represented on the Board.

49635. In what way would you do that?—I am not prepared to go into details.

39636. Most Rev. Dr. O'Donnell.—Your view is this: that there should be on the Congested Districts Board, from the various congested areas, a representative who would know the local wants: is that the sum of your recommendations?—From that large district between Belmullet and Slyne Head there ought to be at least a representative on the Board. That is my statement. I adhere to that.

49637. The population along the coast from Erris Head to Slyne Head is specially circumstanced?—Yes.

49638. Sir John Colomb.—When you say representative what I interpret you to mean is that there should be somebody possessing local knowledge of that particular district?—Assuredly that is what I mean; not an elected representative.

49639. Mr. O'Kelly.—How would you appoint the representative?—I said before that I was not prepared to go into details.

49640. You have gone into details. You have said you would not have an elected representative?—Because I know a good deal of what happens at local elections.

49641. Mr. Kavanagh.—What number of additional persons would you suggest on the Board for Mayo?—That there should be someone to represent the particular district of which I have spoken.

49642. And one for each of the other districts?—No. I think that one who would represent this very large district, would represent most of the congestion in Mayo.

49643. Most Rev. Dr. O'Donnell.—I think your suggestion is this, that it would be good for the coast of Mayo and the neighbouring coast if there was someone on the Board from that coast who would know the wants of the coast in the same way as Father O'Hara knows the wants of the inland district?—My suggestion is this, that the district I have referred to from Belmullet to Slyne Head is practically neglected, because it is not represented on the Board. That is the extent of what I want to say. The Congested Districts Board might, with advantage, in certain cases, adopt local suggestions. Here is a case. The Board quite recently built seven new houses on the Bingham Estate at Gloshpatrick, convenient to the sea at Clew Bay. Before beginning to build the Board was written to and told that great multitudes of people from the inland districts were accustomed to come there to the seaside in the summer time. It was suggested to the Board, that they could materially and permanently assist the tenants and at the same time encourage these visitors by adding, say, one large room to the ordinary plan of the house which the Board is accustomed to build. The district is very attractive in summer, but the accommodation for visitors is deficient and primitive. The Board declined to adopt the suggestion, and in doing so it probably deprived each of the tenants of these new houses of about £10 a year.

49644. Mr. Sutherland.—What was the reason assigned for the refusal?—That they could not apply any of their funds for providing increased housing accommodation for the tenants of Gloshpatrick with a view to letting the extra rooms to persons who come to the seaside during the summer. By doing that they deprived the tenants of about £10 a year, and they neglected a good opportunity of developing the great natural resource of that poor district.

49645. Sir Francis Mowatt.—The natural resource being the visitors?—It being a seaside resort.

49646. Mr. Sutherland.—But they had not the power to do it?—I question very much whether they had not the power. If they had not they ought to have it.

49647. Sir John Colomb.—The extra cost of a room put on to one of those houses would not be more than about £20?—I don't suppose it would.

49648. Do you mean to say that a person spending £20 would get £10 a year out of it?—In the season.

49649. Then if an enterprising man could get £20 he could get 50 per cent.?—Each tenant if he had a large room added to his house would by letting that room to people who come from inland places in the summer time be able to get about £10 or thereabouts during the summer.

49650. These houses having been provided by the Board, if they had this room you think they would make £10 a year. If they could get a loan and had this room added at a cost of, say, £20 they would be making 50 per cent on their money. Don't you think by degrees that that will happen?—Probably you have before your mind a class of person different from the class who actually inhabit the houses. It would be one thing if the houses were so built in the first instance, but it is quite another thing now to ask the tenants to do what you suggest.

49651. I would not ask him, but surely he has that opportunity. Fifty per cent. is very good interest?—He might find it very difficult to meet the requirements of the Board.

49652. I am putting the Board aside. Suppose a man in one of these houses saw that if he put up a room at a cost of £20 he could make 50 per cent., and that the Board had refused to make the addition?—I have not stated that the man requested the Board to do that, but the suggestion was made to the Board, and I submit to you that the Board did not act judiciously in rejecting it.

49653. Mr. Bryce.—Would it meet your suggestion if the Board were to be asked not actually to build this house without cost, but to lend the money to the man and add to his annuity in proportion to the amount of money which they advance in order to build this extra room. Suppose the Board said: "We cannot consider this question of summer visitors, but if you like when the house is being built to have an extra room and have the cost of the extra room added to the annuity we can do so." Would that meet the case?—I don't know that it would meet the case at present. It might ten years hence, when those who occupy the houses are able to appreciate the mistake of the Board. It would be a different thing entirely when the house was being built if the room were added then.

49654. I am supposing that that is done, but that the annuity becomes greater in consequence of that?—I quite understand that.

49655. Don't you think that that would meet your difficulty? If the Board agreed to do this, would not the tenant agree to pay a larger annuity to have the advantage of having an extra room?—I should say so, because the increase in the annuity would be very small.

49656. As a matter of fact this question was up

onnection with the Scottish Land Bill in the se of Commons the other day. We managed to inserted in the Scottish Land Bill, which unnately has been lost, a provision that the ers in Scotland might receive summer visitors. er the existing Crofters Act they are not able eceive summer visitors. They are not able to nything but conduct the business of the croft; we got it inserted that they were to be allowed ave the summer visitors; but in that case they going to spend the money themselves, the case g that the crofters generally are better off than small holders on the west coast of Ireland; but nfess that the suggestion seems a valuable one ne?—It would be useful to the people.

r. SUTHERLAND.—The trouble is that it is not in Board's power at present. Providing accommoon for summer lodgers is not one of the purposes hich the Board can apply money.

658. Mr. O'KELLY.—Are you aware of any se, rule, or by-law in the Congested Districts which prevents the Congested Districts Board doing that work?—I am not.

659. Nor am I; I don't think there is any such se and I think that the Congested Districts rd can apply their money to any object they se?—As a matter of fact, the communication the Board surprised me and surprised others saw it.

660. You have got congestion in that district?—

661. The object of the Board is to mitigate, so as it can, congestion. Suppose that the only in which they can do that in that district is doing the work, on which you have laid some hasis, and that there is nothing in the Act to ent them from doing it, don't you think it is a way to proceed?—I should think so.

think you can take it from me that there is ing to prevent the Congested Districts Board from g anything they like with their own money. The gested Districts Board are empowered to spend r money in any way they please, so long as the ct is the mitigation of congestion.

663. Most Rev. Dr. O'DONNELL.—The purposes wide, but they are limited and defined. There ld be some difficulty about the annuity on the . At any rate, the land itself could not carry One difficulty about adding the annuity is that annuity is supposed to go on the land. But aps you would apply for a repayable loan to le those tenants to add a room to their houses, an for that particular purpose not repayable er the Purchase Acts at all. I consider that that ably would succeed?—I have no doubt that it ld succeed, but the reason I brought the point be- this Commission is that the Congested Districts rd henceforth might pay more deference to local gestions.

664. They always ought to pay deference to local gestions, but it would not follow that they should ays comply with them?—Nor would I suggest should. I merely want to emphasise the fact that Board can make mistakes, and that it did make in not providing the additional accommodation at shpatrick. There is a need that is very keenly along the western seaboard. It is a harbour for fishing boats. From Belet in Mayo, to Cleggan in Galway, there not a single harbour that fishing boats d run to for safety in stress of weather. The ermen are conscious of the wealth of the sea, but approach it on peril of their lives. Somere in Clew Bay there ought to be a harbour of ge, and some sympathetic Board ought to take the matter.

671. What has happened to the Inislyre pro- ?—That is more than I could tell you. I saw requently stated in the newspapers that it fell ugh owing to the fact that the Midland Great stern Railway Company would not contribute the uisite quota.

Ir. BRYCE.—I think the reason suggested by Father Donald is quite right. The Midland Company re- d.

673. Mr. O'KELLY.—I am probably better in- ned on that subject than Mr. Bryce. Even ugh the Midland Railway Company agreed to struct a railway from Westport to Inislyre Mr. Long told me he would veto the project?—Mr. Long said he thought the Inislyre project a foolish one and he would not approve of it.

49674. Most Rev. Dr. O'DONNELL.—Was not there money for the marine grant earmarked for Inislyre?—Yes.

49675. It has not yet been expended?—I think not.

49676. The Mayo County Council agreed to help it by a rate for a couple of years?—Yes.

49677. And the Congested Districts Board was giving one-tenth of the expenditure?—Yes.

49678. All these things seemed very favourable for the project which you say has been given up. Could anything be done to put new life into it?—I suggest that the Congested Districts Board or some sympathetic Board would urge the matter.

49679. Would the local people be able to elicit a favourable reply from the Midland Railway Company. Mr. Sutherland knows all about the fishing in Scotland. He has been constantly telling us that a harbour of refuge should have a railway in touch with it?—If the Government would supply all the funds required to build a deep water pier at some part of Clew Bay, and if that sum would be so large as £100,000, and if the need is so great that the Government would feel themselves justified in expending that much on it, I don't see how the Government would be justified in throwing up the project because the Midland Railway Company refused to give £15,000. It seemed to me that the Government were not in earnest.

Clare Island, for many years, has been the property of the Congested Districts Board, and is still cut off from the outer world, for want of telegraphic communication. The islanders may have boat-loads of fish, but they cannot send word to the mainland or to the markets; and thus it sometimes happens that the fruit of their toil on the deep is lost. It is well known that the fishing ground around Clare Island is not surpassed on the whole Irish coast; and I am constantly hearing it spoken of as a matter of surprise that the Congested Districts Board, which went sponsor for the island so many years ago, and did so much for it, left out that obvious essential to success.

49680. Would a cable from the mainland cost a great deal?—I don't think it would.

49681. Sir JOHN COLOMB.—What is the distance to the nearest point on the mainland?—Three miles.

49682. Mr. SUTHERLAND.—Have you ever tried the Post Office, the department whose duty it is to supply telegraphic communication?—I think that the priest on the island and his predecessor and others were in communication with them on the subject.

49683. They did not consent?—They did not.

49684. Most Rev. Dr. O'DONNELL.—The Congested Districts Board does help telegraphic extensions, but that is a small matter compared with the laying of a cable to Clare Island, which, unless the Post Office took it up, would be an extremely difficult matter?—I am aware that the Congested Districts Board helped the cable to Arran, which was much more expensive than the cable to Clare Island. I am aware since I left Arran that the large island has telephonic communication with the middle island and the south island. That is right, but I don't see why Clare Island has not been treated in like manner.

49685. Is not the landing in Clare Island very deficient?—Yes, very dangerous.

49686. You would require a good deal of money to make a good landing place at Clare Island?—Yes.

49687. Comparing the needs of Clare Island, is not a good landing place a greater need than telegraphic communication?—Yes. Is your lordship making a landing place part of the telegraphic scheme?

49688. You must take all those improvements together?—One at a time. They are a long time waiting for the telegraphic communication.

49689. Sir JOHN COLOMB.—You have pleaded very ably for telegraphic communication with Clare Island. You gave as a reason, that very often the islanders have fish, but they cannot telegraph word to the mainland or to the market, and therefore the fish is wasted?—Yes.

49690. Suppose you had the telegraph and no pier. What would be the use of a telegraph if you could not get on shore, and could not ship?—They have small boats on Clare Island, and they have large boats at Westport and round about. The small boats could meet the large boats if the owners of the large boats

Aug. 28, 1907.

Rev. Michael M'Donald.

knew that there was anything to come for to Clare Island.

49691. Sir Francis Mowatt.—If there were large boats at Clare Island it would do away with the necessity of that?—Large boats would have no business at Clare Island without a pier.

49692. Most Rev. Dr. O'Donnell.—When you speak of the necessity for telegraphic communication and a pier, is not it true that many of the needs of the Clare Islanders have been met?—Yes.

49693. Has not a great deal been done for Clare Island?—Yes, and the islanders have reason to be grateful.

49694. Therefore, while these things would be a decided improvement, yet if all the country had as much done for it as Clare Island it would be very well?—It is an extraordinary thing that the Congested Districts Board has done so much for Clare Island, and has still left them cut away from the outer world in a matter so small and so obviously necessary.

49695. Mr. Sutherland.—You have some experience in this sort of thing. Do you expect the Congested Districts Board to do everything. You are aware that local authorities can apply to the Post Office, under the Telegraph Act, to have extensions of this character, with a guarantee from them. Why should not they do it?—I would say, in a place like Clare Island, that the Congested Districts Board has stood sponsor for, they ought still look after it, and I say they should not be deprived of that, and that the Congested Districts Board should interest itself in seeing that it should be supplied.

49696. Is not it a primary duty on the local authority, whose duty it is to provide these things, in conjunction with the Post Office, to make an application to the Post Office, under the Telegraph Act?—Who is the local authority?

49697. The district council—they are the parties to apply under the Act?—I would urge the Congested Districts Board to do it here as in other places.

49698. I would suggest to you that you might tr to move them?—I am not connected with Clare Islan otherwise than that it is in the neighbourhood, and thought it right to bring forward its wants.

49699. Most Rev. Dr. O'Donnell.—Is not Cla Island rather different from neighbouring islands notably the great island of Achill, in this, that there comparatively good land in Clare Island, and th people largely live by the land, whereas in places li Achill it is very difficult to live by the land?—There a fair share of good land in Clare Island, but I do n know that all the people of Clare Island can li by the land. They fish at present, and the fishing very necessary to enable them to live.

49700. Not only that, but you consider, do not you, that being out so far in the deep, they are very favourably situated for the development of the fishing?—Yes; and the ground around Clare Island is recognised to be one of the very best fishing grounds on the Western coast.

49701. Mr. Sutherland.—Is it your idea, when you would telegraph that there was a good fishing, that the steamer should go out there to take the fish. Is that what you had in your mind?—That would be a very large scheme indeed, providing a steamer to go out and meet fishing boats and take the fish to send it away by train. What I had in my mind was that when the islanders have a catch of fish their little craft may not be able to reach the mainland, and they are handicapped for want of telegraph.

49702. It would be better for the large boats to fish themselves?—There are no large boats at Clare Island

49703. But if there were large boats they would be far better engaged in fishing than in carrying fish from small boats?—There may be large boats at Westport that are in touch with the train and these could go to Clare Island and take in fish from the small boats, and then bring them to the train.

Mr. Higgins re-examined.*

Mr. Higgins.

49704. Mr. Bryce.—Do you remember what Mr. Rutledge said with regard to the very large prices paid for occupation interest?—Yes.

49705. Have you any comments to offer on that?—I have known these extravagant prices to be given, but never by any person whose income was exclusively derived from land. Returned emigrants, sometimes police pensioners or shopkeepers, have been the purchasers in such cases. I have known two tenants' interests on a property over which Mr. Ruttledge is agent to be sold during the last ten years. One was sold for four and a half years' purchase of the rental, and the other at a fraction over six.

49706. One of these was purchased by yourself?—Yes, at four and a half years' purchase of the rental.

49707. Is there any case in which 100 years' purchase or 80 years' purchase, or any large number of years' purchase was paid by a neighbouring tenant?—I have never known a tenant to give any such price where the income was derived from the land. It is shopkeepers, pensions, or people who make money in America who give these high prices.

49708. Sir John Colomb.—You bought a holding yourself?—Yes.

49709. Was that holding adjoining your farm?—Yes.

49710. You bought it for the purpose of enlarging your own farm?—Yes.

Mr. A. M'Namara examined.

Mr. A. M'Namara.

49711. Sir Francis Mowatt.—Would you kindly state what you wish to bring before the Commission?—I am a District Councillor in the above district and Vice-President of the United Irish League, and am well acquainted with the condition of the small farmers in this parish. The half parish of Killeen is very congested. A large part of the tenanted portion of it is held in rundale. Some of the townlands have a valuation of less than £2 per holding, and the majority of the tenants would be quite unable to eke out an existence were it not for the extraneous assistance they receive, principally money from their relatives or friends in America.

49712. Just upon that—a large portion have less than £2 holdings. Would you regard these as farmers or would you rather regard them as labourers with an allotment? Under ordinary circumstances could a man earn his living without labouring for other people?—No; they labour abroad.

49713. Do you call a man with less than a £2 holding a tenant-farmer?—Well, they have got the name of tenant-farmers.

49714. The name won't help us. Can you say that a man with a £2 holding could be expected to live on the holding?—I am sure he could not.

49715. Therefore his holding is an addition to what he could make in some other way, either by assistance from labour or in some other way—fishing, for instance?—The tenants of the small holdings and their sons go to England for the harvest there and try to make a miserable living for their families. The Marquis of Sligo is the principal landowner in this district. He offered this and other portions of his property to the Congested Districts Board in 1901 at eighteen years' purchase. The Congested Districts Board considered the price altogether too high, and negotiations consequently fell through. After the passing of the Land Act of 1903, he was requested to sell to the Board by the Westport District Council, but refused.

49716. Did he refuse on the ground of the terms, or did he say he would not sell on any terms?—We asked him to sell through the Congested Districts Board, but he did not say or negotiate with the Board to my knowledge. Adjoining this very congested district is the vast grazing ranch known as the Houston Ranch, containing 24,762 acres. The best portion of this ranch was purchased by the Board four years ago from the Earl of Lucan. They have been requested several times by the District Council and the local branch of the United Irish League to commence the necessary work and distribute those lands, but they have not yet done so, nor have they given any explanation as to the delay. I must correct that. Since I sent the first precis of the evidence—since it got printed—we got

* For former examination, see p. 96.

ply from them that the land was leased, but did not even then tell us the length the lease to run. They said the land was leased last ner.

717. That lease has the best part of nine years an out?—I cannot say that. They would not give us that much information.

718. Did you ask for it?—We did, sir.

719. And they did not give you an answer?—until about two months ago—to the District cil—did they say that it was leased, but they not say how much of the lease was to run. That the first answer in four years.

720. Although you had asked for it before?—

721. Most Rev. Dr. O'Donnell.—Didn't you locally?—No, we did not, because I believe was an eviction since the land was first leased.

722. Sir Francis Mowatt.—I believe it is a fact they make repeated offers to the gentleman who it under lease to come to an arrangement, and as refused?—Well, that would only strengthen ase for compulsory powers.

723. It would not be fair to say that it was the of the Congested Districts Board that they did act more promptly, because they had no power it?—I am not saying it is their fault, but it is eat pity they have not got the land or have got compulsory powers to get the land. The of the ranch is held from the Marquis of Sligo he eleven months' system.

724. Most Rev. Dr. O'Donnell.—Is there much on the eleven months' system?—The greater of the ranch. I think there was only 16,000 bought by the Board.

725. And will some of the remainder be good illage?—Yes, there is some good tillage on it.

726. Mr. Bryce.—Where is that?—It is in the sburgh District.

727. West of Westport?—Yes, sir, and there a larger portion in that part of the parish than is in the part now tenanted; and it was con-ed the best part of the parish—the best land.

728. Most Rev. Dr. O'Donnell.—When did the ions take place?—'48, I think, the greater part nem. The kelp-making industry was a source of iderable earning to the tenants along the sea until this year. The price of kelp was re-d from £4 10*s.* to £3 10*s.* This is further re-d by the Marquis of Sligo, who claims one-fifth price of all the kelp made by his tenants. He an arrangement with the kelp agents, and they one-fifth the price of the kelp made by the nts. I consider this a most unjust tax on a ying industry for the following reasons:—1. The eed from which the kelp is made does not grow he foreshore; it grows on the shallows of the ntic Ocean and drifts into the shore after severe ms. It is generally taken out by men up to their ts in water. The tide——

729. Sir Francis Mowatt.—Do you know if l Sligo claims that royalty on the kelp because collected on the foreshore?—I believe that would is case. I cannot understand what other case he d have, because the seaweed is perishable in four five days after landing, and would be worth ing to anybody if it is not manufactured.

730. He contends that whether it grows on the lows or not it is collected out of the water on foreshore by men up to their waists, and there-he maintains that it is collected on the fore-e?—My belief is that as it is taken out of the he has no claim to it, when it is taken in the age of the tide.

731. Mr. Kavanagh.—Has that been the fact ays?—Yes, since the time the tenants were es.

732. Mr. Sutherland.—You believe he has a m to the foreshore?—I believe he has.

733. Mr. Kavanagh.—Has it ever been tested?—elieve so.

734. Mr. Sutherland.—The question is whether has a definite right to the foreshore?—I believe as. The Marquis gives no accommodation what-for drying it. It is dried on land for which he aid rent.

735. Sir Francis Mowatt.—What do you mean giving accommodation?—The land is rented as as the high tide rises, and any tenant that has land near the shore must pay for the place of drying. I have known men who pay £1 and £2. The kelp of this district is carted seven or eight miles to the kelp store, at a cost of five shillings per ton. Deducting carriage and royalty it only leaves £2 11*s.* to the tenant. I believe that at this price the industry will quickly die out. I believe there was only half the amount of kelp made this year as the year before.

49736. Mr. Sutherland.—What was the price?—I remember as a small boy £7 a ton being paid, also £5 and £6, and then up to last year it was £6 10*s.* We complain that the Congested Districts Board has given no accommodation for fishing in this district. We applied to them several times by memorials signed by the Parish Priest and the Protestant Rector for a pier at Bunlough Point. The inhabitants of Inisturk Island petitioned them also, as it is generally there they land their cattle for the fairs and markets. There is, I believe, twenty miles of sea coast from Ronah Pier to Bundorragh Pier without a pier or boat slip. I believe there would be a considerable amount of money earned by fishing if the people had accommodation. There is not a better fishing ground on the western coast than that immediately outside our shores.

49737. Sir Francis Mowatt.—Not a better lobster fishery?—Yes, and mackerel fishing ground too. As proof, there are from twenty to thirty boats from Connemara every summer and harvest fishing for lobsters on this coast.

49738. Where do they land the lobsters?—They land them in Connemara.

49739. You have no piers here, and I did not know whether they landed them on this coast or took them up to Connemara?—They nearly always go to Connemara, but they also go to Achill. They have a safe harbour in Connemara.

49740. Sir John Colomb.—Why don't the people in this district do the same?—They would lose their gear—they could not come in.

49741. Is that not the same in the case of the other people?—No, because they can go back to Connemara, where they have piers to land at. We have not a pier, good or bad—not even a boat slip. I believe it is the most neglected part of Ireland.

49742. Are you a fisherman?—I fish sometimes, but I don't make any trade of it.

49743. Are you a farmer?—I am a farmer.

49744. What is your acreage?—About 34, sir, Irish.

49745. That would be nearly 40 acres English?—I suppose something like that.

49746. What is your rent?—£12 8*s.*

49747. What is the valuation?—About the same.

49748. Do you live on the shore?—Part of it is on the shore and part of it is island. If the pier were erected the kelp that has now to be carted seven or eight miles could be shipped there.

49749. Mr. Sutherland.—Where to?—To Ronagh.

49750. Sir Francis Mowatt.—The carting is seven or eight miles to the kelp store?—Yes, from where I live.

49751. Do you mean if people built here a kelp store there would also be kelp brought there?—I don't see how it would not.

49752. Mr. Sutherland.—How is it sent away, Mr. M'Namara?—Sometimes by steamer to Glasgow or London, wherever the agents require them. Last year we had two companies from Glasgow buying, but I think it is all going to London now.

49753. They send round vessels to collect it?—Last year there were four schooner loads of kelp taken from Ronagh, while a full cargo or nearly two cargoes left our place. About half the kelp is made in my district. The Congested Districts Board, after purchasing an estate, charges the old rent until such time as the estate is re-settled.

49754. Sir Francis Mowatt.—Do they take the seaweed dry or half burned?—Half burned.

49755. Most Rev. Dr. O'Donnell.—What estate is before your mind?—I have Jones's Estate for one, and the Lucan Estate, part of it. In one case they are paying the old rent, and that a first term rent. I know four tenants adjoining this ranch of Houston's, and they are paying old rents still, and not alone that, but first term rents.

49756. Are there improvements going on?—No—nothing done.

49757. You are speaking generally of the Board's estates?—Yes.

Aug. 28, 1907.

Mr. A. M'Namara.

49758. Are not the rents expended on improvements?—I could not tell you that. I do not see why, when they purchased the estate, they would not give a reduction, when the tenants are getting no benefit.

49759. You allude to the ones who don't get improvements by it?—Yes—making the poor man pay for another man's improvements instead of getting them for himself.

49760. Are you sure that any man who does not get improvements pays for the improvements on his neighbour's lands?—If the Marquis of Sligo's estate were bought in the morning I know scores on that estate who could not live on the land. On the Earl of Lucan's estate I know four tenants who are being charged the old rent.

49760A. Has not that estate been greatly improved?—I believe it has been greatly improved about Castlebar.

49761. In other words your complaint is that these men get no improvement and are being charged the old rent?—Yes.

49762. But would not it be possible, on the occasion of sale, to compensate these four men?—If they did it would be all right.

49763. They have the opportunity still?—Well. I hope they will do so. There was a resolution came before the District Council asking for a reduction for the tenants on the Stoney Estate in Achill, and the facts that came before them were that they were all first term tenants and would not even get a second term without going into Court.

49764. You will find that they sent a complete description of the process. In many cases the rent is very considerably reduced, and in other cases where it cannot be done, those men who don't receive enlargements can't be benefited until the estate has been sold to the tenants, and for them some allowance is made in consideration of the fact that they got no enlargements?—That is the fact I wish to impress upon the Commission. This sometimes takes six or seven years, and I think it is not fair. I believe that the tenants should get an immediate reduction in proportion to the annuities they would have to pay if they bought direct through the Land Commission. These are tenants who would get no benefit by it. On a large estate there will be a good many tenants who will derive no benefit from the enlargement of holdings, and whose land is already stripped. If the Board buys an estate at 18 years' purchase the tenant derives no benefit, while if the estate is bought from the Land Commission at the same terms the tenant gets an immediate reduction of eight shillings in the pound.

49765. Sir JOHN COLOMB.—Do you want to represent to the Commission that as a rule when an estate is bought by the Land Commission 8*s.* in the £ is given?—It will come to that.

49766. Do you mean to represent that is the rule?—I have seen several reports of sales in which they accepted 3½ per cent. until such time as they got the money.

49767. Sir FRANCIS MOWATT.—Do they also make the improvements on the estate that the Congested Districts Board make when they buy an estate?—I could not say that.

49768. It makes a difference. In the one case he gets a holding unimproved and undrained; in the other he gets a holding improved and undrained?—It makes a difference as to whether you should get any relief or not.

49769. Most Rev. Dr. O'DONNELL.—You are making a case for the men who are better off. Why don't you pay more attention to the men whose holdings are enlarged?—I think that should be the business of the State, not the tenants. These better off tenants—the £10 tenant is not a very rich man, and probably he would prefer to have bought through the Land Commission, but giving an opportunity to the poor tenant to get an enlargement of his holding.

49770. You are perfectly right that the better-off man should yield a little for the time in order that the poor man may have enlargement?—They have yielded a lot, because this estate was offered to us about twenty-five years ago for eighteen years. Any way we got circulars from the Marquis of Sligo offering the estate at eighteen years' purchase to us direct, and we had a meeting. Our people came to the conclusion that the great part of the people would be in as bad a state as ever with the land they had; so the better-off tenants agreed to let the sale run out until the grazing land was distributed, and I don't see why these men, who did so much, should be punished for that.

49771. Sir FRANCIS MOWATT.—You don't blame the Congested Districts Board for that?—No; but I wish to give a reduction to people who don't get a reduction when they buy.

49772. Mr. KAVANAGH.—Would not you call arterial drainage a benefit to the whole district?—Yes, in some places you would improve, and reclaim any places requiring it, and pay for it.

49773. You would call arterial drainage a benefit to the whole district?—Yes, I do where it is necessary; but in some high-lying lands it would be no benefit to them.

49774. Sir FRANCIS MOWATT.—Do you regard it as an improvement in this county?—I think there is nothing more important in this county for the low-lying lands.

Mr. P. D. Kenny examined.

Mr. P. D. Kenny.

49775. Sir FRANCIS MOWATT.—Kindly state what you have got to say to the Commission?—It is under three heads. The first is reclamation of land, which I thought you might be interested in.

49776. You are familiar with this part of the country?—Yes; I live here most of my time. Last year I had a tract of cutaway bog growing heath, rushes and bog cotton. This year it grows two good crops of clover and rye grass hay without any tillage.

49777. What is the under stratum—is it clay or gravel?—It is an alluvial drift under the bog, which must have been a soil before the bog super-accumulated.

49778. Mr. BRYCE.—It is not boulder clay?—It is not.

49779. Sir JOHN COLOMB.—How deep is the turf in the bog?—When a child I lived there, though I have been away since, and I saw about ten feet of peat cut off it for fuel.

49779A. How much was left of the bog surface, between the surface of the ground and sub-soil?—An average of probably eighteen inches. The first year's hay pays more than twice the whole cost of the process, and the land is permanently reclaimed.

49780. Mr. SUTHERLAND.—Which process?—The process of fertilising to get these results—fertilising and seed principally, and the land is reclaimed in addition, as well as getting the crop.

49781. Sir FRANCIS MOWATT.—Are you the owner or tenant of this land?—I am the tenant. There is the least possible work to be done, I think. In my case, some drains had to be made; but there are great areas—and this is what I want to get at—ready for the process, without drains, in the congested districts.

49782. Mr. SUTHERLAND.—Those mountain slopes?—Mountain slopes, with furze, and those places that are half bare, can be made to grow big crops of clover, without tillage, as well as leaving them permanently reclaimed by the process that grows the clover.

49783. You would require to reclaim them before you get the first crop of clover?—Not at all. It is almost wholly a matter of the chemistry of the soil—the chemistry of fertility in the soil.

49784. Sir FRANCIS MOWATT.—Would you tell us what manures you employed before putting in the seed?—Lime phosphates and potash were the principal things. In putting in the clover I treated it with tritro culture, which certainly has the advantage of attracting nitrogen from the atmosphere and increasing the vitality and volume of the clover crop. Leguminous crops depend exceedingly little, or almost not at all, on nitrogen in the soil. Nitrogen is worth £14 a ton, when the other things are worth only £4 a ton. These legumes, such as clover, are the most valuable crops that can be grown by these very inexpensive substances, while, at the same time, putting

the soil the expensive substances that make com-
e manuring.

9785. You don't contemplate a succession of clover
s?—Clover, except white clovers, will live on
nary land not more than three or four years. It
ot a perennial, but the process leaves behind a
nical habitat for other clovers that are permanent
make very good pasture.

9786. Mr. SUTHERLAND.—I would gather that the
i has been devoted permanently to leguminous
s?—No; I am making use of the legumes as a
ns of reclaiming.

9787. Are not they very exhaustive crops?—They
exhaustive of the more inexpensive substances in
ility, but they increase the more expensive sub-
ces of fertility, and that is the particular point
hem. The nitrogenous substances in fertility are
ensive ones, costing from £14 to £16 a ton, while
others cost £4 a ton, and I think that the clover
nt and others will add on the soil a quantity of
ogenous matter equal in value to the cheaper
ds that are put in to grow the clover.

9788. Sir FRANCIS MOWATT.—So you contemplate
ntually being able to grow other crops on it?—
; the land is made fit to grow other crops—it has
verted the land. You can plough that land—that
hery stuff. Another effect is to rot the moss or
stuff. Bog, in any form, is a kind of partially
mposed vegetable matter, very rich in many cases
nitrogenous substances, which are not in an active
m, because they are insufficiently decomposed. The
mediate effect of an alkali upon the acids which
p them undecomposed is decomposition, as anyone
see.

9789 You said you had to drain this particular
e of land?—Yes; I found some draining necessary,
it might be very much more inexpensive to people
have dry tracts, as we have in the congested
tricts.

9790. Mr. SUTHERLAND.—How many years do you
nk will it take to bring this land into a state in
ch it can be cultivated by that process?—I put
seed at the end of April last year. That was the
t active operation involving expenditure of labour
cultivation, and the same year—last year—I
wed a crop, heath bent and rushes altogether. It
rather to prepare for this year's crop. This
r I have mown two crops of very good stuff
eed off the same land. Now you can plough it.
moss is decomposed, and you can turn it up with
plough and pair of horses. You can dig it with
heel of your boot. This is really the first year,
ause the seeding began only in April of last year,
l it might be later if you like. You would have to
in the process of fertilising earlier. That would
involve labour. It would involve some amount
expenditure. The whole thing does not cost more
n thirty shillings a statute acre, as regards fer-
sing.

9791. Next year can you take a cereal crop out
that?—You can, next year, if you like. It is
advisable. I further top-dress the following year
in for a meadow crop, and then I find again the
anical habitat, due to change in the constitution
the soil, will be fit for various valuable plants
t are very good food; and I have an area of land
t has been treated that way for the last three or
r years that is used as permanent meadow and
growing very good stuff. I have beside it a patch
t I have not touched at all, on purpose, for five
rs, so that all it has grown for five years is upon
and I don't think that it would be worth 2*s.* 6*d.*
acre.

9792. Sir JOHN COLOMB.—What area did you
e as a whole?—I have four statute acres treated
that way, in pieces, one year after another. I
nk we have within the congested districts land
v lying practically useless which in eighteen
nths could be made to produce at a profit more
n the whole present production.

9793. More than the whole present production
what?—Of the land that is worked. It is so of
farms I have visited in the average cases, and
far as I know the congested districts, I think that
present production could readily be doubled from
land at present cropped, without any additional
our.

9794. Sir FRANCIS MOWATT.—Without additional
our?—Yes.

9795. Mr. BRYCE. You mean that the same labour
uld produce double the results?—Yes.

49796. Sir JOHN COLOMB.—That is on land not requiring drainage?—The land they are working at present. Some of it might be the better for drainage. Some might not require it. Taking the land at present tilled by the people as it is, they could get more than twice what they get off an acre at present, and expend very much less labour to get it than they do.

49797. Am I right in interpreting the general effect of your evidence to be this, that with that class of land it is not so much a question of labour as a question of intelligence and knowledge?—Certainly. You see many cases of a great deal of labour being expended on land for almost nothing, with the land reverting almost immediately to heath and all the rest of it if they lay it down. This is owing to want of that intelligence which, added to their labour, would make all the difference to these poor people.

49798. Mr. O'KELLY.—Do you think that the application of technical knowledge to small farms would produce results far greater than are now produced?—That is the conclusion of the whole thing. I have done it.

49799. No doubt your farm is one which is regarded as a model, but would you think that it is a good thing to have not so much the enlargement of small holdings as the application of agricultural knowledge to the holdings at present possessed by the people?—I think that the need for enlargement would be lessened in proportion as efficiency was increased upon the land already held, because in proportion as the holder is efficient, his production and his standard of living are increased on a given area in his control.

49800. Mr. KAVANAGH.—Would not you say that cattle want a larger run, and that even if you increase the efficiency of a small holding you would never make it quite the same for raising cattle as the large holding?—I find where they get the greatest possible production, and profit too, I think, from cattle, they have the smallest possible run. In Belgium they can keep four full-grown cows to the equivalent of an Irish acre.

49801. Sir FRANCIS MOWATT.—You mean stall-fed?—Yes, or milkers. It does not matter which. They are fed with green stuff in summer instead of grazing. On some lands, notably lands in the West of Ireland that are friable, as they call it, and are very liable to be too dried up, you might get four or five times as much summer feeding from an acre under cultivated green stuffs fed in the byre as merely by grazing.

49802. Sir JOHN COLOMB.—I would like to ask you with regard to Belgium—if comparing the conditions of that country with Ireland—is it not by the quick succession of crops during the summer season that the food is got in Belgium to maintain the stock?—It is.

49803. Don't you think that there is much greater certainty there with regard to weather, and that there they are not impeded by the variations in weather which we experience in Ireland, with the result that they can get a greater number of manured crops off the land than in our climate, where the weather makes it uncertain whether we can do so or not?—I think that the weather in Ireland is more favourable to the growth of green crops than in Belgium. It is less favourable to the saving of dry grass crops.

49804. I entirely agree with regard to mangels and turnips, but with regard to the other crops used in Belgium I would like to get your opinion as to whether, comparing the two countries, you agree that in Belgium, owing to the certainty of sunshine in summer, there is no delay in the succession of crops for forage; while in our country, on account of the climate being so different, you cannot at all be certain that you would get the same number of crops in a season off the land as they do in Belgium? I can grow four crops of clover in the year in Mayo in a very bad year, on land at 5*s.* an acre.

49805. Sir FRANCIS MOWATT.—In continuation of Sir John's query, you say you have had two crops of clover this year?—Yes.

49806. At what dates were they got?—One was stacked about six weeks ago, and the other is nearly fit for cutting. I got three last year on similar land.

49807. Do you contemplate if this is cut now, as you say it is pretty nearly ready for cutting, that there is a prospect of your having a third crop?—

Aug. 28, 1907.

Mr. P. D. Kenny.

Not this year. This has been a particularly bad year. This is worse than last year by about one crop at least.

49808. Sir JOHN COLOMB.—What, in your experience, are the crops which they take off a holding in Belgium in summer when the holding is worked to the full?—They grow lucerne, and probably lucerne is the best of all for continuous summer cutting. We have not that in Ireland. I have not it yet, though it is better than anything I have. They also grow clover, but it is not as much for green feeding. We want a crop that will, in return for generous manuring, give the best possible growth, and lucerne is probably the best example for that particular purpose. We might grow that here, and an acre then would feed for green feeding in summer as much as three or four acres of the same land laid out in a dry season in bad pasture with bad seeds.

49809. Speaking generally, with your experience and knowledge, you would not say that the difference of climate and the absence of continued sunshine militates against the Belgian system being applied in Ireland?—I am inclined to think that our climate is better than Belgium for the purpose we are discussing. I have not been able to examine personally, but I have made careful inquiries, and find that our growth begins earlier and continues later, and that we never in winter get to so low a level of vegetable life in a state of nature. These facts then go a long way, and far more than make up for our greater variability of summer, which is very seldom so severe as to prevent growth, though it has done so this year; but this is the only time it has done so during the six years that I have been in Ireland.

49810. On the point of vegetation in winter, does not that militate against Ireland enormously in the difficulty of keeping down weeds in Ireland as compared with Belgium and other counties where the winter is harsher?—Probably that would apply to Irish farming as done in the West of Ireland, which is done rather to accommodate weeds; but if you plough in autumn you are rid of your weeds, and no one thinks that what helps the weed will help the plant worth growing.

49811. Is it the case in this part of the country if you plough a field in the autumn, ploughing your stubbles and having taken off your scrubb, that by Christmas the place will be nearly green?—It might be if it is not properly ploughed. If it is it won't be, certainly.

49812. Sir FRANCIS MOWATT.—You say you might grow lucerne in the West of Ireland. Have you any experience, or do you know of any lucerne crop grown in the West of Ireland?—No, but I am trying it this year. I have prepared some land for it now.

49813. Sir JOHN COLOMB.—Is there any quantity of lucerne grown in any part of Ireland?—I don't think it is grown largely in Ireland anywhere, but I hear it is a success where it has been attempted. It is another legume that lives on the air largely and does not depend on the soil for its nitrogen, which is the most expensive of the fertilisers. It gets all the nitrogen it wants from the air, and increases the nitrogen in the soil as well.

49814. Has the Department of Agriculture made any experiments in any part of Ireland with lucerne?—I think they are making experiments this year; but apart from lucerne very large quantities of green stuff can be grown with hardy legumes and rye grass. We can get three crops of rye grass in the year on fairly poor land, with good seed, and assuming favourable conditions.

49815. What you advocate is the system of keeping cattle in all the year and never letting them out for exercise, but infeeding them from beginning to end?—I am rather showing what can be done. That may not always suit if you want to make the utmost of your land. I think that that is practicable. The question was raised by the suggestion that there would not be play for cattle to run, as they call it. I think there is too much running in Ireland, and too little concentration on possibilities as they stand before our eyes.

49816. Mr. O'KELLY.—On that point, which is very interesting, it was suggested by Mr. Boyd in London that a hundred cattle would do better on one farm of a hundred acres than the same number of cattle would do if divided into four lots of twenty-five, each lot being placed on a separate division of 25 acres made out of the hundred acre farm. What is your view on that suggestion?—It is quite likely. If you divide each animal off to its own particular portion, and fence it in, it is obvious that it would not do so well. But when you take up cattle feeding as it is done in Belgium, and even at Glasnevin, without taking them out of the stall, the stuff grown for them is pure; it is grown for them specially, and nothing but the stuff intended for them is in the crop that is cut for them, whereas if you let them roam over a hundred acres in a natural state, they have to deal with the stuff as it grows naturally. That would include all kinds of rubbish on average land, sorrel for instance, and things that are positively injurious; and in fact it is an essential part of the difference between feeding at large and feeding inside. Naturally if you are growing stuff by tillage to feed inside you will not grow rubbish; you will not grow weeds.

49817. Mr. BRYCE.—In other words the statement by Mr. Boyd is a statement of conditions which would, in the proposed change, not exist at all?—I think so, if I may say so without offence.

49818. Mr. O'KELLY.—May I put it in this way. Suppose that on the four farms into which the one hundred acres were divided you had a system of mixed tillage, do you think that the same number of cattle might not be kept as before. Say that the farm had 100 cattle before division, and afterwards there was a system of mixed tillage, would you not be able to carry 100 cattle still?—Was there supposed to be any assistance from a system of mixed tillage before the farm was divided?

49819. Sir FRANCIS MOWATT.—If you applied the best possible system to the four divided farms could you bring up and fatten as you could on the old system of grazing over the 100 acres?—I think you ought to double it. I can fatten four or five cattle every year on a bit of poor land the valuation of which is only £6.

49820. Mr. O'KELLY.—In that case may I take it, as a practical farmer yourself, and a person who has applied a great deal of industry and knowledge to the business, that you differ from Mr. Boyd, who said the exact opposite?—Obviously if he said the exact opposite I am afraid I must differ from him, but I am not aware that he did say the exact opposite. Mr. Boyd assumes one set of conditions, and I assume another. My meaning is that, in 25-acre plots, well worked by rotation, the 100 acres, or any given area, will feed much more cattle than in ordinary pasture in one whole tract.

49821. Mr. BRYCE.—Would you kindly describe exactly to the Commission the process which you say should be pursued. When you were put down in October in face of a bit of bog which had been cut away, with 18 inches of bog left on top of gravel what did you do?—That is not when I began. If you walk over the plot in October, or any other time, you can easily see, from the plants that grow, what is underneath. If one does not know agricultural chemistry much, one can easily ascertain. If you see sorrel you infer acid as a fact. If you see heather you infer acid; or if you see sedge. These are common things on such lands, and they do not flourish without acid; that is, vegetable acids in the soil. The presence of these acids has two effects, bad ones. One is to prevent the life of organisms more worth having in that land. Another effect of these acids is to prevent the decomposition of vegetable organisms natural to the habitat. If there is water enough, bog is produced by accumulating insufficiently decomposed vegetable fibre. You want that stopped, and the obvious fact is that alkalis and acids combine chemically, and if you apply an alkali you neutralise an acid. As a chemical necessity, in proportion as you do that you produce two effects opposite to those injurious ones that I have mentioned. You stop the growth of that particular thing that associated with acid, but you have also by decomposing the matter, in so far as you have decomposed it—for when the acid is taken from it it must decompose—you set free the nitrogenous matter that has been held in it all these ages. To produce this effect you have got to find the cheapest alkali that will suit. Lime is exceedingly good, but not always available. Slag has the same effect, but is very slow. The best I have found for my purpose was a mixture of phosphates of lime and potash, both of which are manufactured at a cost of £4 5s. per ton. Six

seven cwt. to the statute acre of that mixture will duce the result that I mentioned. It has pro- ced the results I have mentioned in my own case.

9822. Per acre?—Per statute acre, with, of course, eful seeding as well. I may say I have not found manures much worth having coming into the West Ireland into the congested districts. The stuff is ng, as well as being bad of its kind.

9823. Sir Francis Mowatt.—You mean that that l in the West of Ireland is not good?—Yes, the ff you usually get through the country. The result that people are prejudiced against artificial nures, because they never get the right stuff; and they can get the other stuff if they like, or if neone would advise them about it.

9824. You apply the alkali—that is the first thing u do?—Yes; the alkali is applied in October or vember.

9825. And the seeding?—Not then. Then there a thing to enable the seeding to fasten a little on its footing, a little scatter of anything else, which its about ten shillings an acre, carting stuff on to just to give the seed cover. I don't care what it It is not manure, but rather physical shelter to ve the seed hold.

9826. Mr. Bryce.—You don't clear away the ath?—I don't touch it at that time. Next autumn is so brittle that it flies before the scythe. I nerally mow the whole thing off with a scythe. his year I mowed it with a machine; but it is im- rtant to have the land covered over with some ght covering of earth of some sort. What I used s stuff dug out of the foundations of an outhouse.

9827. It would not do to scatter it with broken up rf, dug up from the earth itself?—I would not vise that; it is liable to get wet suddenly and dry ddenly. Your seed might get destroyed, as exces- ve drying might take place in the particles on the rface before your seed properly rooted.

9828. But a little scattering of the subsoil would perfectly well?—You could not get anything better an this bluish clay stuff that you find under bog, nerever you can get it, especially if exposed for the inter to frost. There is an enormous number of ldings on which the people could live very com- rtably indeed if they knew how to get about their rk.

9829. Sir John Colomb.—Do they get proper eds?—They could get them at once if they knew. The roblem of congestion would be very largely solved if ie people only knew how to get to work on the land. n economic holding is a holding held by an economic nant. It is not a geographical measurement.

9830. Mr. Bryce.—In the month of November you ot your phosphates?—In October or November.

9831. About the month of April you scatter your eds and your shelter stuff?—I get in the stuff first— ne clay or earth—and on that I scatter the seed n April or May; indeed it does not matter up to une or July. The only difference is, if it is put n in April you will be able to mow off with it the eather of last year, which will be brittle, and this ill enable you to clear it off and leave the land clear or a very good crop next year.

9832. Mr. O'Kelly.—What do you mean by saying hat an economic holding is not a geographical neasurement?—I would say it is a holding held by an conomic tenant.

9833. An economic tenant must have necessarily, nd obviously, an economic holding. What is your lea of an economic tenant?—A man who is efficient n the treatment of the land under his control.

9834. I might ask you to tell me how many acres ou hold?—Thirty statute acres or a little over, I hink.

9835. Do I understand you to suggest that you night have an economic holding of ten or fifteen cres?—Yes.

9836. It all depends on the treatment that is pplied to it?—Not all. There must be a limit to he application of the statement I have made, but, roadly, in this country, I repeat that an economic olding is one held by an economic tenant.

9837. And by economic tenant you mean one who s able to apply knowledge to the working of his arm?—Yes. I find a man with ten acres who is njoying a much higher standard of living than a nan with one hundred acres across the fence.

9838. Where did you have that experience?—In ny neighbourhood.

49839. In Mayo?—Yes. I would be very glad to point out a few cases. We have a road running in my neighbourhood. On one side the farms are not less than fifty acres; on the other they are not more than ten; but I think that the standard of living is higher on the ten-acre side than on the fifty-acre side.

49840. You suggest that a man with ten acres of land might be doing better than a man with 100 acres?—Yes.

49841. You have examples of the kind in mind?—Yes. I shall be very glad to show them to you in our neighbourhood any time.

49841a. Mr. Bryce.—You have got your crops off in the summer. After you put on this manure in the new year what do you do?—I meadow again.

49842. With the same treatment of phosphates?—No. I have now made up the missing element in the balance of fertility in the soil. I have got my first crop. Farmyard dung, which is supposed to represent all the elements of fertility, would not help me much in this. It is the artificials that make up the things deficient in the soil and set free those that are already there. And next year I have got a balance in which I can add farmyard dung. Next year, with farmyard dung, I get a bigger crop than ever, and I can go on.

49843. You were keeping this land in meadow?—Yes.

49844. Now you want to make your farm work economically and to have some green winter crops. For that you will have to plough?—Certainly; and I will be able to plough this. I can plough it now, but I think it is better to continue a few years after I get this effect produced, treating it and meadowing it in this way, because it requires some time to complete the decomposition of the old mass of vegetable stuff that has been half decomposed lying underneath the surface. I find in this process the fertility is travelling downwards an inch or two each year, so that presently you may find it six or seven inches, and the plough then comes, turning over mould, whereas before it would have to turn over a wild sod of peat. The difference is very considerable. Time is required to complete the process.

49845. Sir Francis Mowatt.—The moment that is done then the alternate cropping can be given?—Yes, provided it is dry enough. I think the mind of the people is diverted from this kind of thing. I don't merely think it—I know it. The people are not directed in these matters, and they don't believe it even when it is done.

49846. Would not your own case act as an object lesson to those about you?—I think the general effect in my neighbourhood is to discredit every fact achieved. I think that my average neighbour is very suspicious of every fact, and the more it is a fact the more he seems suspicious.

49847. Mr. O'Kelly.—Is it the paternity of the fact that he is suspicious of?—Probably that might have something to do with it; but their attitude towards facts is not as we find in other countries. Before you get a fact accepted here you must have it approved by somebody else. That brings me to education, and I would like to say a word about that in relation to these things. If the public mind were prepared for these things by education and the atmosphere of early life—if you had an industrial atmosphere, and an industrial public opinion you could not have this incapacity at industry. Generally speaking, I find my neighbours incapable of applying my realised facts to their own case, although my time has been spent mostly that they might do so, because I don't depend on doing this exactly. I should be very glad if my life were useful in any way. That is the only motive I have in the matter. I find my neighbours generally incapable of applying my realised facts to their own cases, though it would enable them to double their income and their standard of living at once. They have practically no knowledge of the chemical processes of fertility, and they seem suspicious of new facts even if they have the concrete demonstration of years. Besides they are brought up and educated not to consider facts as facts, but rather to accept privileged opinion as their sole guide.

49848. What do you mean by privileged opinion?—What you thought would be of enormously more value in the public mind than any fact that I could present—or what you said you thought.

49849. I am following you with the greatest possible interest. I must confess I would like to have an

Aug. 28, 1907.

Mr. P. D. Kenny.

elaboration of that privileged statement—what is privileged opinion?—I mean it to be the opinion of a person enjoying privileges in various ways, and who is looked up to as a leader in various ways, with the result of adding to the current value of anything he might say on the subject, whether he knew anything about the subject or not. That is very often the result, while the actual facts, which I have presented, are discredited, because they have not the approval of such privileged opinion.

49850. Mr. SUTHERLAND.—In short, they will not take other people's opinion for their own?—The peasant schools might well concern themselves with the growing of clover on top of heather. There is scientific education, as well as profit, in it. In these schools we have nothing of the kind, and the effect on the mind is rather in the opposite direction. Hence the failure of the Congested Districts Board to get its excellent intentions presented in tangible improvements in the conditions of the people.

49851. Sir JOHN COLOMB.—Are we to take that statement as meaning that where you have seen the operations of the Board they did not improve the conditions of the people?—Not to such an extent as would be the case if the people were capable of making the most of it. For instance, where they have done drainage, as is the case in Roscommon, I never saw finer work than is done in the River Lung, near Ballaghadereen. I was all over it. I find that extremely little advantage is taken of the opportunities created for them.

49852. You mean that arterial drainage having been provided, the adjoining tenants, whom it was intended to benefit, are not making good use of it?—They are not making much use of it, and don't know how when they are ready to do so. By the means I have suggested, they could easily do so without the expenditure of labour even. It seems a pity that they don't.

49853. Mr. BRYCE.—Mr. Doran, who is chief inspector of the Congested Districts Board, has exactly the same opinion as yourself with regard to the necessity of education following upon drainage done by the Congested Districts Board?—I am quite sure that the work of the Board is largely lost for want of preparing the minds of the people for the work and the advantages that it offers to the people.

49854. Mr. Doran will, I think, agree entirely with that?—His acquaintance with the data of the matter will be larger than mine.

Sir FRANCIS MOWATT.—We all agree with you in the matter of education. We might take that for granted.

49856. Mr. SUTHERLAND.—You take into account the past history and circumstances of the people, which have not been very conducive to a good state of education. You admit that?—I am quite sure that the Irish people are naturally as capable as any people in the world.

49857. You take into view their past history and how they have been used?—I don't think it is a matter of charity. I hope that there is nothing uncharitable in my attitude towards them, surely, if I am here to help them. I cannot help them, except by telling them the truth. I cannot tell them they are perfect when they are losing half their energies for the want of the application of knowledge. There are other hindrances in the way of the Board's work which it is not at all pleasant to me to present to you; yet it seems to me that it would be humbug for me to come here and not present them. I don't like doing it, yet they are facts. Officials of the Board complain to me that they are prevented from doing their duty by clergymen. An engineer spends weeks striping an estate in accordance with the Board's plans, and then the parish priest comes down and puts an end to the whole arrangement. The Board may provide money and plans for migration, yet this side of the Board's work remains an obvious failure, and the Board's officials complain to me that the priests will not let the people leave their parishes, however congested.

49858. Most Rev. Dr. O'DONNELL.—Would you give a particular case in which the clergyman has interfered with the engineering work?—I have thought of that carefully, and I don't think I ought.

49859. It is a difficult thing, then, to bring your statement to a test?—It is difficult to bring it to a formal test, but the thing is common in my experience.

49860. I think we cannot go up on that. I should like if you allude to a particular case to know the migrants then?—If I mention any particular case I specify the engineer or official of the Board who has told me this. That I refuse to do, because it is a statement in confidence—a statement of the truth of which I am thoroughly convinced—and I am certainly not going to break confidence with one who has told me those things.

49861. It would not be a right thing to do at all, but it is a strange thing to make a statement and not be able to give the evidence on which it rests?—I am more concerned with stating what I believe to be true, and my own conscience is a much more important standard to me in the matter than any other whatever.

49862. You could not have a standard to go by more important than your own conscience, but it is a very important thing for one who goes by his conscience to have his conscience rightly informed. Could you give those cases in which the migrants were deterred from coming through the action of the clergyman?—Yes; I can give those, because no official of the Board is involved. I am free to give those. The officials commonly quote the priest as follows: "Do any good you like within the parish, but don't let me catch you taking any man out of it."

49863. The instances, please?—That has to do with what we have been discussing, and which I refuse to specify.

49864. I can quite understand your honouring your conscience in the most scrupulous way, but it does occur to me to be strange that you would state that there were such instances without giving the evidence on which the instances rest. I would not think it strange for you to state to the Commission that it was your own impression. I think it is perfectly fair for you to state that it is your own impression?—I have not any objection at all to the Commission taking it as my impression if it is more desirable to have it in that form, but I will not break confidence with the officials of the Board who told me this, who trusted to my sense of honour, and whom I have known for years, and known to be very good officials.

49865. Mr. O'KELLY.—Are the estates to which you are making reference in the County Mayo?—Yes.

49866. Do I understand you to say that these things have occurred in the County Mayo?—Yes.

49867. You have found priests, clergymen, on estates purchased by the Board who dissuaded officials of the Congested Districts Board from migrating tenants to a distance?—The word used by the officials of the Board themselves is, rather, "coerced."

49868. Do I understand you to say that the officials of the Congested Districts Board, on estates in the County Mayo, were coerced into preventing people from leaving their parishes?—My personal statement is that the officials of the Board have told me so over and over again.

49869. Let me suggest this to you: in all fairness, do you think, coming before this Commission, that it is a fair statement to make considering that you decline to mention this particular estate?—No; it is here I am ready to specify that. It was the other I was not prepared to specify, because other people were involved.

Mr. O'KELLY.—You are a very well-known man, as we all know, and a good deal of respect is paid to any statement you make. You have now said that in the County Mayo clergymen of your own Church have coerced officials of the Congested Districts Board into preventing migration from particular parishes, for this reason, that they wanted to keep the people within their own parish and did not want to have the number of their parishioners diminished?

Sir FRANCIS MOWATT.—I do not think he said that.

49872. Mr. O'KELLY.—I think that is the effect of it. (*To witness*).—Is that the effect of it?—I don't like dealing with opinions. Peasants in the congested areas give that as a reason why they are not let go.

49873. I might suggest to you—because we ought always be fair—that the clergymen have always been the most active and the most industrious in trying to persuade the tenants on small uneconomic holdings to migrate from those holdings to a distance,

that, with the assistance of the Congested Dis-s Board, they have, in many cases, succeeded in cing them to do so. Would you differ from that estion?—It cannot be those same men certainly. n quite certain that some clergymen will have l in that way. I only wish they all did.

874. I do not know the officials who are in your dence, but might I suggest that there are other als of the Congested Districts Board who, if you ult them, will tell you that the best help they in trying to persuade tenants who were reluctant ove in congested districts were the parish priests ne various parishes?—Generally: I am not aware hat.

875. Surely, if you have an isolated case, you ld not press a general charge against the clergy n one or two cases of the kind that you have tioned?—My statement is that officials of the rd generally make this statement. That is the nt of my statement and of my responsibility in matter.

876. Sir Francis Mowatt.—You have intro-d, I don't know whether intentionally, the word nerally." You have said that the officials of Board generally told you. I understood before were referring to one or two officials?—This is first time I used the word "generally." I use word "generally" now because of the sugges-s contained in the other questions. "Almost riably," I think I can say instead of "gene-y."

877. Mr. Sutherland.—I think you said you ght your responsibility was discharged when you ght this before the Commission, that certain in-duals who were officials of the Congested Dis-s Board told you such things: do you hold to ?—What I would rather say is that that is the nt of my responsibility. That is my statement, I don't want to have any enlargement of it e.

878. But the statement is made?—The statement his, that the Board's officials generally tell me , and tell it as one of the particular difficulties arrying out the work of the Board.

879. Mr. O'Kelly.—With all due respect to the rd's officials and to you, let me say, in a per-ly friendly way, that, knowing the County Mayo do, and I know it from end to end, that my w is entirely different from the view of the Con-ed Districts Board officials who are in your con-nce. Let me tell you that in every single parish he County Mayo the priests have done their best, have exerted themselves to the full, in order to nce those people who were on small holdings to e and to go to a distance, and it would not be for me, knowing Mayo as I do, to allow a ement of the kind to pass unchallenged?—Then matter is between yourself and the Congested ricts Board officials, who also know all about it.

880. Mr. Kavanagh.—We have heard evidence over the congested districts from would-be mi-nts and possible migrants, and we never heard single statement of the kind?—And I don't think will.

881. And I don't think the statement is possible n anybody?—I promised to be specific about this tter. On the townland of Cultrasna, within a s of Kiltimagh, the Board has settled the whole the tenants on the mere equivalent of the land had before, and not one of them can work a gh owing to the nature of the land. This is a case. They continue to go to England an-lly for a living. One of them, John Ivers, has l of the annual value of 15*s*. He had only one last year. This animal he had to graze with a ghbour, paying more for the grass of his cow n for the whole of his purchase annuity. The rd has built a new house on John's 15*s*. estate, ch is perpetuating congestion, and it is practi-y the same with the rest of them. The land has n striped by straight stone walls. Destitution been rectangulated, and people are assumed to eve that prosperity lies in the difference between ight lines and curves. They have an equivalent the land they had before. Not a man can work dough or a horse. All have to go to England. n Ivers says he is ready to migrate any time. se of the rest whom I interviewed intimated ir willingness to go to better holdings, except one, o told me that the parish priest would have to be sulted first; and yet they are fixed on these scraps. It is said that the migration powers of the Board have failed only because the people will not go.

49882. Most Rev. Dr. O'Donnell.—Is that the whole case?—That is the case as regards the migration question.

49882A. Seriously, do you take your case as showing that in that case the parish priest or any priest prevented the small holders from going to larger holdings available for them?—My lord, I am concerned only with what they tell me.

49883. Did they tell you that?—Yes.

49884. What did they say?—They said they were ready to go away.

49885. Did they say that the parish priest prevented them from going to holdings available for them?—One man told me that before any of them went the parish priest would have to be consulted.

49886. Would not there be a very good reason for that?—I think the thing ought to be managed between the man and the Congested Districts Board. I do not really see why religion should come between the Board and the people who have to deal with these matters. I don't think it a function of religion.

49887. Does it come in at all there?—As represented by the parish priest I am afraid it does.

49888. Is not it a very natural thing for those people to take the advice of their parish priest?—It would be more hopeful if they were capable of taking their own advice in their own matters.

49889. That is your view, but would not a sensible man take the advice of somebody, and who so competent to advise those people as the parish priest. I ask you to prove the statement that in this case the people were prevented from going to better holdings by the parish priest?—My statement is they said so.

49890. You have not told us that they said so. You said that one man said that before going to a better holding they should consult their parish priest. That is what you have told us. Do you think that that is sufficient?—And because from my conversation with the rest of them my conclusion was that that was the difficulty in the way.

49891. Did any other of them say that to you, that he was in any way prevented?—Some of the same people here stated, in the same townland, that the reason for not letting them go is that they were worth so much per head per year in the parish.

49892. Who said that?—Some of the people in the village round Cultrasna.

49893. Did they say they would not be let go?—Yes.

49894. You began by telling us that one man said that before he went he would need to consult his parish priest; then you have made a statement which, of course, is quite consistent with that, that a man said that before any of them went they should consult their parish priest about it, and then that some of them said they could not go without the permission of the parish priest because they were worth so much a head to the parish priest. Are all statements true?—This man who made the first statement did not say that. Others of them I asked about it, and why should there be a desire to keep them there.

49895. Did they say there was a desire to keep them there. Did you put that to them?—I did.

49896. You put it into their mouths then?—I don't question anyone's motives. I assume them to be honest. I ask your lordship to assume that mine are.

49897. Certainly?—Thank you very much. Therefore I would not go to put questions into their mouths.

49898. I have no question of that sort to raise, but I want to get what occurred?—I will tell your lordship. I saw that man, and heard him make that statement to me, that they would have to consult their parish priest before they left. I went to the others after that, on several days, as much as anything to get their criticisms on the statement of the first man, and to see what they would have to say about it, and several of them told me that that was the reason for keeping them, that each household was worth so much a year to the parish collection.

49899. They said the parish priest was keeping them for that reason. Is that the fact?—They stated that that was their view of it. Naturally they are

Aug. 28, 1907.

Mr. P. D. Kenny.

not in a position to discuss the motives of the parish priest. That is what they said.

49900. I only wanted to know exactly your statement of what they said. Did they say to you that the parish priest intervened at all?—I will repeat my statement.

49901. Will you please answer this. Is it not an easy question. I don't want to put any catchy question. Did they state that the parish priest intervened at all?—They stated to me that the parish priest objected to their leaving the parish, and that in their opinion the reason was that they, per household, were worth so much a year to the parish collection.

49902. Did you ask them were they prepared to go but for this intervention?—John Ivers, for example, is prepared to go anywhere.

49903. Are you aware that there is not land at present for everyone who is willing to go away?—That would not have to do with this explanation of the failure of migration from unwillingness to go.

49904. Had you before your mind any land to which they could go?—Yes.

49905. Land that was available?—Land that might be made available.

49906. How far away?—About twenty-five miles.

49907. In the possession of the Board?—Some was and some was not. I mean grazing ranches, such as were discussed here to-day, might be bought at any time by the Board for these purposes.

49908. But at the time there was no land in the hands of the Board for the purpose; was there?—That I am not concerned with.

49909. I thought you would be concerned with that?—I am only concerned with the plea that migration has failed because the tenants refuse to leave. I think that the Board is interested in that plea.

49910. No, on the contrary we have been told by very small men that they were prepared to migrate if they got improved holdings. Now, you convey to the Commission that these men are slow to express their opinions. I have not the least hesitation in saying to you this, that if there is one thing with which these small men have impressed the Commission, from Malin Head to Cape Clear, it is this, that they were perfectly steady in their evidence, perfectly fearless, and perfectly straight and simple in their evidence; and you may take it for granted that those small men, who are practically all your countrymen, have these native qualities. Is not it, then, a very serious thing for you to come before this Commission and suggest that these men have not the bravery to come forward and state their opinions to the Commission?—I am not aware that I ever stated that. I am concerned only with what these men stated to me.

49910A. Did not you state to Mr. Kavanagh that we should not hear it? What was the drift of that statement? Mr. Kavanagh said to you that we never had heard a complaint of priestly interference to prevent migration, and you said that we should not hear it. What was the drift of that?—My meaning in that is clear. There are occasions on which they do not tell you the truth even on oath.

49911. I am sure you are saying what you think, but, very distinctly, I think I can say to you that I have not overstated the quality of the small men who have come before the Commission?—I am sure the small men and the big men in Ireland are just as good as anywhere else in the world, minus these differences in the conditions in which they live; and yet I have known twelve of these small men to perjure themselves absolutely not three years ago in a matter about which I knew the facts absolutely, and I knew that they knew the facts.

49912. Mr. Bryce.—With regard to the question of this place, may I just get the name of the estate on which it is situated?—The townland of Cultrasna. It is a mile east of Kiltimagh, or less than a mile.

49913. Were you informed that these men had ever been offered the possibility of migrating?—No.

49914. Then the whole thing was in the air: you supposed that there might be land to which they could migrate; but no actual land was offered to which they could migrate, and they had not been offered the possibility of migration by any official of the Board?—About that I cannot say. I think I did not discuss that particular matter with them. I rather assumed that the duty of the Board was to find land for them, and to relieve congestion by finding land elsewhere. When I found that the Board fixed them permanently on impossible holdings naturally I began to examine the question would they go if they got land? The common reply to me is they will not leave where they are. Then they tell me they are willing to go. Then we discuss the reasons why don't they go.

49915. I think we saw that very place at the beginning of the Commission. My recollection is that we were told by officials of the Board that at the time the estate was settled there was no land available for the enlargement of holdings. The Board as constituted, has considerable power, and as things are at present has to work from hand to mouth. It sometimes gets an estate and has got to settle it. It cannot keep the people indefinitely going, and if it has not got a place to which it can migrate them it is bound to settle them there in the meantime doing the best it can, striping the lands and making them as comfortable as it can. If the opportunity occurs later on, by the purchase of grass land in the neighbourhood to which these people could be migrated, then would come the opportunity of enlarging their holdings by offering the best of them the chance of migrating to this place which they would buy. I am not sure, but I think we saw this very place quite close to Kiltimagh, and that is why I asked the question whether they had been actually offered the possibility of migrating?—That would not require to settle them permanently on impossible holdings in the meantime and build houses for them at the expense of the State. The annuity value of the house and building in the case that I have mentioned is only fifteen shillings, and this for a man who has to send out his cow to be grazed with a neighbour, paying more for the grass of his cow than for the whole of his present annuity. Why should the Board relieve congestion by doing that? Would not it be better to wait until land was available?

49916. Sir Francis Mowatt.—We are altogether getting away from the question before us. I think the Commission may be content to leave your evidence as it stands, with the impression that it makes on them from hearing them as regards that point?—Very well. I have said all I had to say.

49917. Mr. O'Kelly.—You were a great friend of the late Mr. Davitt?—I knew him very well.

49918. You knew Mr. Davitt's ideas about the compulsory acquisition of land as well as anyone?—I don't think I remember. I think it would follow, from his convictions, that he would be in favour of compulsion.

49918A. Have you got any views to offer on that subject?—I should like to offer one that may be relevant to some extent. I think that the use made of land and the capacity to make use of land are matters very much more important than the question of compulsion.

49919. That is not the question. Are you or are you not in favour of compulsion? I dare say you are in favour of solving the problem of congestion in Ireland?—Yes.

49920. You think it is a great evil in the country, and would like to see it abolished?—Yes.

49921. If the means by which it is to be abolished are conditional upon the exercise of compulsion, would you hesitate in the application of compulsion?—I should agree to compulsion if it resulted in having the land held by the capable.

49922. We may assume that a Board like the Congested Districts Board would give land only to the capable and to those who offered some promise of being industrious tenants?—I don't see any such promise.

49923. Surely you are not going to write down your own countrymen as incapable?—Comparatively. I think, in industrial matters. Not, I think, from their own fault, but in industrial and economical matters my fellow-countrymen are far behind the people of other countries.

49924. For which they are not to blame themselves?—So long as they are told that they will remain behind.

49925. I think you must insist on telling them, because historic facts substantiate our view. Let me observe that to put an end to congestion it is necessary to apply compulsion, and suppose that only the fit and the capable got the land so acquired would you then apply compulsion?—I don't like compulsion in any form.

926. We have compulsion already in many forms. ave it in connection with railways, and in con- on with the Labourers Act passed last year. e country has approved of compulsion in these , why should Parliament and the country hesi- to approve of compulsion in cases equally if not urgent?—I could show very good reasons if I ght it right to trouble the Commission with an ment of analogies. The analogy is defective and ld show it to be so.

927. Let me suggest to you that is more rtant to people to live than to travel?—Every- wants to travel; only a class want land. ybody requires to travel, only a class can hold , and the community require, as a right, that holder of the land should make the best use of land in the interests of the community as a e. and whatever leads to that result ought to ncouraged. It might in one case mean com- ion; in another it might not. But usually, in economic expediency of the case, it has been found dly that interference with freedom in these things operated against the successful use of the land its resources.

928. Let me suggest that the interests of the munity, as a whole, entirely depend upon the cultural prosperity of the community?—I don't it that.

929. Let me suggest that anything that would ease the prosperity of those who follow agriculture ld have the result of increasing the prosperity of country as a whole?—I don't admit that the try depends upon agriculture wholly.

930. Would you kindly suggest, considering that ave no other industry in the country, what is the s upon which the fabric of Irish life rests?— nly agriculture.

931. Practically entirely?—There is a population bout 600,000 in the North of Ireland who don't nd on agriculture at all. That is only one mple. You have everywhere through the country e portion of the community living by non-agricul- l industries, and necessarily so, as you cannot a community without them.

932. Take your own province. Kindly tell me u what the towns live, if not upon the agriculture he province?—The people live nowhere wholly by culture. They live here by it more than elsewhere almost wholly, and of course industry here is e exclusively agricultural than anywhere else. s is one of the drawbacks of the country.

933. I quite agree that it is a great misfortune we have not greater industrial enterprises; but I not right in suggesting that those who live upon ustries other than agriculture form an infinitesimal t of the population?—They are not infinitesimal; they are small, but to make that as a basis of anything for the future would be wrong, because it is a lop-sided and insufficient basis of society economically, and before you can have a normally growing social structure you must have it represented by the industrial basis all round. *Aug.* 28, 1907. Mr. P. D. Kenny.

49934. You said it was right to apply compulsion in the case of the acquisition of land for railways?—Yes.

49935. And that it was equally right to apply compulsion to obtain land for labourers' cottages?—No; we did not discuss that.

49936. Suppose in a country like this that it was in the general interests of the community that land should be acquired compulsorily and given to tenant farmers compulsorily, would you not think that, that being so, it was a sensible thing to acquire land?—I don't think that is so. I cannot admit the basis of the question.

49937. In what do you differ from it?—In that the free use and transfer of the means of production is far more favourable to the good of the country than any form of compulsion.

49938. Are you aware that in Queensland the State has resumed, at fair prices, the possession of great tracts of grazing land for the purpose of closer settlement?—Yes; but I notice it is individualising property in the land all the time.

49939. That is the very thing we want to do in this country?—Then, if I were to admit the compulsory transfer of land owned by one man to another man, it follows that I must defend the right of somebody to come to-morrow and compel the man to whom it is given now to give it up again.

49940. Quite so. I quite agree with that proposition. Let me suggest to you that the land is the property of the nation, and if the public interest requires the resumption of land at any time by the State, why should it not be resumed?—The land rightly, ethically, ought to be the property of the nation.

49941. That was the view of your friend the late Mr. Davitt?—Yes; but I find, on examining it, that the ownership of the land, as land, is not 1-15 as much as the production of the land under intelligent treatment, and I am more concerned with the 14-15ths than with the 1-15th.

49942. Don't you think, if it is right for a progressive country like Australia to resume possession of the land it would be very sensible to pursue a similar policy in this country?—I think we ought to provide our analogies at home. I am not sufficiently acquainted with Australia to be able to give an opinion on the matter; but I am opposed to taking anything that is any man's from him by compulsion. I should not like it to be done to myself, and I will not recommend it for my neighbour.

Mr. GEORGE TAYLOR examined.

943. Sir FRANCIS MOWATT.—You wish to make a ement in reference to some evidence that has i given?—Yes. I am agent to the Marquis of Sligo. ch reference to a statement of Mr. M'Namara's, I ld like to say that he has not stated the conditions nt the number of years purchase. In the year 7 the Congested Districts Board entered into otiations with the fourth Marquis of Sligo for the pose of purchasing Kilteever, containing 53,000 es. The conditions were eighteen years' purchase 1899 of tenanted land, 70 per cent. of which was t term rents, and thirty-two years' purchase for grazing land, and fifteen years' purchase of kelp. s the Board was not prepared to give, and the otiations fell through. I think they offered some- ng like sixteen years', and I think thirty for zing land, and ten years for the kelp. Then erwards, in the year 1900, Lord Sligo asked the ard if they were going to finish off the matter, and y said they had no money. In 1901 they wrote that y had got money, and asking would he take any- ng less, and he said no. After the Land Act used, in 1903, in October they approached him in and said that on account of the bonus he ght come to terms. He was then in delicate health, l said he would have nothing more to do with it. died in December, 1903, and the present Marquis ming in quite new to the estate, had to take out title, and it is not completed yet. There is no re about it, but I thought it only right to make the statement for fear that the Commission would be actually under the impression that eighteen years' purchase without other conditions was offered. Mr. George Taylor.

944. Most Rev. Dr. O'DONNELL.—But you do not want so much to contradict what Mr. M'Namara said, as to supplement it?—Yes, and to correct his statement. Lord Sligo was not prepared to give his tenanted land for eighteen years' purchase unless he got thirty-two years' purchase for his grazing land, and fifteen years' purchase for the kelp; and he also stated that the third Marquis, his brother, offered Kilkeever for sale about 1883 or 1884, but then seventy per cent of them were rents that were not reduced at the time, under the Land Act of 1881.

49945. Do you think would there be a prospect of the negotiations being resumed soon?—I suppose there would, but I cannot say anything more. I only thought it right to make this statement.

Mr. M'NAMARA.—I have a circular as to the terms offered by the Marquis of Sligo after the first term rents were settled, about twenty years ago, and the deductions we would have got if we purchased then. The tenants did not agree, because they wished the small tenants to get an addition to their land too.

Mr. TAYLOR.—Yes, you might have been one of the 30 per cent. of the tenants who had got a first term rent fixed, but the majority of the tenants had not a first term rent fixed at the time the circulars were sent out.

Aug. 28, 1907. Mr. Thomas Moclair examined.

Mr Thomas Moclair.

49946. Sir Francis Mowatt.—Are you a farmer?—No. I am a journalist. I live in a congested district in the centre of Kilmaine Estate, near Castlebar. I am connected with the management of a holding on that estate belonging to my mother.

49947. Do you manage the holding?—Yes, especially in connection with the live stock and arranging the tillage on it as well. The Kilmaine Estate has been purchased by the Board. I am married to a daughter of the woman who owns the holding. The former owner of the holding died three years ago. I live about a quarter of a mile from it. I lived on it for a while after his death. There is only one son of the family at home. The two of us generally manage to run things together in connection with the holding. From an intimate knowledge of almost every electoral division in Castlebar Union, as well as from a fairly good knowledge of every portion of Mayo, I am of the opinion that the entire county should be scheduled as congested, and that the Congested Districts Board should be granted compulsory powers to acquire lands, as their operations at present are greatly hampered for want thereof. To instance a case in support of this argument I may mention the Kilmaine Estate, near Castlebar, which was purchased by the Board nearly two years ago. The area of this estate is 2,055 acres statute, the number of tenants is 93, the gross rental £532, the Poor Law valuation is £545, and the approximate population is 635 persons. The valuation of the vast majority of the tenants is under £5, and in no case does it exceed £10. The land is of the poorest quality, and most of the arable portion is cutaway bog and reclaimed mountain. The area of many of the holdings does not exceed three or four acres, and a large portion of the land is rundale. In one townland six families hold between them 28 acres, divided into 65 plots, the holdings of each tenant varying in size from three to seven acres, and on this small area a population of over forty people eke out a living, not one of the heads of the families going to England. One of these tenants, with three acres of land, pays £19 a year for five acres of grazing land in the vicinity; he keeps six cows, and manages to make what he calls a fairly good living. In an adjoining townland there lives a widow who has fourteen acres of land, about four of which is marsh; she rents six acres of grazing land, for which she pays £25. That was up to last November, when the Congested Districts Board took over this land.

49948. Most Rev. Dr. O'Donnell.—When you say none of the heads of families go to England do you imply that none of the sons go?—Not out of that particular village. Out of every other portion of the parish they did.

49949. Sir John Colomb.—The tenant with three acres of land who pays £19 a year is an eleven months tenant?—Yes. He is a tenant farmer who has acquired the tenant's interest, and he lets the grazing to four or five tenants there. This man keeps all his bit of land at home, about 3½ acres, in tillage, and on the five acres he keeps his cattle in summer. He hand-feeds them with green food, and has them practically at home the whole time in winter.

49950. This man pays nearly £4 an acre?—Yes.

49951. That shows the great value of grazing land in that particular district?—Because there is hardly any of it there. The convenience of it, especially for milch cows, is worth a good deal, to have it near home. This woman to whom I have referred keeps twelve cows, that is on the same system as the other, by means of hand feeding and grazing together—and she has managed to rear a family of fourteen, and to educate her family sufficiently well to enable some of them to fill good positions. These are the well-to-do farmers on the estate. Other tenants with large families have to live on three or four acres of cutaway bog; most of them own but one or two cows, and keep no other living stock. Only five tenants on the estate keep a horse, and some do not even keep an ass, and have to carry both manures and crops long distances on their backs. One hundred and twelve men and youths from the district go to England every year, and their average savings for the season amount to about £1,200. I obtained this information by consulting a man from each part of the district and counting up the number of men from each place. Some of them spend ten months of the year in England. The men leave home early in the year as a rule, and the women and children do most of the farm work at home, which means intense suffering and increased poverty for those poor people; but it is a noteworthy fact, illustrating their thrift, that there has not been a single recipient of outdoor relief in the district for years. Though the Board have purchased this estate without compulsory powers, they can do but little to encourage the thrift or industry of the tenants, or to improve the condition of those who have to eke out a livelihood at present on a small patch of bog or mountain. Sixty years ago, on an adjoining estate, over forty of the present Kilmaine tenants lived on 927 acres in the Townland of Derryharriff; 1848 came, and with it the dread famine; the tenants could not pay their rents that year, and were turned out in a single day by the landlord, being forced to erect shelters for themselves and their families in the bogs and hill of the adjoining Kilmaine Estate or else seek the shelter of the Workhouse, while their former homes were razed to the ground, and Derryharriff was given over to bullock and sheep, being converted into a grazing ranch by the landlord. The Congested Districts Board have now acquired possession of this farm, and, as some of the former tenants are still alive, it is possible that they or their sons may be re-planted on the land from which they were evicted sixty years ago. But in the interval which has elapsed since the clearances in '48 the land was allowed to run waste, drainage and manuring being neglected, so that the Board can now give but six new holdings and sixteen plots (for additions to the holdings of as many tenants) on the area of 927 acres where forty families resided sixty years ago. The Board have also acquired a second grazing farm of 62 statute acres, which it is also proposed to divide into plots for addition to existing holdings, so that about forty tenants will get relief from the existing congestion; but unless the Board obtain compulsory powers the lot of the remaining fifty-three tenants will be no better than before. There are hundreds of acres of grazing lands in the vicinity of the estate which can be acquired if compulsory powers are granted, but the owners have not signified their intention of disposing to the Board under the voluntary system. There is one very large tract of grazing in portion of the demesne, and a great deal of it is let to graziers on the eleven months' system. It is almost at the end of the estate. There is more land on the town side of the estate. I don't know the particular tenure on which it is held.

49952. Most Rev. Dr. O'Donnell.—You have not conveyed that the owner has refused to sell that land, but simply that you have no indication that he will?—The fact remains that if they got a fair chance at all of buying at any kind of a price I am sure they would have bought. There are other places in this union on another estate, Keelogues, almost as bad, and within a very short distance of it is Ballyvarry, which is good grazing land.

49953. Do you know that large estate?—I don't know the tenure, but I know it is paying land. There is another very poor property between the mearing of Castlebar and Westport Unions, up in the mountains, Sherabeen. The valuation is very low, and the tenants are very poor. They cannot even grow a bit of oats or even rye on any portion of their holding to make thatch for their houses. For some reason or other the Board has not been able to get any chance at it. At a sitting of this Commission in London some months ago a Mr. Boyd, representing the Landowners' Convention, described the people of the West of Ireland—I won't be certain as to the exact words—as a lazy and thriftless people. The Kilmaine Estate furnishes a striking example of the inaccuracy—I will not use a stronger word—of this statement. Since the Board acquired possession of the property they have carried out extensive works in fencing and drainage; and if Mr. Boyd were to visit the district in mid-winter he would meet scores of brawny sons of toil working up to their waists often in mud and water, for the lucrative wages of 9s. a week. The people in general throughout Castlebar Union favour the Congested Districts Board far more than they do the Estates Commissioners. They

confidence in the gentlemen who compose the , and also in its local officials, and were the to be done away with and the Estates Commis- s appointed to discharge its functions, it is the n of many that such a change would be detri- l to a speedy settlement of the problem of re- congestion in the West. The Board's officials metimes hampered in their work by the refusal ne obstinate tenant to migrate even a short dis- from his old home, even though he is offered a better holding. Discretionary powers for the lsory removal of tenants should be vested in the to meet the requirements of such cases. I am of two cases in Castlebar, one in particular in een division, in which a delay of nearly two occurred owing to the action of one of the s.

4. That tenant was a woman?—Yes; and in r case the tenant was a district councillor, and s equally obstinate. The Board should be em- d when they purchase lands in the vicinity ns, or in districts where there is a large popu- of young men, to vest about four acres of land h places in the hands of trustees, the land so to be used for the promotion of healthy exer- such as the old Irish games of hurling, foot- tc. Such a move would tend to improve the al powers of the people generally, and would towards keeping country boys from seeking nervating influences of publichouses in towns their day's work is done. I think that that matter which requires some consideration.

t Rev. Dr. O'Donnell.—It seems to be a very le suggestion.

6. Sir John Colomb.—Do the boys generally the enervating influence of public-houses?— will be boys no matter in what part of the but if you give them a chance of enjoying lves outside they won't go inside. In Achill nday one of the witnesses said that the Board not purchase land at all unless they got it heaply than they got the estate under discus- t the time. Our complaint is that they won't cause they don't like to give too high a price. n was offered for sale last week adjoining the ine Estate. There are five or six tenants on ilmaine Estate who have very small holdings, enerally have to pay £5 or £6 an acre for wing on this farm. They were quite prepared e it for the price realised at the auction. into account the annuities payable to the Commission, and the interest on the purchase it totted out to about £2 an Irish acre. They uite willing to do so, but they might find a ty in finding the money for the purchase.

7. Was it the occupation interest that was put Yes, but was the tenants' interest in a holding sed through the Land Commission.

8. It was an annuity farm?—Yes.

9. Was it brought before the Congested Dis- Board that this farm was for sale?—Yes.

49960. What was the annuity of the farm?—£28. *Aug.* 28, 1907.

49961. What was it sold for?—It was not sold at all; £905 was bid for it. It did not reach the reserve. Mr. Thomas Moclair.

49962. It is still open for sale?—Yes. The tenants put next it are quite prepared to pay £2 an acre for it.

49963. Mr. Bryce.—What was the name of that farm?—Flynn's farm. I live on three acres of another paying farm, and on account of living in the district I don't want to say anything about that. The Board is in negotiation for the purchase of that at present. To show the industry of the tenants in the district, I may mention that the people on portion of the estate, on a mountain part of it, have been engaged in sprouting for early potatoes for years and years, before ever the system became popular in any other part of Ireland. They have been at it for twenty-five years, which shows their anxiety to make a few shillings extra by their industry.

49964. Most Rev. Dr. O'Donnell.—Were the late frosts not against them?—This year they were, unfortunately.

49965. That is an indication of their industry?—Yes. Here is another indication of industry. Some of the people of from £6 to £7 valuation bought milk from their neighbours, and along with what they had themselves, sent it up in daily supplies to Dublin, but they could never wait to get their money back. It might, perhaps, be two or three months before they would get the cheque for their milk, and they had to drop it on that account. In connection with Mr. Rutledge's suggestion in his evidence today as to dividing grass lands up into holdings, your lordship said it would have been a good thing if it had been done in time. The only time it was attempted in Mayo was when an estate was about being sold to the Estates Commissioners. The landlord tried to get the double interest in the estate by striping up the land at first, then selling the tenant right of the holdings at eight or ten years' purchase, and then selling the whole thing over again to the Estates Commissioners, but the game was stopped in its infancy.

49966. Sir John Colomb.—You tell me in working out the figures that the tenant was willing to give thirty-two years' purchase for that farm?—Yes, but the reason is that they have only between four and five acres of land away in from the road. This place is next to them. They buy hay and pay between £4 and £5 an acre for it.

49967. It would be a great convenience in the enlargement of holdings?—Yes.

49968. And for that they would be willing to give thirty-two years' purchase?—Yes.

49969. Mr. Kavanagh.—Do you think they would make it pay?—That would be a matter for themselves.

49970. They would not give so much if they did not think they would make it pay?—There are very few fools in that part of the world.

Mr. Alexander Larminie examined.

1. Sir Francis Mowatt.—You have sent in a let* in which you trace the history of what d up to the present condition of the country, is very interesting, but as I understand you, prove of the Congested Districts Board's work as you have had experience of it?—Very

2. Then you are not one of the strong advocates pulsion?—No. I think very strong reasons be given before compulsion should be resorted very effort of inducement should be used before lsion is resorted to.

3. Do you think it can be expected that the vner should agree to sell his land at a price would diminish the income that he had been omed to receive?—Certainly, I do not, unless some other compensating advantages.

4. What is your main objection to compulsion, ecause the landlords will not sell at a loss to lves, and that compulsion may be applied to them—do you think that that is objectionable? dedly. It goes without saying.

5. But on the whole you prefer to see congestion with by the Congested Districts Board than other body you know of?—Certainly.

49976. And you are generally satisfied that they work upon good business-like sound serviceable lines?—I would not suggest much improvement. Mr. Alexander Larminie.

49977. You do not altogether look at emigration within reasonable limits as such a very great evil?—I do not see how you can get on in this country without it under existing circumstances. I wish I could.

49978. Are you satisfied that the educational system in the country is the best for agricultural districts, or do you think that the nature of the training and the methods of teaching are capable of improvement?—I think that they are capable of vast improvement. They are almost in their infancy. At present there is scarcely any education. That is a great want in this country—a thoroughly good agricultural education with object lessons.

49979. Am I right in putting this construction upon your general view that although you have no fault to find with the Congested Districts Board, and you think that their work is very good, yet when you look to the future you see the double necessity now of bringing up the young to understand how to manage the farms and to work them with intelli-

* See p. 200 *et seq.*

Aug. 28, 1907.

Mr. Alexander Larminie.

gence and knowledge?—Indisputably I think the present system is about the worst in existence.

49980. You say rumour has it, and apparently on good grounds—I don't know what the apparently good grounds are—that the Board will be amalgamated with or absorbed by the Estates Commissioners, and you proceed to argue that you can see no reason why the Congested Districts Board should be so absorbed, and you bear testimony to the manner in which they have done their work up to now?—Yes.

49981. Therefore, we may take it from you your evidence is that the Congested Districts Board should continue to be the authority for dealing with the congested districts, and that its means of doing good should be increased by increasing its funds?—Certainly, by an increase of its funds and an increase of its discretion.

49982. You look as far as possible to the diminution of emigration and an improved education, which would enable a larger proportion of the people in congested districts to make their living there?—Certainly.

49983. Beyond that you don't think it is possible to go?—No. I think that the prices of agricultural produce are so very bad that agriculture does not pay at all.

49984. Most Rev. Dr. O'Donnell.—Don't you think it might pay the small occupier?—I do, as far as he can support himself by his own work; but if he has to pay for labour it cannot pay.

49985. But the small occupier would have a great deal of labour within his own family circle?—Yes, if he waited for them to grow up.

49986. They are not grown in every family?—No.

49987. In that view don't you think it would be good economy to have much of the land of Ireland that is under grass, that is to say, second and third-class land, brought under a system of tillage, the occupiers being small farmers?—Tillage properly carried out will improve most of the land. It will improve land and increase its productiveness, but the only question is, does it repay the labour?

49988. Take it that intensive cultivation was introduced and that there was a practical system of agricultural education for the young, don't you consider that it would be well for the country as a whole that much more land should be tilled?—Yes, I think so.

49989. If we had arrived at that stage of practical agricultural education, and intensive cultivation consequent upon it, do you not think that many of the population would be provided for who now emigrate?—I do not, because it is only the redundant members of the family who emigrate. Very few families emigrate.

49990. Under a system of cultivation more men would have employment at home?—That is so, as long as they are unmarried, and do not start fresh families of their own. They might, perhaps, wait until they were middle-aged men before they started on their own account.

49991. It is obvious that if the whole land were under tillage the surplus population even then would emigrate?—Yes.

49992. When you speak of emigration with approval, I take it that that is not the class of emigration that has prevailed up to this?—I don't speak of it with approval, but I think it is a necessary evil.

49993. Was it not a sad thing to have so many people going away without any practical education?—Yes. The misfortune of the emigrants is that they are sent away half educated.

49994. It is a sad thing to have so many people going out of the country, leaving so much of the land of the country not properly utilised?—That really has been led up to by events over which we have no control.

49995. Sir Francis Mowatt.—I would like to ask one question, a continuing one, of great importance. You assume that a labourer cannot make a living in this country. That is to say, while a small holder whose family work upon the holding can make a living yet he cannot afford to hire labour at a living wage which would support the labourer from his own work. I think it is very important that it should be carefully considered. We have been told by a succession of witnesses that to put a great deal of additional labour into the soil, would treble the output from that ground, and I personally should be very sorry to be persuaded that the time would not come when a man without sufficient land to provide for his own family will be able to obtain a living wage for work with the farmers. You, I gather, have made up your mind that that is not likely to occur?—I don't think it is.

49996. You don't think that the land is capable of a higher class cultivation, which will so far increase the output of it that they can afford to employ labourers outside their own family at a living wage?—I don't think they can, to any considerable extent, considering there is nothing that they can sell to advantage. There is only the one crop still in Ireland that you can cultivate with profit—that is the potato. There is no corn you can grow that really pays for the cultivation

49997. Then you have cattle?—Yes, but it is not profitable to anything like the extent that it was twenty years ago.

49998. Let us assume what was impressed on us to-day, the possibility of stall-fed cattle in this country, fattened up and sold straight to the butcher: don't you consider that that means a very large increase in the number of labourers employed growing green stuff, turnips, mangels, and so forth?—That in every other country in the world, is done by labourers who are paid for it, and live upon it.

49998a. Is there anything peculiar in Ireland that makes that impossible?—It has been tried over and over again by the most intelligent and wealthy farmers, and they have always given up cultivation.

49999. You go so far as to say that tillage is not a practical outlook except on small farms?—I think so.

50000. Are you speaking of Ireland or of the West of Ireland?—Principally of the West of Ireland.

50001. I can only hope you are wrong?—I hope so sincerely myself, but I speak from very long practical experience.

50002. Mr. Bryce.—You are under-agent for Lord Lucan?—I was under-agent over forty years ago, and head agent since 1872.

50003. I don't quite understand the second last paragraph of page 5 of your pamphlet, in which you say you also broke up and measured the holdings?—Holdings that were originally limited perhaps to two or three families in common, and in the process of times these became twenty, thirty, and forty families. That is the origin of the rundale holdings, of which we heard so much to-day. The landlord is, in no respect, responsible for the rundale holdings, except by the fault of omitting to take powers to prevent it. Under the old arrangement he could not prevent it because where leases were granted they contained no special restrictive clauses. These leases were made over 100 years ago.

50004. Mr. Sutherland.—The landlord could have put in any condition he liked in these leases?—Yes. Unfortunately the clauses against sub-division was omitted.

50005. Why was such an important thing omitted?—I suppose that the importance of it was not considered at that time. Over 100 years ago rural life was a very primitive matter in this country

50006. Is this the process: when a man cultivated a new piece of land his rent was raised?—Not under these leases. The leases that I speak of were in existence on an average fifty years without any change of rent.

50007. These pieces of land were being reclaimed meantime?—No. Some of them may have been reclaimed or improved.

)008. Sir JOHN COLOMB.—On Lord Lucan's estate policy of breaking up a large area into small ings did not succeed?—I think it was a success.)09. I am glad that I asked the question because impression on my mind was otherwise?—Lord n carried it out practically as the Congested Dis- s Board has done, except that he could not under- great improvements, buildings, and so forth. nk I have put it clearly in my pamphlet. With d to the area under the power of the Congested icts Board, I think that it is not sufficiently ed. We find that occasionally the Estates Com- ioners and the Congested Districts Board overlap, I think that that is unfortunate, and would sug- that the whole of Connaught, with a few of the ern and southern counties, should be put en- y under the Congested Districts Board.

)010. In what way have you found the overlapping he two Departments in the same district detri- al?—I cannot give you fully individual cases, I know cases; for instance, the other day, where was a meeting of tenants, they fought over the tion whether the estate should be sold through the Congested Districts Board or the Estates Commissioners, and I think that that had a very unfortunate effect on the minds of the people. I think that agricultural education is the great want in this country. We have very little of it. We have the Agricultural Department doing something but nothing very practical. They have no educational farms. They have small experimental plots. These are so very scattered that they have had very little effect on the general public. What you want is to teach the young men how to work the land to the greatest profit. One of the most important questions, particularly for the West, is that of the fishing. That is the one industry that can be developed almost to an unlimited extent in this country, and I think that not nearly enough attention is paid to it. The people want piers and harbours on all parts of the western coast, with assistance—I would have nothing in the way of free grants—in such ways as loans for the purchase of boats and gear. I know that it is done at present to some extent, but not on nearly large enough a scale. I believe it is the greatest source of wealth we have in the West of Ireland, if properly developed.

Mr. Thomas Gallagher.

Mr. THOMAS GALLAGHER examined.

)011. Sir FRANCIS MOWATT.—Are you a farmer?— I farm nine Irish acres. My valuation is 7*s.*, and my rent £9. I am selected by the nacon and Ballyglass Branch of the United Irish ue, and am well acquainted with the condition he small farmers on the different estates in this ict. There are, in the parish of Carnacon, about tenants, and of these about nine are economic, or £15 valuation. Nearly all the remainder occupy ings ranging from two to eight acres, some even The result is that they are able to live and their rent only by labouring in England, and on y which is sent by children and friends in rica. Where these are not forthcoming, for in- e in the case of a man with a large young family, the condition is very poor. These small tenants ot care very much to purchase their holdings under circumstances as it would not materially im- e their condition.

)012. Why do you think that it would not materi- improve their condition?—Because if a man with or three acres of land purchases without getting nlargement he leaves himself no enlargement to

)013 Although he would pay a smaller sum in his uity than he now pays in rent, and would gradu- become the purchaser of the freehold of his pro- y?—It would not improve him much unless he an enlargement of the small portion that he now s. These men have been constantly toiling the e small patches, which, as a result, become worn and enfeebled, and are rendered very liable to to disease, especially in a wet season. In con- ence of the smallness of their holdings they have ake con-acre from £3 to £4 per acre a year, and leaves them very little for their labour. The only dy is to enlarge their present holdings by the ac- ition and distribution of untenanted land. There in this district, over 1,400 acres of untenanted suitable for this purpose, which could be allocated out removing them from their present homes, ex in very few cases, and even in these few cases tenants would be still living in the very same oundings as heretofore. These lands referred to are ated at Castlecarra, Burriscarra, Golforth, Mount- sant, and part of the Towerhill property, also of the Moorehall and Waterford Estates, and are n this district, but they cannot be acquired with- compulsory purchase.

)014. How do you know that they cannot be ac- ed without compulsory purchase?—Because the lord has been approached and will not sell the s lands.

)015. Who is the owner?—Mr. Moore.

)016. Sir JOHN COLOMB.—Did he tell you he would sell the grass lands?—I heard it a long time ago the tenants belonging to Mr. Moore.

)017. You don't know of your own knowledge?— I only heard it from the tenants. To improve the condition of the small tenants and give them enough of the land to live on in terms of moderate comfort I advocate strongly the application of compulsion for the sale of these lands, of course, at a fair compensation.

50018. I suppose you mean by fair compensation such a sum as would ensure the landlord neither more nor less than his previous income?—If he was very near his net income he would be well off. I think that the Congested Districts Board would be the best body to entrust with carrying out this matter. This district is not scheduled as congested, but all Connaught should be scheduled. The bogs are all worn out.

50019. You say that of your own knowledge?—Yes. I refer to the bogs in my parish. The people have to go to outlying districts and buy turf at great ex pense. The lowlands are all flooded during winter, as the drainage has been altogether neglected. Lough Carra is not allowed to empty its waters into Lough Mask. Two landlords are the cause of this, as they hold the water to beautify their demesnes.

50020. Have they dammed the rivers or what?—They have, many years ago, at the time of the drainage. There is a battlement of from five to six feet against the wall.

50021. How long ago were these made?—I could not give you the date, but it was the time of the drainage. I am sure it was forty years ago. It was made by Mr. Moore, of Moorehall, because Lough Carra comes close up to his house, and the demesne is within 400 yards of it. If this battlement were broken down it would strand a great deal of the shore on him and he should make another boathouse. He has one made convenient to him; but that is drowning the whole country. The floods are all leaving us without turf and pasture.

50022. You say that in consequence of these small holdings these tenants have to take con-acre at from £3 to £4 an acre?—They have.

50023. They get that from neighbouring farmers?—From these graziers and the landlords. The grazing lands are held by outsiders.

50024. What do you call outsiders?—People outside the parish.

50025. Do you mean that nothing should be owned in the parish except by people inside it?—No; but these big farmers come from outside.

50026. Most Rev. Dr. O'DONNELL.—Would the land be suitable for cultivation?—The best of land.

50027. Mr. KAVANAGH.—Would you let anybody outside the parish come into it?—The local people who need the land most should be supplied first in every place.

50028. Sir JOHN COLOMB.—You spoke about an economic holding of £15; is that valuation or rent?—Valuation.

Aug. 28, 1907.

Mr. Thomas Gallagher.

50029. On an average, what extent of land would that represent?—It may be fifteen or sixteen acres. Our valuation is high. Valuation and rent come very close.

50030. Do you mean that the rent would be about £1 an acre?—It is not valued at £1 an acre, but we would have fifteen acres of land of the valuation of £15.

50031. Mr. Bryce.—You are talking of tillage land?—Yes.

50032. In addition to that there is some mountain land attached?—Not in our district.

50033. Then, if the holding consists of fifteen acres at a rent of £15 that means that the rent is £1 an acre?—Yes; and in some cases £1 5*s*.

50034. Then it must be very good land?—Yes, but the rent is very high. They raised the rent of the land. They brought out the reviser.

50035. The valuation of the land has not been revised for sixty years?—It is not sixty years since it was revised on our property.

50036. Sir John Colomb.—The valuation was made by Griffiths in the forties and fifties. The valuation of the land has never been changed.

50037. Mr. Sutherland.—You are thinking of the valuation of the Land Commission?—No, but I mean the valuation of the holding. I clearly understand what I am saying, because when I was a boy they brought out the reviser and he raised the valuation of the holdings in some cases from £4 to £5 5*s*.

50038. Sir John Colomb.—Not on the land, but the valuation of the holdings, which included houses?—The valuation of the holdings.

50039. The valuation of the land has not been changed for fifty years?—What difference does it make to a man if he has to pay it all the same?

The Commission adjourned.

NINETY-EIGHTH PUBLIC SITTING.

FRIDAY, AUGUST 30TH, 1907.

AT 11.0 O'CLOCK, A.M.

At the Courthouse, Claremorris.

Present:—The Right Hon. Sir FRANCIS MOWATT, G.C.B. (in the Chair); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; Most Rev. Dr. O'DONNELL; JOHN ANNAN BRYCE, Esq., M.P.; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. PATRICK J. KILLEEN examined.

Aug. 30, 1907.

Mr. Patrick J. Killeen.

50040. Sir FRANCIS MOWATT (*in the chair*).—You represent the District Council of Claremorris?—I am Chairman of Claremorris District Council.

50041. You have a precis prepared, and as you proceed we will ask you questions on that. With regard to the first point, as to population and valuation, you will bear in mind, perhaps, that we have all the statistical figures, and we will not trouble you to repeat anything that is not essential to your argument?—I will be thankful if you will allow me to proceed in the order in which I have arranged my evidence, as it will be easier for me to give it in that way.

50042. Very well?—The valuation of the Claremorris Union is £44,729. It comprises three dispensary districts, viz.:—Ballindine, £16,050 5*s.*; Ballyhaunis, £13,081; and Claremorris, £15,597 15*s.* The population, according to the census of 1901, was 25,820, made up from Ballindine Dispensary District 7,239, Ballyhaunis Dispensary District 10,879, and Claremorris Dispensary District 7,702.

50043. Sir JOHN COLOMB.—Does the total population include the town?—25,820 persons.

50044. That includes all?—Everything. The valuation of the union at the time of last census 1901) was £43,972, which shows that the valuation has increased £757, whereas the population must have materially decreased during the past six years.

50045. The valuation has increased?—Increased.

50046. That is on the valuation merely of buildings?—Well, I will go into that just now. There are nineteen electoral divisions within the union, viz.:—Ballyhaunis, Bekan, Claremorris, Cloghermore, Course, Culnacleha, Kilvine, Knock (North), Knock (South), Loughanboy, Murneen, Ballindine, Ballyhowley, Caraun, Crossboyne, Garrymore, Kilcolman, Mayo, Tagheen. The first-mentioned eleven are scheduled as congested; the other eight divisions should be scheduled as congested. Before going into the scheduling of districts, I wish to draw the attention of the Commissioners to the increase of valuation in the union, which I attribute to new buildings, especially those new improvements raised by the parish grants given by the Congested Districts Board. In many instances where there has been an addition or renovation of a poor man's home there has been therewith an increase in valuation, and several farmers have therefore refused to accept of parish grants, lest they should have to pay an extra charge, which would mean, as the rate now stands in this union, a yearly tax of £1 2*s.* 1*d.* on every £5 increase in house valuation. There should be a remedy for this taxation; because unless the Irish peasant sees clearly that it costs him nothing to become improved he will make no effort toward improvement. The entire Claremorris Union should be scheduled as congested.

50047. Most Rev. Dr. O'DONNELL.—By that statement about the Irish peasant, you mean, I take it, Mr. Killeen, that he would not like to be taxed on his improvements?—Well, you know the rate on houses in this union is 4*s.* 5*d.* in the £, and if he throws up a bit of a shed which will cost him £8 or £9, or perhaps £7, the reviser will come round and put down a valuation extra on the holding, and he will have to pay 4*s.* 5*d.* per £ extra during the year. The Irish peasant does not like that thing.

50048. He has much more objection to being taxed on his improvements than to contribute to the improvements?—Yes; that is quite so.

50049. You are aware of that?—Yes.

50050. You are also aware that it is the universal rule in England and Scotland as well?—Well, it is the landlord, I have heard, that pays for the improvements in England.

50051. Mr. SUTHERLAND.—The taxation is on the improvement?—Yes. There should be some remedy for it, because farmers are chary here to take parish grants on that account.

50052. You know that is a general question common to the whole country, this system of valuation of land?—Yes; but you know it is hard if a man is taxed from the fact that he builds a bit of a house on his land.

50053. I quite understand?—And he therefore improves the general appearance of his domicile by that fact, and puts on a very neat colouring of red upon zinc, and that tends to the improvement of the entire place.

50054. And it lessens the burden of taxation at the same time on the man who makes no improvement?—Yes.

50055. Sir FRANCIS MOWATT.—As I understand, the Irish peasant has the same feeling on the matter as all others. We do not like to be taxed more on houses than we can help?—Quite so.

50056. And if we improve our houses they become more valuable, and therefore they are higher taxed?—Certainly.

50057. And it is not the Irish peasant alone who objects to that?—Well, you are dealing with the Irish peasant now, sir. Anybody can get a grant from the Congested Districts Board but the Irish peasant, do you see, sir.

50058. Yes?—The entire of Claremorris Union should be scheduled as congested. In the eight divisions which are not scheduled there are about 11,000 acres of grass lands valued at about £5,800.

50059. You say they should be scheduled as congested. Do you give any reasons for that?—I will further on. Of these 11,000 acres, 3,324 are owned by Lord Oranmore and set to graziers. There are several villages very congested in the districts not scheduled, for instance, Caraun Electoral Division. In the village of Cuilmore 274 people are huddled together in bad land valued at £298.

50060. Two hundred and seventy-four people?—Yes, on £298 worth of land. We have also in the village of Garryredmond 145 people on a valuation of £173; in the village of Meelickbeg 30 people on £30 valuation; in the village of Meelickmore there are 96 people on £75 15*s.* valuation; and in the village of Tootagh there are 80 on a valuation of £65.

50061. Most Rev. Dr. O'DONNELL.—Adding all these together, the aggregate would be less than £1 per head on the valuation?—Quite so. In Mayo Electoral Division, in Corskeagh there are 36 people on a valuation of £39; in Corlisland 17 people on a valuation of £3; in Derronell 65 people on a valuation of £51. In the Tagheen Electoral Division, in Ballydaff there are 81 people on a valuation of £73 10*s.*; in Knockbrack and Lanaboll 37 on a valuation of £49 10*s.*; in Sessaugh 71 on a valuation of

Aug. 30, 1907.

Mr. Patrick J. Killeen.

£80; and in Tagheen (East and West) there are 70 people on a valuation of £100. And in Ballindine Electoral Division, in Killeen, I will add, 120 people on £111 10*s.* valuation. These are a few instances of facts that I will lay before the Commission.

50062. And if you take the valuation of the grass lands out of the total valuation, these electoral divisions, which are now excluded, would come within the definition of congestion?—Yes. My evidence will clearly show that the rest of these are not less congested. These villages can get no benefits from parish grants, etc. The Parish Committees have proved a great boon to most parts of the country. Their working has helped to change for the better the physical features of many villages and introduce ideas and practice of sanitation hitherto unknown—at least unobserved. People are instructed in the hygienic advantages of admitting pure air into their houses; they use windows larger in size than heretofore, and capable of being opened for ventilation purposes. Then the rules that govern the giving of grants of money to any householders require that the manure pit should be removed from its familiar place before the door to a safe distance, and if possible out of sight. Some jealousy has existed as to the difference of the amounts given to some parishes, and the monies which go to each Parish Committee should be meted out in such a way as to prevent any jealousy. By all means give the grants to those most deserving; and let me here again impress upon the Commission the necessity of having the whole of this union scheduled as congested, because it is evidently perfectly unfair to have people unbenefited by such grants and allowed to remain in their original state of want of taste in their homes for the simple reason that their villages are surrounded by big grazing farms where the valuation is great and the population almost nil.

50063. Mr. O'Kelly.—What do you mean by people unbenefited by grants?—People who cannot get the grants, who cannot derive any benefit from them.

50064. What particular class?—People living in non-congested areas.

50065. Now, you spoke about having the whole county or province scheduled?—The whole union.

50066. Tell me what your idea is as to what would be a fitting description of congestion?—Well, I think the 30*s.* average valuation per head is entirely too low, because the average family in Connaught is taken as five, with the result that the average valuation per family would be £7 10*s.*, which is entirely uneconomic. I would suggest that the amount be doubled.

50067. Would you rather agree that the definition of congestion should be changed and made a matter of discretion for the Congested Districts Board or any future body who may have to deal with congestion?—Well, sir, I have seen by the evidence in other places that it has been proposed that all Connaught should be scheduled as congested. That would provide for and take in the Claremorris Union. There is a great necessity for it, and I wish very much to impress it on this Commission. This union is very congested.

50068. I should like to know exactly what your definition would be. When you talk of congestion you talk of it in places comparatively near hand. I want you to suggest what your definition of congestion would be?—Where there are holdings less at least than £10 valuation.

50069. Do you take £10 as the limit?—£7 10*s.* is the maximum at present. That is entirely too low, and if you fix £10 you would make the value on each head £2, instead of 30*s.*, as at present.

50070. Might I suggest to you that it would be far better to allow the Congested Districts Board a discretion in this matter, and not to decide on any definition that might be based upon the geographical area or population of Claremorris?—But would not that work out? That is what I speak of.

50071. I am anxious for your view?—Yes, if the Congested Districts Board got the power that you mention, that would really deal with these villages which I am naming. Of course they could not deal with the grass farms that are lying on one side of them, because there is no congestion on a grass farm.

50072. Most Rev. Dr. O'Donnell.—It seems to be your point that in those electoral divisions which are not now scheduled there are many occupiers as poor as any in the scheduled area?—Actually so.

50073. And you think it a hardship that these grants cannot be made available for them?—Yes, I do really.

50074. And if there was some provision for scheduling those districts, then, through the parish grants and through enlargement of their holdings, the condition of the people might be improved?—Certainly.

50075. Mr. O'Kelly.—Yes, my lord; I quite follow your point. What do you mean, Mr. Killeen, by parish grants?—Those parish grants given by the Parish Committee through the Congested Districts Board.

50076. How would that affect the alteration of the definition—it has nothing at all to do with the alteration of the definition of congestion?—I say that those people who are living in places such as the village of Killeen, or Ballindine, which is the most congested village, could get no money from the parish grants, because they are not scheduled as congested, and I consider that a grievance and a hardship.

50077. Just this last question. I do not like to press it any further. Of course you quite agree that there must be some change in the definition of congestion, some alteration?—Yes.

50078. And that the 30*s.* test is too low?—Well, it is low.

50079. May I suggest this to you, that it would be wiser to say that the Congested Districts Board is free to apply itself to congestion wherever, in its view, congestion exists, rather than have a definition that might exclude districts comparatively prosperous, but where, at the same time, congestion in one form or another is found?—I see your point, sir. Well, you would go more closely into the working of the people themselves, but your contention would lead to what I want just as well.

50080. Well, would you agree with my suggestion?—I would, sir.

50081. Sir John Colomb.—As I understand you, what you advocate is that the Congested Districts Board should have the power to deal with congestion anywhere?—Quite so, sir.

50082. That would make the Congested Districts Board operate all over Ireland?—I am speaking of this union, sir.

50083. Mr. O'Kelly.—If I may interpose a remark, the question I addressed to Mr. Killeen referred entirely to the province of Connaught?—I am speaking of this union, sir. I am not going to deal with anything outside it, because I do not pretend to know anything else outside this union, and I do not deal with unions I may know nothing about.

50084. Sir John Colomb.—You confine your remarks to this union?—Yes.

50085. But in laying down a general policy, and dealing with a principle, no Government and no Department can take a view merely of the union, but must consider congestion wherever it is found, and you are fixing your eye on this Union, while this Commission will fix its eye, as you can well imagine, on the general question?—I quite understand.

50086. We are to understand your evidence as confined to dealing exclusively with this particular union?—Every union, I imagine, in Connaught will have fully as much good from it as Claremorris. It means the same thing in every union. And I am sure you have often heard, since you have sat on the Commission, evidence that the unions round here are all nearly in the same condition.

50087. I always find that some way or other all the witnesses seem to fix their eyes on their own particular locality?—Yes, sir.

50088. And they do not seem to trouble themselves much with what occurs at a distance?—Well, we do. We in Mayo, I believe, are very much interested in the political affairs of the country; but I might be told afterwards, if I went into the Irish scheme as a whole, that I ought to deal with the things that I am supposed to know. People might say I was going on too large a scale.

50089. Sir Francis Mowatt.—I should like to put that in a short form. You give your evidence as regards this union that you know?—Yes.

50090. Let other witnesses give evidence as regards the unions they know?—Yes.

50091. And it is the province of this Commission

put that evidence together and draw a general nclusion from it?—Quite so, sir.

50092. That is the object, I understand, of your niting your evidence to the union?—Quite so, sir.

50093. Sir JOHN COLOMB.—You think it is a bad stem that parish grants cannot be given to any an over £7 valuation?—I do not know that I have id that.

50094. I merely want to give you an opportunity of saying what you think?—You see e Congested Districts Board have taken the erage for each family in Connaught as five, d, therefore, each family, in order to have scheduled as congested could not have a greater luation than £7 10*s*. Of course there may be milies that have a valuation of £15 getting parish ants, because the district would be scheduled as ngested, but I do not think that those grants are ven to people with £15 valuation; they are nerally given to the poorer people—I hear so.

50095. But you wish to see areas scheduled in order have a parish committee in them?—Yes, sir.

50096. And one of the reasons you gave us was that parish committees could not offer rewards for the moval of manure heaps because the district was not heduled?—That is not the way I put it, sir, but said that the rules that govern the giving of a grant money to any householder require that the manure ap should be removed, and you cannot get a grant om the parish committee unless your manure heap removed to some place away. That shows that the rish committee puts in their heads the idea of anliness.

50097. But you agree in that view?—Oh, yes, tainly.

50098. Mr. KAVANAGH.—The rule is that in giving parish grant they cannot go over a certain valuaon?—Yes.

50099. What is that sum?—I think £7 10*s*.; I lly am not sure. All these grazing farms are of ellent quality for tillage purposes, and the people, ere congestion exists, live, for the most part, on low-lying bad lands. Some years ago the tenants und Ballindine approached Lord Oranmore with iew to buying their holdings, and he agreed to sell parts of his lands around Esker and Ballindine, ich were in an unreclaimed condition; but he had idea of parting with the rich grazing land, on the a (he said) that he would not be as well remerated, nor would his income be as great as it under the present system. About the same time must have entered his mind that his eleven months' zing tenants were becoming rich working his land the grazing system, because he took over the ches himself and stocked them, under the efficient nagement of a steward named Grant. This man, ant, seemed to know his business thoroughly, s a very experienced judge of cattle and sheep, and dently appeared to make the business pay; but er a few experimental years Lord Oranmore disased with his services, and returned to the old system eleven months' grazing letting. The fluctuations in cattle market damped his ardour on more than occasion, and his profit and loss account must ve shown him the great expense incurred in the ving and selling of beasts on such a large scale, l that cattle and sheep feeding could be more cessfully worked by several graziers than by an lividual rancher. So I say that were the landds themselves allowed to stock their grazing ranches l work them as the graziers do now, we would l them, after a short time anxious to hand over ir lands to the Congested Districts Board, at a r price—say twenty years' purchase. Lord Oranre was far more successful at letting portion of land in con-acre than in his grazing experiment.

50100. Mr. O'KELLY.—What do you mean by enty years' purchase—twenty years' purchase of at?—On the rent.

50101. Twenty years' purchase of the fair rent of grazing lands?—No, sir; I could not fix any idea what would be the fair rent on grazing land, ause there is a difference in the price of grazing d. One year it might be worth 30*s*. an acre, and other year only 22*s*. 6*d*. But what I mentioned, ut twenty years' purchase—and I am glad you ed me—I mentioned in connection with a case ere Nolan-Ferrall sold a property to his tenant. e rent was £5, and he got twenty years' purchase a first term rent, which means that he got £100 on a £5 tenancy. Thus he got three years' purchase which made that £115 on a £5 tenancy.

50102. What do you mean by three years' purchase?—The three years' purchase is the bonus.

50103. I want to know what particular kind of rent you are referring to. You spoke of twenty years' purchase, and I want to know whether you are referring to first term rents?—First term rents; and twenty-three years on second term rents.

50104. You have been referring to Lord Oranmore?—Yes. I do not understand how the Congested Districts Board or the Estates Commissioners have valued the grazing land they have bought up to the present. I could not solve it, and I have not asked any of the officials of either body to tell me about it.

50105. I do not want to prolong this, but I only wish to ask, when you are speaking of 20 years' purchase are you referring to Lord Oranmore's grazing ranches or to his tenants' property—which of the two?—Twenty years' purchase will mean that he is to get 20 years' purchase of the rent of the grazing land as well as of the tenanted land.

50106. I want to know how it is, by what process of reasoning or of calculation have you arrived at the conclusion that 20 years' purchase all round, for judicial rents and for grazing rents, is fair and equitable?—By the figures of a £5 tenancy I have worked it out, and I think Lord Oranmore should be compensated by getting 20 years' purchase on a £5 tenancy. He would be just as well off as he is now. But I admit that I am unable to form any idea how the price is fixed on grazing lands. Of course Mr. Doran and Mr. Stuart, of the Estates Commission, are, I am sure, well able to do that. They have more skill, and I imagine they have looked into the question of how to lay down a price. But if you give a landlord 20 years' purchase on a £5 tenancy you give him £100, and you give him three years' purchase; that is the bonus, which means £115. That £115 invested at 3½ per cent. would bring him yearly £4 0*s*. 6*d*., whereas he gets £5 from the tenancy as it stands, if the tenant be a good tenant, and he has to pay 10 per cent. of the £5 for collection; whereas, if the tenant again brings him into court he will reduce the rent by 3*s*. in the £, with the result that one would meet the other.

50107. Sir FRANCIS MOWATT.—Do you consider that in purchasing a landlord's property it would be a proper thing to give him neither more nor less than his net annual receipts over a series of years?—Well, I do not know if that would work out fair to people who would buy the land afterwards.

50108. Well, that is another question, because it does not follow that they should bear the loss. What I want to get from you is this: Do you think that in any national improvement which the State carries out a man from whom you take property should receive a sum equal to that which he received net from the same property in previous years?—Well, it would be unfair to ask the landlord to hand over his property from the landlord's calculation entirely.

50109. Carry that one step further, and I will do it at this stage, that we may understand each other. If the State carries out a great national improvement, you agree it should be done at the expense of the State or at the expense of one or other of the two parties to the bargain. You see, the State comes in to help in the bargain. Lord Oranmore we will take as the landlord, and anybody else as the tenant. He is satisfied and the tenant is satisfied. If it could be shown that Lord Oranmore got equal value for what he was giving up he should have no objection to sell?—But then the tenants insist that the landlords want too much.

50110. Yes, naturally?—But you know the landlord should give way a little there.

50111. And perhaps the tenants?—Well, the tenants have been paying for the land.

50112. Let us suppose that I purchase on behalf of the tenant, from the landlord, and that the landlord gets the net income he has been receiving?—Yes, sir.

50113. And that when the tenants have been put upon the land there will be a loss on the transaction. Now, should this loss be borne by the landlord or by the tenant, or generally by the State. That is the question?—It is a hard question for me to answer.

50114. You see it has got to be faced?—It has got to be faced, and the landlord should bear a portion of it, unquestionably.

Aug. 30, 1907.

Mr. Patrick J. Killeen.

50115. And the tenant?—Because the landlord has been getting the money from the land, and the tenant has been paying for the land, whereas the landlord never bought the land.

50116. Sir JOHN COLOMB.—One minute, to follow that up. You started with this illustration, that Lord Oranmore's reason for not selling his land at a price offered was simply that the price would not give him an income the same as he had before?—He said so.

50117. Very well. Do you not think, to follow up Sir Francis Mowatt's question, that the State cannot expect that any man, for State purposes, should suffer loss. Do you not think if you were Lord Oranmore you would do the same?—I think so.

50118. And would you not think it very hard that in carrying out the State policy you were to suffer?—Yes, sir.

50119. And therefore somebody must do it; and I do not know whether you thoroughly understood what Sir Francis Mowatt asked you, which was this: As someone has got to suffer, it should not be an individual or a class, but it should be the State as a whole. Do you agree with that?—Well, if the State suffers the State must be paid. And who pays the State?

50120. Sir FRANCIS MOWATT.—I put it in this way: This is a national improvement for the benefit of the State?—Quite so.

50121. And the national improvement involves the settlement of a bargain between two parties?—Quite so, sir.

50122. You say that in the settlement of that bargain there may be some loss on the whole, and the question is, whether, that being for the benefit of the State, that loss should be borne by the State generally, or whether it would be fair that the State should impose on one of the parties to the bargain the whole of the loss, and on the other the whole of the gain?—The landlord gets money for his estate. He is out of it. It is the tenant who steps into his shoes, and the State bears a loss in order to pay the landlord an inflated price.

50123. Well, there is a question about that?—To leave out "inflated"?

50124. Do you say that the sum to produce the net income of the landlord is an inflated price?—Well, the landlord should give way in some of it.

50125. Sir JOHN COLOMB.—And the tenant should give way?—The tenants have given way.

50126. Mr. O'KELLY.—You spoke about landlords getting their income less 10 per cent. for the expenses involved in the administration of the property. Would you tell me how you arrived at that figure?—I took it as a natural thing that out of every £100 collected he would give 10 per cent. to collect it.

50127. And your natural conclusion is based on what knowledge?—On the knowledge that the agent must be paid, and paid respectably.

50128. And I know that the agent must be paid and the staff on the property must be paid. I only desire to ask you on what particular knowledge you base your statement that 10 per cent. represents the outgoings of the administration?—I have really no knowledge to base it upon, but what I have heard, just.

50129. Mr. KAVANAGH.—Was that not the terms of the Land Conference?—Yes, sir; I think it was.

50130. Mr. O'KELLY.—I quite agree. If you said at once that you saw it in the report of the Conference I would not press the matter any further, but I would suggest that people differ on that subject from those who subscribe to the Land Conference Report?—Quite so, sir.

50131. Do you think that the Irish land is as good security as the security people find in gilt-edged investments?—I would not think so.

50132. And you would not think it because on that property when the next judicial rents are being fixed there may be as great a reduction as we have experienced in the last two judicial fixings?—Well, perhaps there may.

50133. Mr. SUTHERLAND.—One question with regard to the price to the landlord for the land. Are you satisfied in your own mind that in the prices they are asking they are not including the tenants' improvements?—The landlords are asking 27 and 28 years' purchase, and when the Congested Districts Board or the Estates Commissioners come in they make improvements and the tenants have to pay.

50134. I am taking the price of land at the present time. Is there included in that value any confiscation of tenants' improvements in the past?—I do not follow your question.

50135. The land of Ireland has a certain selling value because it is improved?—Yes.

50136. Did the landlord or the tenant do that improvement in the past?—Well, it is not the fact that the land improved that makes the greater price.

50137. What has increased the price, then?—I think the fact that cattle and sheep-rearing has been more lucrative in these years than it was when the Canadian cattle were allowed to come in.

50138. But if the land is now any better for cultivation is not that an improvement?—I do not know that it is better for cultivation now than ten or twenty years ago.

50139. I am not talking of twenty years ago, but 200 years ago land had a price in Ireland?—Yes.

50140. And it has increased in value?—Yes.

50141. And the land has been improved?—Yes.

50142. Has that been done by the landlord or the tenant?—I am sure I do not know. There has been a change in the country entirely. Fifteen or sixteen years ago very few tourists came into the country, but there are many now, and the country is improved by the fact that it is picturesque.

50143. Most Rev. Dr. O'DONNELL.—I do not think you quite understood Mr. Sutherland's question. Before 1881 many tenants reclaimed their holdings?—They did.

50144. And since 1881 some of them have reclaimed their holdings?—They have.

50145. Since 1881 has it been possible for the landlord to put rent upon the tenant's improvements?—Yes.

50146. Was it possible to put rent on improvements made before 1881?—I do not know.

50147. Well, I think you will find that it was not possible for the tenant to secure improvements made before 1881?—Oh, before 1881, as far as I have read and understand, if a tenant round here made any improvements he was charged extra rent.

50148. Mr. SUTHERLAND.—That is the point, and that is claimed now as the property of the landlord to be sold, and it is alleged that that has inflated the price?—Certainly, sir.

50149. Mr. KAVANAGH.—But in fixing second term rents, are the tenants' improvements taken into account?—Well, I have not an idea what is the procedure of the court.

50150. Is not that so?—I do not know, sir. I know that in this part of the country generally when men improved a place and reclaimed the land then they were put out. The landlords have evicted them out of it.

50151. Mr. SUTHERLAND.—Then, as Mr. Kavanagh has put the case, they are not rented on their improvements since 1881, but they were rented on improvements before 1881?—Quite so.

50152. That was really the cause of the passing of the Act of 1881?—Quite so.

50153. And the price demanded by the landlords includes those confiscated improvements of the tenants before 1881?—I think so. Since 1881 there were several valuable estates sold at 17 or 18 years' purchase, and the landlords were perfectly satisfied to have it at that then.

50154. Mr. KAVANAGH.—But the prices you refer to were on the first term rents, not on second term rents?—On the second term rents there will be a greater number of years' purchase than on the first term rents.

50155. Mr. O'KELLY.—Why should there be a greater price on second term rents?—It seems that what is called a first term rent is a place that would not be brought into court at all, or only once; but a second term rent means a further reduction, and generally there is such a thing as 3*s.* in the £.

50156. Does not that second term reduction represent a decrease in the value of the property?—I suppose so, sir.

50157. Then why should there be a greater price on the second term rents than on the first?—Well, it is a known fact that we have twenty years' purchase on first term and twenty-three on second.

50158. I only desire to suggest to you that there should not be any difference, because the very fact that you have a reduction in the fixing of second term rents means that you are buying a property diminished in value?—Then if you had all one term rents you would not be considering the tenants who

in different circumstances on properties, because tenants have only gone into court once, and when buy their lands on twenty years' purchase on first term rents they get 7s. in the £ of a reduc-

159. Where does that happen?—On the Nolan-all Estate—7s. in the £.

160. Under the Act of 1903?—Under the Act of I know it. And they got 5s. in the £ reduc-on the second term rents, or twenty-three years' hase; that is how the figures work out.

161. Sir JOHN COLOMB.—Do you admit, or do you admit, that second term rent is the rent, after ig credit to the tenant for all his improvements. you, or do you not admit that in fixing second rents, the landlord takes these into consideration ppraising the landlord's income?—No sir. They into consideration the tenants' improvements, of se.

162. They don't base the landlord's rent upon tenant's improvements at all. Is that so?—The llord's rent on tenants' improvements—since 1881 have not done that.

163. Now, I just want to take you over your ulation to illustrate this with regard to tenants' l, but before I do so I want to ask you this—Is r is it not the fact that in many cases of grazing hes, the landlords in the past spent con-rable sums of money in their improvement?—I not know sir. I know that some of them are ng to improve it now by letting it out in con-tillage—improving the quality of the land.

164. I am not talking of that; but I am talking actually reclaimed land and that sort of thing. are not aware that any landlords have done that? ot to my knowledge.

165. But supposing that it was proposed to take e grazing lands from the landlords, in pursuance a great State policy, and supposing that the land-proved that himself or his predecessors in title spent money on that land, and that its state of fection was owing to their expenditure on that l, do you think the landlord ought to receive com-sation for what he has done if that land is taken he State. I ask you, supposing the grass land in hands of a landlord to be wanted for the purposes the State, would you take into consideration, in ng the price, the fact of proof having been sub-ted to you that a large sum had been expended his predecessor in title on that land which had ught it to its present state of efficiency. It is a ple question?—It is hard to answer it by yes or

166. You cannot answer yes or no?—You take land as it stands now, sir; and, of course, if the dlord has improved the place he has got the benefit that improvement, for the simple reason that the ue of the land is improved, and he has got that. y valuer will say that, and he will lay on it the ue, not of forty years ago, but of what it is worth y.

167. But taking the stretch of land to be enormous, l that the landlord shows you that that can bring a large sum of money owing to his improvements the past, do you mean to say that it is fair of the te to take that land without giving him a capital that will pay him at least the same income that is receiving from it?—I do not think it would be y.

168. Mr. O'KELLY.—Do you remember a case in County of Mayo of improvements such as Sir John referred to, that were made by the landlord?—ll, I cannot think of any just now, sir. There no case before my mind.

169. Mr. BRYCE.—Since the Act of 1903 was sed there has been an increase in the prices paid; there not?—There has been an increase in the ces paid.

170. Under the Ashbourne Act land was sold at ut 16 to 18 years' purchase?—Fourteen to eigh-n.

171. Of first term rents. And when the Act of 3 was passed there was a higher price?—Oh, yes; to 25.

172. Since the Act of 1903 has come into force re has been a further rise, I understand?—They asking more for the land now than ever they re asking before.

173. Even after the passing of the Act?—Quite sir.

174. Can you explain that?—Well, the Irish people have had a land hunger, and they have been anxious to get possession of the land, and the landlords have withheld from co-operating with the Land Act of 1903, and they say that the longer they hold the more they will get. The tenants, in some cases, to my own knowledge, have been too anxious to acquire the land, and where there is an anxiety on the one part and withholding on the other there is a natural tendency of the market to improve. It is just the same as if a man had twenty or ten cattle at a fair and was not anxious to sell them, and then he would get more in the evening for them. He would know that if he held on long enough he would get more for them in the night.

175. Mr. KAVANAGH.—Does he always succeed in that?—Not always, of course, in the cattle market, and I hope not in the land market either.

176. Mr. BRYCE.—In the meantime you suggest that the landlord has made a profit by holding out?—He has made more out of the Land Act of 1903 than the tenant has.

177. I want to try and get from you an explanation of what has puzzled me, why, immediately on the passing of the Act of 1903, there was so considerable a rise of prices as has been found; and secondly, why, since the operation of the Act of 1903 has gone on, those prices have gone on continually rising?—Yes.

178. I want to get from you, if I can, as full an explanation of that fact as possible, because there is a good deal of dispute about it?—I do not mean to say that the land has been improved since, but the very fact that people have been so very anxious to buy has affected the prices.

179. I suppose they were equally anxious before the Act?—I do not think there was so much anxiety. At any rate I cannot remember, and it seems that there was not, under the Land Act of 1881, any anxiety to take advantage of it; and some of the landlords sold at 17 or 18 years' purchase; and still there were no negotiations between the landlords and tenants. The very fact that there has been a land hunger in Ireland for the last six or seven years, or ten years, is the main cause of the inflation of the prices.

180. But there has been always a land hunger in Ireland, has not there?—Well, there was not so much as recently.

181. There was not the same opportunity, perhaps, of gratifying it; but why should this rise in prices and this increase of land hunger have so suddenly developed?—It was the land hunger that developed, and the prices developed after it.

182. At all events there is no doubt of the fact that there is a tendency here, as well as elsewhere, of prices to go up?—It is an absolute fact.

183. Sir FRANCIS MOWATT.—I am sorry to interfere, but this extremely discursive examination has kept us to the first subject on which the witness was asked to give evidence, and we must try a little to curtail our inquiries or we cannot get through anything like our list of witnesses. Go on, please?—For years the men and able boys from around Curraghadoney, Crossboyne, and Ballindine went annually to England, and there saved during the season from £9 to £12 each. I have known some to bring home as much as £15 and £16 after six months' hard work and privation. Now most of these men stay at home and till what used to be grazing land, and the competition for the land (which is sold in acres or thereabouts) is so great that it realises in some cases the enormous sum of £7 and £8 per acre. I would like to mention that the people who go to England from this part of the country have to put up with terrible hardships, because they live in out-houses and barns, and they have no beds to sleep in but a bag to roll themselves into, in places where Englishmen would not keep their horses.

184. Sir JOHN COLOMB.—Have you ever seen it?—No; for I was in England; but there are witnesses coming up before you who will prove that they had to do it themselves. At the prices that oats, potatoes, turnips, and straw are being sold at, there must be a loss to the man who takes the con-acre, because, generally, the crop is considerably damaged by rabbits and game. Lord Oranmore, therefore, reaps a three-fold benefit; he gets £4 to £6 per acre for his con-acre, his game is fattened at the tenant's expense, who gets no reduction whatsoever even if

Aug. 30, 1907.

Mr. Patrick J. Killeen.

half the crop be destroyed, and the land is materially improved by tilling. The men are not anxious to go to England and slave there, as they have to do; hence they stay at home doing this con-acre work in order to have some fodder for their few young cattle during the winter, and it might happen that the cattle would pay nothing for their winter's feeding.

50185. Sir Francis Mowatt.—You say that migration to England and Scotland has diminished among the men in this part of the country?—Just around here at Curraghadoney and Crossboyne. These two villages I mention particularly.

50186. Do you say it has diminished or has ceased?—Diminished. The shopkeeper is paid in a good many cases by the money that comes from America about Christmas, and the rent must come out of the few acres of land they have round their congested homes. Compulsory purchase is necessary to acquire the lands from landlords of this type—and unfortunately this class represents the majority. The landlords now want 26 and 27 years' purchase for what they were willing to take 18 years' purchase for ten and twelve years ago.

50187. Eighteen years' purchase on first term rents?—Yes, sir.

50188. The larger number of years' purchase is on second term rents?—Yes, sir, plus a bonus which will add on three years more. Captain Sheffield was willing to take 18 years' purchase; now he wants 25.

50189. Eighteen years on first and 25 on second term rents?—Yes.

50190. Most Rev. Dr. O'Donnell.—Are you perfectly sure of that reply to Sir Francis, our chairman. He asked you whether in every case the smaller number of years' purchase was on first-term rents and the larger number on second term rents?—There have been cases, my lord, where on the first term rent it was 14 years' purchase, and 17 years' purchase on the second term.

50191. Sir Francis Mowatt.—But in the case that you were mentioning you contrasted seventeen and twenty-five?—Seventeen and twenty-six or twenty-seven.

50192. I want to know. Seventeen on first-term rents and twenty-six on second?—That is the contrast I made.

50193. I think you said that the decrease between first and second term rents was 3*s.* in the pound?—2*s.* is the difference from first to second. A man buying at twenty years' purchase on first-term rents would get a reduction of 7*s.*

50194. Sir John Colomb.—About what date was this eighteen years' purchase transaction?—About 1898 or 1899 or 1900.

50195. Now the tenants who bought then had to pay 4 per cent. on the money?—They did not. I think they paid 3¾.

50196. The landlord was paid in Land Stock, was not he?—Yes, sir.

50197. Are you aware that at that time Land Stock stood at a premium, at £112, so that when the landlord got £100 of Land Stock he was really getting £112?—I am aware of that, and I am aware that he got three years' bonus, which made it £115 as against £112.

50198. Therefore there are other considerations to be taken into account when you make a comparison between property offered at 18 years' purchase and property offered now—the decrease in the value of the Land Stock, and the tenant having to pay less interest now. Those two things, and the fact that the rents now affected are second term rents and that then, generally, they were first term rents?—Yes.

50199. Mr. O'Kelly.—You are quite aware that the landlords, instead of getting depreciated Land Stock now, which is selling at 80, are being paid in gold plus the five years' bonus?—Three years' bonus I made it. It may be four. And there is another point. I think the best way to calculate it is that £100 worth of land under the Act of 1881 would not always be worth the same amount as it is under the Act of 1903.

50200. Most Rev. Dr. O'Donnell.—I am going to ask one question about a particular case to which you referred. You stated that the terms were 18 years' purchase on first-term rents. Then you mentioned that since the Act of 1903 the terms had risen to 25 or 26?—28 years they want.

50201. And the bonus?—And the bonus.

50202. Now, in that case that you mentioned of twenty-five or twenty-six years' purchase, had you a definite estate before your mind?—Yes, I had; th tenants told me.

50203. Are you perfectly sure they were not secon term rents?—First term rents. I do not think tha they went into court since.

50204. I should like to know definitely?—I do no know.

50205. I should like to know definitely whethe these were all second term rents?—They were all firs term rents.

50206. In the case of the larger price—of th twenty-five or twenty-six years' purchase?—It is th same circumstances exactly.

50207. Do you say that in each case they were firs term rents?—Yes. There was an inflation of eigh years' purchase.

50208. And in both cases, the eighteen and th twenty-five or twenty-six years' purchase, they wer first term rents?—Yes.

50209. Are you sure of that?—Well, I am not sur of whether the tenants went into court since or not but there has been an inflation in the price anyhow

50210. Now the fact is stated, and I suppose there cannot be any doubt that for a good while Land Stock was at a premium during the progress of transactions under the Ashbourne Act?—Yes.

50211. However, the premium of 12 per cent. would be fairly compensated by the bonus now?—It would be amply compensated by the bonus now.

50212. Then do you not think that in the case of an owner selling his land, any money which he did not require for his immediate purposes he could invest to good advantage?—It is worth £87 now, I think, or £86.

50213. If you had £10,000 to invest you could in vest it at great advantage?—You were sure of your income.

50214. Then I suppose that under the Act of 1903 an owner might clear off his mortgages?—Certainly.

50215. These are some of the advantages?—They are great advantages to some landlords, because there are some landlords paying 6 per cent. on their mortgages, whereas if they were able to clear off these mortgages through the operations of the Act of 1903 they would not have to pay any person.

50216. Sir John Colomb.—Are you a farmer?—I have one farm—I graze about twenty-eight acres.

50217. Any other business?—I am a shopkeeper.

50218. You have a shop, and you are holding grazing land besides?—Yes, sir; it is my mother has it.

50219. What is your main business—grazing or farming?—Well, shopkeeping.

50220. Have you got a spirit licence?—Yes; my mother has got the spirit licence.

50221. But it is in your shop?—Yes, sir; I live there. It is the duty of the Congested Districts Board to see that the tenants enter into no foolish bargains, because on the estates that are bought out and divided, under the Board, the tenants find it hard to live in moderate comfort and pay their annuities. On the Isidore Bourke Estate complaints are made that many of the farmers who have received increased areas of land are not improved in their condition, because the new rents are such as these poor people are unable to pay. Increased charges, in the shape of rent and high valuation placed on their houses, will prove veritable millstones sure to drag them down again to a condition of hopeless poverty. Well, I have a few instances here of where they find that the rent is too high and the value too high, and they can hardly get on on it. James Regan, Curraghleigh—the area of his holding is twenty acres, including four acres plantation, rent £18 0*s.* 2*d.*, valuation £18 5*s.*; John Reaney, Curraghleigh, eighteen acres, rent £16 2*s.* 6*d.*, valuation £11 15*s.*; Thomas Lavelle (herd on the farm Ballybeehenry), area 19a. 0r. 4p., rent £9 15*s.*, valuation £11 13*s.* 2*d.* There was no house built for this man, still he paid £40 fine.

50222. Sir Francis Mowatt.—Let us take these as examples; do not give us a list; the time is passing?—These are a few examples.

50223. Most Rev. Dr. O'Donnell.—Are those enlargements?—Yes.

50224. Do you not think those men ought to make a great struggle to meet the rent?—They are making a great struggle.

50225. And you would encourage them yourself to make the most of it?—Yes.

50226. Do you not think that it is a great advantage

the small Irish farmer to get some addition of land to his holding?—It is.

9227. If he is not expected to pay in full for the nt-right of the addition to his land might he not ct that his annuity would be something higher?— never complain of that, but they don't like their nity to be too high, considering the quality of the l. In this particular estate there was a kind of ion of the land by the official who was in charge , and he went round to the tenants, and he said— you don't take this there is another fellow looking it, and he is willing to take it."

9228. Mr. O'Kelly.—Who was the official?—Mr. lean.

9229. Most Rev. Dr. O'Donnell.—A thoroughly ient officer. Do you know how much a small ner will pay to another one for tenant-right?—).

9230. And if a man getting an enlargement is not ged for tenant-right he cannot expect that his nity would be as small as if he always held the nt-right of that land?—It would not be fair.

9231. Then if he got a house built or improved nay be charged something for the building of that se or the improvement of that house?—Yes.

9232. Mr. O'Kelly.—You say properly that it ld be the duty of the Congested Districts Board ee that the tenants enter into no foolish bargains? es.

9233. I quite agree with you. Have you any of whether the Congested Districts Board in this of the country adopted that excellent sugges- ?—I think they did not. There were some cases re they paid too much for the land.

9234. Would you think that 49 years' purchase he valuation was too high a price to pay?—I ld.

9235. And paying that must necessarily involve new tenants in responsibilities that they may afterwards be able to discharge?—It would be d for peasant proprietors to live in comfort and the annuity.

9236. Do you think the Congested Districts Board d up to the spirit of your view?—It could not said they did.

9237. Most Rev. Dr. O'Donnell.—What exactly our view?—My view is that the Congested Dis- s Board, the inspectors, or somebody representing Congested Districts Board, should take part in sale of the land by the landlord and the buying he tenant, because they have to do with the land five or six years afterwards, and they ought to be best judges of how the tenants will be able to live the land when they come to divide it up between n.

9238. Mr. O'Kelly.—I want to press this a little her. Does it seem to you that 49 or 50 years' chase on the valuation was an inflated price. I am not going to suggest that the Congested tricts Board did that in all cases, but that they it in a particular case, and transferred their gation to people who might not be able to redeem n. Do you agree with that—that when they ght property at, say, 49 or 50 years' purchase the valuation it was at a price that will involve se to whom the Congested Districts Board trans- ed their obligations in responsibilities that they not be able to meet?—Yes.

9239. Most Rev. Dr. O'Donnell.—I want to know t is the property for which the Congested Dis- ts Board paid 49 or 50 years' purchase?—Yes. I k Mr. O'Kelly has a particular estate before his d.

9240. Mr. O'Kelly.—I would rather not mention —I think Mr. O'Kelly has a particular sale be- his mind.

9241. Yes; you may take it from me. I have no bt it is so. I know they have given too much—— Most Rev. Dr. O'Donnell.—Really I must sist in this. A public body like the Congested tricts Board, that is doing very difficult work, is itled to a great deal of support, and when it is rged in any particular case that a very large sum that was paid for land, we want to be able to ng it to a test?—Well, Mr. O'Kelly has mentioned or 50 years' purchase.

9243. Mr. O'Kelly.—Of the valuation?—Of the uation. How far right or wrong he is I cannot

9244. Most Rev. Dr. O'Donnell.—But it is you o are giving evidence?—Yes.

50245. Have you any case before your mind in which the Congested Districts Board paid so much for land?—I do not really know as a bare fact that so much was paid, my lord.

50246. One other question. If a body like the Congested Districts Board is looking at poor people such as you describe, and anxious to provide enlargements of holdings for them, and is pressed by the public to find those holdings for them, do you not think that unless it has compulsory powers it will now and then, to relieve congestion, pay very big prices for land?—Well, I believe so. They will have to, certainly. The conditions of sale made between Mr. Nolan-Ferrall and his tenants have not been carried out by him or by the Congested Districts Board. On the day the terms of sale were agreed upon it was understood that from that day the tenants would be favoured with a reduction of 7*s.* in the £ on first term rents and 5*s.* in the £ on second term rents. To the disappointment of the tenants, these terms have not been observed, as the purchasers have been compelled to pay the old rent since (now six years), subsequent to the arrangement with Mr. Nolan-Ferrall. This is a decided grievance, and redress is hoped for from this Commission. That bargain went on on those terms, and it is five or six years ago since the bargain took place, and the tenants are paying the old rents since, and they think it is a grievance to pay, in some cases, £4 or £5 and taxes.

50247. Sir Francis Mowatt.—And is it a fact that the whole of the rents paid by the tenants are being expended by the Congested Districts Board in these improvements of their holdings?—Yes, sir.

50248. Therefore the tenants get the benefit of their own money invested in the best possible manner?—Some of them do, but in this case it happened that the landlord sold the estate to the tenants on the terms I say. It seems that there was some little friction between the landlord and the Congested Districts Board as regards the home farm belonging to Mr. Nolan-Ferrall, in Loughboy, but for years the Congested Districts Board collected the rents, and they still said they were not holding the farm or that the sale took place, because they had the agreement signed between Nolan-Ferrall and themselves, and the tenants thought it was too long to have to remain in abeyance for five years. I know they think it is too long to remain in abeyance for eight or nine or ten years.

50249. Most Rev. Dr. O'Donnell.—Has the title been completed in that case?—Just now.

50250. And you will make allowance for a body that could not proceed till the title was completed?—But they collected the rents.

50251. And they made improvements?—Well, they made improvements only.

50252. Is it not a difficult thing to make improvements when you are not sure that the property will be left with you?—Yes. You cannot start making improvements.

50253. Mr. O'Kelly.—Might I suggest this to you, that when the Congested Districts Board are purchasing congested property, and when they find that they may not be able to make any settlement of that property without acquiring the grass land adjoining, do you not think that when the grass land adjoining is to be used for the advantage and benefit of those particular tenants, the Congested Districts Board might take the tenants into their confidence as to the price which they should pay?—That is so, sir.

50254. Has that ever been done?—Not to my knowledge. They should not pay any price, I say, for an estate which the tenants will not be able to live comfortably on afterwards. They should take the tenants into their confidence.

50255. Most Rev. Dr. O'Donnell.—That is a different thing. I want to know this, and I want to have this clear; I think that when there is a question there should be something definite, and I must complain of everything which cannot be substantiated about the Congested Districts Board buying property on which there is untenanted land. How can the tenants be taken into confidence about enlargements which are not yet fixed?—No; they are not taken into confidence.

50256. How could they?—They could not, really, as I understand, but they could be taken into confidence as to the price which should be paid for the land when the Congested Districts Board were dealing directly with the landlord.

Aug. 30, 1907.

Mr. Patrick J. Killeen.

50257. Certainly, and they ought to be?—They ought to be, certainly.

50258. Mr. O'Kelly.—And if you have property A that is congested, and property B that is a grazing ranch, and if property B is to be utilised for the purpose of improving property A, do you not think, considering that the responsibility of paying the annuity would afterwards fall on the tenants, that it would be wise for a popular body like the Congested Districts Board to take them into confidence, or to take the more intelligent of the tenants into confidence, as to the price that ought to be given, which would involve them in responsibilities they might not be afterwards able to meet?—Quite so. I say they should know all about the price.

50259. And to that extent you would modify your answers?—The answers I gave to his lordship and to you were of two different classes.

50260. Most Rev. Dr. O'Donnell.—I am perfectly satisfied you see your way in the matter. If a quantity of untenanted land were being bought, undoubtedly there would be men in the locality who could give an opinion as to its value for the enlargement of holdings, and they should be consulted?—Yes.

50261. But to consult every tenant before those tenants knew what those enlargements were to be would be a futile operation?—I think the fact that every tenant was consulted would stop the progress of the sale.

50262. Mr. O'Kelly.—I agree with his lordship on that, and let me again say this, that I did not mean to suggest that every single tenant on a property should be consulted; but I merely suggested this, that the more intelligent of the representatives of the tenants, in a case of the kind might be taken into the confidence of the Congested Districts Board, so that afterwards, when the enlargements were made and the annuities fixed, the tenants would not be in a position to say that they did not know that the responsibility fixed upon them would be as large as it was?—That would be a very proper procedure, sir.

Sir Francis Mowatt.—I think a question has arisen on which I must ask the Commission to consult for a moment in the next room.

The Commissioners having returned after consultation,

50263. Sir Francis Mowatt.—We have retired for a moment to discuss what would be our best plan to enable equal justice to be meted out to all the witnesses here with the time at our disposal, and save a little labour. We have been a little more than an hour and a half over this first head of your evidence, and I am quite sure you realise that it would be impossible to go on at that rate. I do not at all complain of the loss of time on your part; but we propose to do this: We will give you another quarter of an hour, and we will, as far as possible, exercise a self-denying ordinance, and ask you no questions that we do not think absolutely necessary. As regards the witnesses who are to follow, we must ask them to bear in mind that we have really only a certain amount of time to distribute among them, and that they must not think that we are not treating them with full consideration if we are obliged somewhat to curtail the time of the evidence which they have to give?—During the quarter of an hour that I have to give the rest of my evidence I will deal entirely with the drainage of the River Robe, and it is the most important portion of my evidence. I would respectfully ask the Commission to inspect, where possible, the River Robe. This river flows through a large portion of this union, and the lands around its banks are liable to extreme flooding, not only in the winter months, but, on account of the almost incessant rain, the summer months also. The Congested Districts Board has done much towards draining the country, and there is no doubt that drainage is very necessary, considering the surroundings and the nature of the land. Most of the minor rivers drained in this union by the Congested Districts Board flow into the Robe, so I contend the Robe River itself should have been the place in which the drainage operations should have been started. The people look forward to this Royal Commission as the means whereby this end can be attained, and manifest an individual interest in the effective drainage of this river. It rises in the Dillon Estate, in the parish of Bekan, flows through estates now in the hands of the Board, including Nolan-Farrell and Tighe Estates, and there are several it passes through which I hope to see ere long in the Board's hands—Oranmore, Knox, and Fitzpatrick Estates, for instance. From Lough Mask to Tagheen, a distance of about twenty miles, the river was deepened and improved by the Board of Works, under Lough Mask Drainage Board, some forty-five years ago. This is now under the supervision of Drainage Trustees, therefore the responsible drainage area would be from Tagheen Bridge to around Brickens. The land adjoining the river from Tagheen to Lough Mask is apparently in an improved condition, whereas the portion not under drainage is thoroughly water-logged. The part of the river between Tagheen and Brickens requires deepening, widening, and improving, because it takes the water from the congested electoral divisions of Claremorris and Clogher-more, by means of tributaries which in themselves attain a large size in these divisions. If the river bed were lowered at Lord Oranmore's demesne an effective fall would be obtained for the upper reaches as far as Brickens. Lord Oranmore consented to allow the bed of the river to be lowered at Castlemacgarrett, and was willing to pay his share *pro rata* on his lands outside, but not on his demesne. The proprietors and tenants of the lands below Castlemacgarrett complain that the Board's drainage works on the upper reaches of the river have resulted in causing more frequent flooding, and allege that if Lord Oranmore consented to allow the river bed to be lowered they would take action against the Board. This shows that the drainage should be done as a whole, and not in pieces or sections, in order to effect what in a short time would mean the betterment of the entire district. The Congested Districts Board suggested that the work from Tagheen Bridge to the source could be done for £3,500, and agreed to contribute two-thirds of this sum, provided a Drainage Board were formed that would undertake to carry out the work in accordance with the plans approved by them and by Lord Oranmore, the Drainage Board to levy off the lands benefited one-third of the expenditure (£1,167), and also to be responsible for the proper maintenance of the river hereafter. The Claremorris District Council held a special meeting, and agreed to fall in with the arrangement suggested by the Congested Districts Board, but were unable to procure the necessary loan of £1,167 from the Board of Works, who refused the application pending the report of the Arterial Drainage Commission. That is all my evidence.

50264. Sir John Colomb.—Was any evidence given from this district before the Commission on Arterial Drainage in relation to this particular case?—I have a letter from the Arterial Drainage Commission. They were asked to take evidence about it, and they wrote regretting their inability to do so. They said their Commission was not formed for the purpose of going into special cases; but this Robe drainage would mean the betterment of this district in the very best way.

50265. Mr. O'Kelly.—The Congested Districts Board, I understand, offered to subscribe a certain sum towards the drainage of this river?—Yes, sir.

50266. A very generous sum, on condition that some local drainage board was appointed, and that local contributions were forthcoming. Is not that so?—Quite so.

50267. What happened to the committee that had that matter in hand?—There was a meeting of the District Council.

50268. I understand a committee was appointed?—I do not think there was a committee appointed.

50269. Let me suggest that there was. There was some kind of a committee appointed, including representative men from the entire district. Did that committee ever meet since the Congested Districts Board offered this sum, or take any action to get this generous grant on the part of the Congested Districts Board?—I do not think there was a committee appointed, so to speak, but there was a resolution drafted, and the thing was left to Father M'Hugh to arrange with the Board of Works and with the Arterial Drainage Commission.

50270. And what was the result of its being left to Father M'Hugh?—Father M'Hugh made an application to the Board of Works, and they refused the application, on the ground that the Arterial Drainage Commission was sitting at the time.

271. Do you not think that all this suggests ...e.' I do not say that you suggest that any blame ...d be placed on anyone, but we ourselves in this ... of the country are to blame for not having taken ...arge and generous offer on the part of the Congested Disthicts Board?—Oh, yes, sir; but where was the £1,167 to come from? We were refused a loan by the Board of Works. Of course, we were still to pay the interest on that sum back; but we could not do it. We could not procure any loan.

Mr. Thomas Heraghty examined.

272. Sir Francis Mowatt.—You reside in Ballin... and you say the Ballinrobe Union is as much ...ested as any other rural district in the county?—...

273. And therefore it ought to be scheduled and ...ght within the operations of the Congested Dis... Board?—Yes.

274. You say that the people are very miserable, ... you think that nothing short of compulsory pur... will ever get these farms to relieve congestion?...s.

275. And therefore you recommend that the Con...d Districts Board should have more power and ...nore facilities to purchase these places, and that ... are the only body, so far as you know, that has ... any effort to relieve congestion?—Yes, sir.

276. And you say that any farms used for grazing ...oses, although some of them may be judicial, ...ld be included under a Compulsory Purchase ... and divided among the congested tenantry of ...ownlands that would join such grazing farms; ... that the Estates Commissioners should not be ...itted to divide those estates they have purchased ...g the sons and daughters of the tenants on such ...es until the tenants who adjoin are first relieved ... congestion, and, if any remain, then let the ... and daughters of those people on the estate get ... is left after congestion is relieved. What do ... mean by "tenants who adjoin"—are those ten... who are on neighbouring properties, not on the ...cular estate then under administration?—...tly.

277. And you would say, therefore, that before ...ons of tenants have new holdings made for them ...small holders on surrounding estates should have ...margin that is available, not confining economic ...ngs to holders on this estate, but that they should ...ade available for tenants on adjoining estates?—...tly, that is what I mean.

278. Sir John Colomb.—Now, you advocate that ...s used for grazing purposes, although they may ...udicial, should be compulsorily taken?—Yes, I ...so.

279. What about a grazing farm held by a pur...ing tenant; would you take it from him?—A ...hasing tenant?

280. Yes?—There are none of them, as far as ...ow; but there is such a thing as a judicial farm.

281. I am not asking you that; but what ... said was that you would exercise compulsory ...rs upon judicial tenants, where necessary, on a ...n. Would you also exercise compulsory powers ...e tenant has already concluded a purchase?—Not ...e man has concluded a purchase.

282. You would except him?—Any tenant that ...concluded a purchase I would not; but there are ... things as farms that people have been evicted ... when the Land Act of 1881 was in passing, and ...cial tenancies fixed on those farms. I say those ...as should not be allowed to stand in the way of ... hase.

283. Still you have not answered my question ... there may be two grazing farms. One may be ... by a judicial tenant?—Yes.

284. And the other may be held by a man who ... a judicial tenant and who purchased. I ask you ...d you apply that power of compulsion equally ...te two, or would you exclude the purchasing tenant ... its operation?—I say there may be others, non...dential farms, that are used for grazing purposes, ... let as such, and that such farms ought not to ...d in the way of sale.

285. That is not answering my question. I take ...two farms, A and B. A has a judicial tenant, ...resident, B has a purchasing owner, who is ...lly non-resident. Now I want to get your ...ion on these two farms, exactly equal, one ...cial and the other purchased. Would you apply ...pulsion to the purchasing tenant if necessary for State purposes?—If necessary, of course, for the benefit of the country.

50286. Mr. O'Kelly.—You are willing to apply compulsion to the landlord?—To the landlord?

50287. Yes?—Most undoubtedly.

50287A. Now, the landlord holds in fee, does not he?—Yes.

50288. Would you have any objection to the application of compulsion in the case of the non-resident owner of a grazing farm who had purchased it under the Land Act?—I would apply the self-same thing.

50289. Do you not think that there is far greater justification for applying the power of compulsion to the man who acquired the non-residential land by State assistance than to the man who did not buy with State assistance?—I think it should apply in general to both.

50290. Sir John Colomb.—And, in point of fact, whoever the land was held by, or however it was held, if it was necessary you would take it from him?—Most undoubtedly.

50291. And in the case of that gentleman who told us he was a shopkeeper and had a grazing farm, you would take it from him?—Most undoubtedly, to relieve congestion.

50292. Mr. O'Kelly.—Of course you will agree that that view of yours is shared by the highest authorities on the question in the country, including Mr. Doran, who shares your view on that question?—Most certainly.

50293. Sir Francis Mowatt.—You further say that the funds of the Agricultural Board ought to be handed over to the Congested Districts Board, and that both Boards should be amalgamated?—I say so because there is waste with some of those high-paid officials, and one body would be sufficient, to my mind, to discharge the duties, and I believe the Congested Districts Board would be the proper body.

50294. You say the Congested Districts Board ought to be invested with power to take up all cut-away bogs and commonages for the purposes of forestry, which would enrich the country and improve the climate in the course of time?—Yes, and my reason for that is that I know some estates that have been purchased, and you will find them just as contrary as a landlord, and as obstinate with regard to taking over those cut-away bogs, and I say that it ought to apply to both parties for the betterment and improvement of the country.

50295. You say also that any tenant having, say, forty or fifty acres of land as a whole should not be allowed to hold other small patches away from his farm, mixed up with the holdings of other small tenants of four or five acres?—Yes.

50296. And that he should get the court value of these small plots, and these latter should be given to the adjoining tenants. What do you call the court value?—It is the fair value. There is such a thing in the Land Act of 1881, but the landlord had a prior claim on the sale of a holding, and that he could ask for the court value, and then I say the same thing should apply to such tenants as this—large tenants with holdings in amongst the small tenants with little holdings of four or five acres. You will find that he has one of those holdings of one or two acres in between two such small holdings of four or five acres, while he holds forty or fifty acres on the same estate. I say that that should not be allowed, and that he should get the court value and hand the small plots to the small farmers.

50297. Most Rev. Dr. O'Donnell.—Could you name a district where the Commission might see instances of what you describe?—I could.

50298. What is the district?—The district of Ballinrobe, and the townland of Brownstown, on the estate of George L. Browne. I could give you several other instances; but that will do for the present, I suppose.

50299. Sir Francis Mowatt.—Now, in the purchase of grazing lands you suggest that it is not the present letting price that should be taken as a basis of purchase, but the rent paid for them when they were

Aug. 30, 1907.

Mr. Thomas Heraghty.

held by Englishmen or Scotchmen for agricultural purposes. That is to say that if the rents paid were less than the profits now obtained from the grazing on the eleven months' system, you think that the purchase value of those holdings should be calculated on that rent, and not on the profits?—What I mean to convey to you is this, that within the last twenty years, I believe, and previous to that, these lands in my district—a good many of them—had been in the hands of those Scotchmen and Englishmen. They came over when the people were cleared off and driven off by the landlords of their day. And then, when the agricultural prices went down these industrious Englishmen and Scotchmen had to leave the country, and these lands that they held in those days are now let as auction fields for grazing farms, and on many of these there are poor people congested. Some of those people have to join—two or three of them—to take a field, and there are the big graziers who take the majority of the fields. I say it is not the letting price of those auction fields that the landlord should get, but the price that was given by the Englishmen and Scotchmen for agricultural purposes.

50300. In other words, that the equivalent of the landlord's receipts should not be calculated on what he is actually receiving now, but on the rent he used to receive forty or fifty years ago?—No; twenty or twenty-five years ago. I would go back no further. I go no farther back than the Land Act of 1881, in fact.

50301. Then that the purchase price ought to be calculated on the estate as it was twenty-five years ago, and not as it is to-day?—Yes.

50302. Most Rev. Dr. O'Donnell.—When those Englishmen and Scotchmen were brought over to farm Irish land did they always succeed?—Indeed they did not; they failed, everyone of them. I believe they all failed, and I believe there is not one in our district presently that holds on.

50303. And they left, sometimes without paying arrears to the landlord?—That I cannot say. I can say that they left Ireland far poorer men than when they entered it at all events, but I do not know about the payment of their obligations. I cannot say that.

50304. What you put to the Commission is this, that in calculating the amount that is to be given for those grazing farms, not only the sum now received annually under the eleven months' letting should be taken into account, but the sum that used to be received under that system?—Exactly, for agricultural purposes, when it was let as such; for it will have to be used for agricultural purposes by those tenants who will purchase.

50305. The system of bringing over Englishmen and Scotchmen did not prove to be a permanent one?—It did not.

50306. Do you think that the present system will be a permanent one?—The present system is very risky from the way we see things going from time to time, and as to going for auction prices, I say that the State would be embarking in a very dangerous ship, and the tenants would be much worse. That is what I believe.

50307. Sir John Colomb.—But those Englishmen and Scotchmen who took up farms worked them on the English and Scotch system?—They did.

50308. And therefore they improved the land?—I do not think they improved it. I think, on the contrary, that they left the land in a most miserable state, because they worked it in such a way with artificial manures and things like that that they impoverished the land.

50309. On the English and Scotch system?—Yes.

50309A. And therefore England and Scotland ought to be going to the bad, because if that system is pursued it is detrimental to the land?—I know it has affected it in a miserable manner, and they left broken down and with very little means when they did leave.

50310. You would not go back before 1881—is not that so?—Yes.

50311. And you want the land to be bought on the basis of the letting price of 1881. Is not that so?—What I do mean is this, that at what it let in those years I believe the tenants would be quite safe, or at least that the public bodies or boards would be quite safe, in purchasing, but not on the grazing letting price of the present day.

50312. That is a new proposition of yours, a... am anxious not to misunderstand it?—I wish I c... make myself clearer.

50313. What I understand you to mean is ... that the price at which land to-day is to be boug... the letting price that was before the Act of 188... Up to 1881.

50314. Very well. Is it not the fact that the e... of the Land Act of 1881 has been to cut down ... letting value?—Yes, to small tenants who were dr... into the bogs and marshes and mountains, and ... on those rich lands.

50315. If it be true that the Land Act operate... generally cut down the letting value, it appear... me that you are advocating giving more than ... price, in taking the rent before it was cut dow... No; the Land Act of 1881 has reduced the r... rents that have been on miserable tenants that h... improved reclaimed bog. That is what I mean... convey.

50316. Then is your proposition that that sh... be done only in cases where the holdings are out ... the operations of the Land Act?—Exactly. Tha... what I meant to convey to you.

50317. Now, supposing you hold a farm form... held by an Englishman or Scotchman, and you ... making a certain amount of money out of that l... now, and the State comes in and says: "I want t... land, and here is the price, which is less than ... are making," and walks you out of that land ... leaves you with less money than you had before, ... you think that would be quite just?—I think it wo... be quite just, because the land has been taken a... wrongly from the people, and the State, which wa... party to that wrong, should try to redress it. ... the State also, I believe, should have to consider t... the improvement of a nation is at stake and ... credit of such a nation as England.

50318. But there may be judicial tenants there ... Yes, there are plenty of them.

50319. And it is the case that your principle mi... apply to land judicially held?—In some cases.

50320. Well, take those cases?—I am point... out the cases to you.

50321. Take one of those cases in which there i... judicial holding. Am I to understand you to ... that you think it would be just for the State ... come in and carry out a policy and say to the ju... cial tenant: "You walk out of this, and we w... leave you worse off than before"?—I say that wo... be quite just when those lands have been taken o... by one of those gentlemen after the clearances of ... tenants when some portion of the tenants were dri... away to the cut-away bog on the outskirts of t... place; and then when the Land Act of 1881 w... passed, this gentleman who took the evicted la... took the opportunity and got the advantage of ... just as any other tenant would, then I say that t... tenants that have been evicted from that land, a... that are still down on the cut-away bog, should ... relieved and their grievances redressed, and t... wrongs that were done to them by the State or t... landlord in his day. That is what I say.

50322. Take the case of the last gentleman—a sho... keeper—who has bought a piece of grass land, pe... haps then judicial. He had nothing to do with pa... things, and it was in the market, and he bought ... and the point I put to you is this:—Do you thi... it would be just for the State to say, "In order ... carry out this policy you must clear out. You h... nothing to do with the clearances, but you mu... suffer for it"?—I say if the State want to redee... their character, and to stand as a nation ought t... they ought to remove that shopkeeper or any ma... be he who he might.

50323. And in the case of a local shopkeeper wh... has made money by his trading, and has bought ... judicial farm, do you think it would be right for t... State now——?—I do.

50324. You have not allowed me to finish?—I qui... understand what you are at.

50325. I take the case of a boy without a shillin... going to work, making his way up, and the ... becoming a shopkeeper and making money. The... is a farm put up for sale, a judicial farm, a gra... farm. With his capital he goes and buys that jud... cial tenancy, and do you mean to say it would b... just for the State to come now in and say to tha... man: "We are carrying out a policy; walk out ...

?"?—I say if that man lived outside a village e all the people lived in misery, begging, that n should be evicted out of that place and com- ated. That is what I say.

526. Supposing I agree with that, should the lose, or should the man lose—that is what I to get at?—That man went in with his two open, and knowing that this state of things ed in the country, and I say that he ought to more or less. I certainly say that.

527. Most Rev. Dr. O'Donnell.—What Sir John y wanted from you is this. You are putting out of that land. Would you pay him for his est?—I would most undoubtedly give him his est.

528. Sir John Colomb.—When you have taken and from him do you mean that he should have ame income that he had before?—I don't quite rstand you now. What income had he if he it for grazing purposes? And then how can the ascertain his profits and interest, for he can up that account as he thinks fit himself.

529. Suppose he is able to prove it, suppose you him a sum of money which, invested at 3½ per would bring him in as much, do you think tate ought to pay less to him?—I say I would him the purchase-price at the time he purchased lace and no more. That is what I would give

530. Mr. O'Kelly.—Has it ever been suggested a man should be turned out without getting ensation?—I would give him the purchase price e land that he purchased and no more.

531. Have you ever heard it suggested that he d be turned out, and turned out on terms which l involve the loss of his income—have you ever any responsible man in the country make a stion of the kind?—No; not likely; but I say man goes in and purchases, as they did in these few years, purchasing a farm simply because saw they were to make a profit in the near e, I say such men should not be compensated he profits they were receiving from the letting e land at the present day. They should get the ase price of the land and remove from it.

532. Sir John spoke to you about the acquisition n-residential holdings by shopkeepers, etc. You ware that it is the policy of both parties in Par- nt to relieve congestion?—Yes, I am aware of

533. You are aware that the Ministry of which John was a distinguished member was the first ass an Act of Parliament with that object in You are aware of that?—Yes.

534. And suppose that it was found that without cquisition of non-residential grazing farms the y of both parties in Parliament could not be zed, do you not think it would be only fair, when parties have bound themselves to that policy, cquire non-residential grazing farms owned by keepers and others at a fair price?—I have dy explained that they should get the purchase when they went in, but no profit for the money ted. To allow them to make a profit I say d be wrong. That is my contention.

535. You are aware that if the Congested Dis- Board or the Estates Commissioners were to- ow to acquire all the agricultural land held in ounty on the eleven and twelve months' system, land would not be sufficient to mitigate the con- n that prevails in the country?—I believe in nrobe Union alone it would not, if it is fairly ibuted according to the present size of holdings.

536. You are aware of that fact?—Yes.

537. You have it in our returns?—Yes.

538. Now, observe, that being the policy of both es in Parliament, to put an end to this great the non-residential lands, no matter by whom d, must be acquired?—Certainly.

539. Mr. Kavanagh.—You say that the funds of Agricultural Department ought to be handed over e Congested Districts Board, so that both Boards l be amalgamated. Well, the agricultural work present done by the Agricultural Department? s.

540. How do you suggest to amalgamate them? suggest that the funds of both bodies should be gamated.

541. The Congested Districts Board have no s at present?—The Congested Districts Board?

50342. They have no funds at present for agricultural improvement, I understand. All the work is done by the Agricultural Department, but you say you suggest amalgamation. I do not understand what you mean by that?—I mean that both bodies should be amalgamated, and half the officials that are now there dispensed with and done away with. That would be an enormous saving to the country, and go to improve the state of the country.

50343. You are under the impression that both are doing the same work?—I know the work, and I want that they should do the same work. That is my contention, that they should be amalgamated, so that they should carry out the useful purposes in the country that they were, I believe, formed to do.

50344. You are aware that the work was handed over from the Congested Districts Board to the Agriculture Department a few years ago?—No; I was not aware of that.

50345. Then you cannot remember that the work was done by the Congested Districts Board. You cannot compare the two. The agricultural work was at one time done by the Congested Districts Board?—Yes.

50346. And it was then handed over to the Agriculture Department. Then I think you were suggesting that the Congested Districts Board did the work rather better?—Far better, and the work of the Congested Districts Board was far more beneficial to the country. The work of the Agricultural Board, in the way that the money is expended sometimes, is a waste of public money in a great many cases.

50347. When you suggested amalgamation you really intended to suggest that the work should be transferred back again?—To the Congested Districts Board.

50348. Because you suggest that the agricultural schemes would be different?—Altogether.

50349. If the Congested Districts Board had the work, would the agricultural schemes be different from what they are with the other Board?—In fact I am a member of the Agricultural Committee myself, and no matter what suggestion you make, rarely, if ever, will the "Department" fall in with it; in fact the Committee is not let do anything. And then they suggest something themselves that is of no use for the country altogether, and that is the reason why I think that the funds that are expended by this Board should be certainly handed over to the Congested Districts Board.

50350. Sir Francis Mowatt.—The next note you have is that any leases or assignments made by any landlord to create tenancies since the Land Purchase Act of 1903 should not be recognised, and should be set aside as illegal and abortive?—Yes.

50351. You practically argue that out on a case brought forward, and we can take that as it stands, and perhaps there may be such other cases pending still?—Some underling in an office, hearing about the Land Act, perhaps, could get a bogus lease drawn up, and perhaps when the Board comes to buy and divide the land this party lodges his claim with a lease drawn up since the Act of 1903, and I certainly say that this lease should not be recognised.

50352. And you wind up by pointing out that it would be a boon to the poor people if the Union were scheduled as congested?—Yes.

50353. Mr. O'Kelly.—As briefly as possible tell us about that estate to which you refer, the estate of Lord Clanmorris. I should like the Commission to understand what you refer to?—In that case the agent and his office man made persistent attempts to induce the tenants to buy direct, and it went on for a certain time, but at all events the tenants were better advised, and they held aloof from the direct sale. They agreed to purchase through the Estates Commissioners, and it transpired after the sale was completed that a certain Mr. Good, the chief clerk in the office, had drawn an assignment by one of the tenants, who was a bailiff on the estate at the same time, and under this assignment he claimed so many hundred acres of land on the estate which was the demesne at one time of the Clanmorris family.

50354. Might I suggest this to you, that Mr. Good, a clerk in the Estate Office, went to a bailiff and said to him: "Will you sell me an acre of your holding?" Mr. Good being aware that the estate was to be sold. The bailiff sold it to Mr. Good?—Yes.

Aug. 30, 1907.

Mr. Thomas Heraghty.

50355. Mr. Good, living forty or fifty miles from the estate, then came in as a tenant and purchased a large portion of the property under the Act of 1903, and the question came before the Court, did it not?—Yes, afterwards.

50356. And I understand that Judge Morphy had to declare Mr. Good a tenant although he doubted the *bona fides* of the transaction?—No; he declared that the whole proceeding was illegal and a fraud. That is what he declared it to be.

50357. And Mr. Good, as an agent, living away in Westport, wanted to get hold of the land which was sorely needed for the relief of congestion in that district?—That is quite right.

50358. Sir FRANCIS MOWATT.—You mean that it was not right?—It was not right; it was quite wrong.

50359. Most Rev. Dr. O'DONNELL.—Only one question. Taking the grass land held under the eleven months' system and the grass land held in all other ways, in the Ballinrobe Union, if it were acquired at a reasonable price would it go far to relieve the congestion in the Union of Ballinrobe?—Taken all round, and to give every tenant what they call an economic holding, such as those already purchased. I say that still there would be some of the tenants short, even with all the grazing land.

50360. I gather now clearly your opinion, and that is all I have to ask?—There is no doubt that in Ballinrobe the misery and poverty would be very much relieved.

Very Rev. Canon STEPHENS examined.

Very Rev. Canon Stephens.

50361. Sir FRANCIS MOWATT.—You are parish priest of Ballinrobe?—Yes. I most respectfully submit to this Commission that the parish of Ballinrobe ought to be scheduled as congested. In the parish there are more than 4,000 acres of grass lands fattening bullocks up to the very walls of the town. Face to face with this state of things we have hundreds of families huddled together on worthless wastes and sour outskirts in poverty and squalor. I take for my argument the Kilmaine section of the Bingham Estate, recently purchased by the Congested Districts Board. On this estate there are 2,374a. 2r. 5p. in the hands of three farmers. Round about, on the rocks, in the bogs, through the scrub, there are over sixty families on holdings broken up into 707 separated patches. In the village of Cregduff there are twenty families perched upon a few acres of black rock, their holdings scattered around in 353 separate patches. In Cloonerneen eighteen families are planted in the bog reclaimed by themselves and their fathers, counting 127 separated patches. In Rosslaura, once a peninsula, in the bog, there are eleven families. A large sheet might cover their dwelling-places, and they pay rent for 169 separated patches, chiefly of bog reclaimed by themselves. In Knocknadruime, formerly covered with scrub eleven families eke out an existence on fifty-eight separated patches reclaimed by themselves or their forefathers. Then there are a few cottiers, a few herdsmen, and a few labourers, without a single labourer's cottage in all the poor law union yet. On this estate there is not even one economic holding, nor a sufficiency of land to make the existing holdings economic. The occupiers of the outskirts are the evicted tenants of the heart of the estate or the heirs of those who witnessed the horrors of the clearance, and they live in hope and bless the providence of God in the reversal of the "plantation scheme" of the Famine Days. I hope I have established a case to satisfy the Commission that the ambit of this estate should be regarded as congested, and that Clause 75 should be expunged from the Land Act of 1903. Plant the heart of this estate with strangers, and you make permanent the surrounding gloom and destitution which you will subsequently be unable to relieve.

50362. To whom are you alluding as strangers?—Those that would be migrated into the heart of the estate. I call those folk strangers who come from different localities.

50363. Most Rev. Dr. O'DONNELL.—I take it that the district is not scheduled?—The district is not scheduled.

50364. Just outside the grass land there is this big population living on intermixed plots?—Precisely.

50365. Those are the descendants of the people who were evicted from that land?—Yes; and some of the evicted themselves.

50366. They have the first claim to the enlargements?—That is what I hope the Commission will say.

50367. You alluded to labourers' cottages. Do you not think that if those men were put back on moderately-sized holdings, and here and there one remained who would not perhaps have an economic holding, the small farmers in the district would largely supply the place of labourers?—Oh, I dare say. In fact they are all labourers on that estate. There is not a single economic holding on the whole of the outskirts of this estate, and those very people themselves, the evicted of that estate of 2,374 acres, were obliged at the time, out of dire distress and want, to slave and consolidate their own holdings for the Scotchmen.

50368. And the reason you suggest for expunging Clause 75 of the Land Act of 1903 is that the district is not scheduled simply because the grass lands are the means of increasing the valuation?—Precisely, and I say the Land Act of 1903 was simply meant for the redistribution of the land as a whole.

50369. Do you say this, that the existence of these vast tracts of grass is the very reason it is not scheduled?—That is the only reason, and the people could not be worse than they are. As I was saying, if you plant the heart of this estate with strangers you make permanent the destitution which you will subsequently be unable to relieve. Precisely; you will have them in such a condition then, that it will be one of absolute distress. The bare thought and threat—because there has been a threat used—the bare thought and threat have aroused sullen, angry passions more difficult to control than to lay the ghosts of murdered men. I would not be responsible if there was a different arrangement made on the estate. The same argument holds good for scheduling the rest of the parish, only with more crying urgency. On other estates the details of human life are still more harrowing—wretchedness can no further go. But as mine has never been the wish to antagonize, I shall conclude this part of my evidence with a prayer that, not only this parish, but the whole province be scheduled as congested; that compulsory powers for acquiring lands at fair prices be conferred on the Congested Districts Board; and that sufficient funds be placed at their disposal to relieve congestion and distress, from whatsoever cause arising.

50370. Mr. BRYCE.—Father Stephens, to whom does this estate that you are alluding to, on which these grass lands exist, belong?—It belongs now to the Congested Districts Board. It did belong to the Earl of Lucan, and it was sold last year to the Congested Districts Board.

50371. In the immediate neighbourhood of the town of Ballinrobe?—Within a mile or a mile and a half of the town, I think. It is the Kilmaine section of the Bingham Estate, sold last year to the Congested Districts Board—at what price I do not know.

50372. Mr. O'KELLY.—At what price you do not know?—I do not know anything about the price they paid for it.

50373. Were any of the local people consulted?—Not that I am aware. There was a question asked in the end, of the tenants, what they would give for their holdings if the Board were to buy, and I was present at the meeting, at which the question was discussed very fully, and I did not in the smallest way influence the tenants as to what price they would offer. On the contrary, I would have declined and refused to do so. And they put their heads together, and they said they would offer 13 years' purchase for their holdings provided they got what was described by the Chief Secretary in Parliament as economic holdings, within the centre of the estate. The second part of my evidence is this:—A very prevalent cause of distress is the flooding of the land occupied by the poor. The River Robe is accountable for a large share of this distress. It floods thousands of acres of the best land in Mayo, from Lough Mask to its source in the parish of Bekan. Let me quote from an official Report made to the

inage Commissioners in 1847: "The total quan- of flooded and injured lands in the district is 86 statute acres. The annual increase in the value of the lands I estimate at £4,632, being an average 6s. 3d. per statute acre. . . . The mated annual increase in the value of the lands yield a profit of about 8½ per cent. on the out- independent of the value of the mill power ch will be brought into operation." This is extract from a report made to the Drainage Com- sioners in 1847. I have the Drainage report e, the full report, and it is a most important one, ring on this question. It was by a very eminent ineer, Mr. Harding. He speaks of the mill power t would be brought into operation. Unfortu- ely it was the very reverse. The mills, indeed, e never brought into operation. An industry killed, and the floods remain to attest the fact.

0374. Sir JOHN COLOMB.—You mean by the in- try that was killed the milling industry?—Most ainly. I know of my own knowledge that the ls were removed, and they have never since been ught into operation. And along the River Robe, a parish I was connected with some years ago, the of mills can still be pointed out. And the floods there all the time; and I say they are accountable only for the poverty of the people, but also for ill-health of a great many of the inhabitants. I e traced it myself, and I believe that deaths have ulted from these floods as well. Costly quays e built at Ballinrobe—the Lusitania might hor there—and locks and weirs and expensive dges span the Robe between the lake and town. few thousand pounds would complete the work. outlay is small, the gain a hundredfold. Thou- ds and thousands of pounds have been expended st lucratively and most laudably by the Congested tricts Board on the mountains of Partry. It is leasure to see the mountain teeming with life and tility, neat new cottages studded upon its big ad side. But the people are left without a rket, and if the Board to-morrow withdraw its con- ving hand all will be poverty again. Let this work completed, and the Robe made navigable from gh Mask to Ballinrobe, and those poor people will within easy reach of market. The town will rish anew, and thus an incalculable advantage uld be secured to town and country. Tourists that e travelled the world over declare that in Europe re is no more exquisite scenery than on the shores Lough Mask, and that they have never spent re pleasant days than on its bright and placid ters. Lovers of the rod and line find nowhere else enjoyable a holiday. If only that short reach of Robe were made navigable their happiness would supreme. Ballinrobe had once its tannery, its wery, tobacco spinning, flour mills and tuck mills, en every cottage had its home industry. All that is ne. On market days then one could with difficulty ulder his way through town; now a motor car ght race the market through. The remedy is not to seek. Most of the cost has been incurred; rest is but a trifle. In no other land on earth uld such a state of things be allowed to continue twenty-four hours. Let this Commission but ke a strong recommendation to those who wield destinies of the poor and the disgrace will be moved, and in its removal more permanent good will done for the relief of poverty and congestion than uld be effected by the fads and follies of fooling perimentalists. Some time ago, in conjunction th others, I brought this matter under the notice the Agricultural Department. They sent down spectors and engineers to inquire into cost and asibility. Those gentlemen sent in long and mpathetic reports, I have good reason to believe. hy fool the public for two years and tell us in the d it was no question for the Department? For at was the answer we got.

50375. Was any evidence tendered before the Drain- e Commission on this project?—I am not aware at there was. At the time I got that answer from e Department I went across myself to the Board of orks, and I was told there by a gentleman who was full sympathy with the project that it could be ne in one or other of two ways only. One was to rm a Drainage Board and apply for a loan, and ey would get it; but then as the chief landed pro- ietors were opposed to such a project there was no ance whatever of having such a Drainage Board rmed. The other was to get a free grant from the Treasury, but considering all the groaning there was about the depleted state of the funds there was no chance there either.

50376. Sir FRANCIS MOWATT.—On what ground did the local Mayo landlords object?—That is more than I can explain, except that one of them thought it might interfere with the privacy, or supposed privacy, of his place, though I do not think it would; and it would be a great improvement to any place. It would be splendid to see a steamer plying down the Lough, and those poor people in Partry brought into touch with Ballinrobe.

50377. Sir JOHN COLOMB.—In regard to the failure of the former scheme, how was that?—The question refers to another matter altogether. I really know nothing about it, but I heard that it was supposed that it could not be worked out, as the fissures in the limestone swallowed up the water between Lough Mask and Lough Corrib, but that could be remedied now with the utmost possible ease, because a few hundred tons or thousand tons of cement would make that all secure. And a question ought to be asked in Parliament as to whether or not the Grand Jury of Mayo were right in selling away the river and water right to Lord Ardilaun. Lough Mask could become one of the chief fisheries in Ireland, if the salmon were allowed up from Lough Corrib. But that has nothing whatever to say to the question of the Robe, which flows into Lough Mask from Bekan, Claremorris, and Crossboyne.

50378. The Robe is a separate question?—The Robe is a separate question altogether. This is no part of my evidence. I hope, at the same time, the Commission will take it from me. The people are peaceable and patient, and hopeful now, but there is an indefinable something in the air, like the stillness which precedes the storm. If they are disappointed I shall not answer for them. It is the duty of the Government to promote the public good, and give effect to the wise and beneficent findings of this Commission.

50379. Mr. BRYCE.—You know nothing about this drainage question locally?—I am quite sure I do not, but I believe it would serve every interest in every way, and I believe it would afford a most comfortable and pleasant holiday to the highest and best in the land, and that it would be no eye-sore in the smallest way, and no invasion of the interests or privacy of any place.

50380. Mr. O'KELLY.—Why is it that you would like to see section 75 of the Act of 1903 repealed?—Because it provides only for the advantage of those whose rateable valuation does not exceed £5. There are a great many over £5 who need relief quite as much as those under £5, and on that ground it ought to be expunged from the Act, as it but mocks at the widespread distress of those of a higher valuation.

50381. Do you not think it would be better in the first instance to look after those whose valuation is under £5—to look after those whose valuation is small in the first instance, rather than those whose valuation is large?—I agree quite; but I say the question of valuation is, after all, a relative question; and it is very hard to draw the line; but I say it is drawn at the wrong place.

50382. Do you say valuation is no test?—No test whatever, and you might have an economic holding at a valuation of £5.

50383. You would like to have the whole thing expunged altogether?—That section certainly so far as it interferes with the rights of others whose valuation is over £5.

50384. Although that section says the Congested Districts Board "may" deal with certain tenants?—Yes; still I think it is an eye-sore to the Bill.

50385. Mr. BRYCE.—You wish that it should be enlarged above £5?—Yes, that would do.

50386. Sir JOHN COLOMB.—With reference to Mr. Conor O'Kelly's question, is it your view, that in attacking the great evil of congestion, with the relatively small quantity of land available for its relief, the primary question is the enlargement of uneconomic holdings, and that that should have priority altogether to any claims of the sons of the tenants?—I would say so. The existing holdings first.

50387. And it is not until that relief has been afforded to the uneconomic holdings that the question of the sons of the tenants would arise?—There are some who have sons in those holdings, and of course you would come to their relief in that way, and there are others whose sons might be disposed to migrate

Aug. 30, 1907.

Very Rev. Canon Stephens.

to economic holdings, and in the next place I would provide for them; but I would certainly provide for the poor first.

50388. Mr. O'Kelly.—Would you not provide, in the first instance, for the holders on the property purchased?—Certainly. That is my contention.

50389. The section says: "Where the Congested Districts Board purchase land for the benefit of a congested districts county, they may sell under the Land Purchase Acts any parcels thereof which are not required for tenants of holdings in that county." Do you see?—Yes.

50390. Which are not required for the tenants of holdings in the congested county in which the property is situated?—Yes.

50391. And, observe, they "may" then (after having looked after the interests of tenants of holdings in that county) sell "to any tenants or proprietors of holdings not exceeding £5 in rateable value on an estate adjacent to or in the neighbourhood of that land, or to any sons of such tenants." Do you not think that that is not an unreasonable clause?—I think it is a most unreasonable clause, certainly, because in the case which I have suggested on the Kilmaine section of the Bingham Estate it would be most unreasonable to import into it others who are outside, who are poor, I grant you, but whilst there are poor men on the estate in the condition which I have described to you, I think it would be an outrageous thing to bring in others into a place like that.

50392. What the section says is that they may sell "any parcels thereof which are not required for the tenants of holdings in that county"?—You cannot in the case I am dealing with plant people from outside in the heart of that estate without injustice to the existing holders on that estate.

50393. Suppose we increase the valuation from £5 to £10, do you think that would be reasonable?—I am sure that would be going in the right direction, and I agree with you.

50394. Mr. Bryce.—Those fringes you speak of are in a congested county?—No; they are not in a congested county at all. My prayer is that the ambit of that estate and the parish and the county generally should be scheduled as congested. It is not scheduled as congested, but it is congested to the last degree.

Rev. John Fallon examined.

Rev. John Fallon.

50395. Sir Francis Mowatt.—You are Parish Priest of Knock?—Yes.

50396. You are nominated to appear, as I understand, by the Archbishop of Tuam and the United Irish League?—I have been nominated to give evidence here to-day by the Archbishop of Tuam, and I have been asked too by the United Irish League.

50397. Most Rev. Dr. O'Donnell.—Nominated by both?—By both. The law regarding the areas scheduled as congested requires to be amended somewhat. As the law exists at present, quite a large number of townlands, or villages, though in reality quite congested, are still not scheduled as congested, and therefore cannot come under the operations of the Congested Districts Board. For instance, the village of Cloonlavish, in the Parish of Knock, is perhaps one of the most congested villages in the whole parish. There are about twenty houses in it almost touching each other—only a few yards apart—with holdings averaging £3 or £4 in valuation, and still this village is not scheduled as congested, and for the past ten years has been excluded from participating in all the advantages of the Parish Improvement Scheme. This is not by any means an exceptional case. There are quite a number of townlands so circumstanced; and I am of opinion therefore that the present law should be so amended as to take in those cases. I think the difficulty would be met, if the Congested Districts Board were to be empowered to put upon their schedule exceptional townlands of this kind, where, after inspection, they are fully satisfied that congestion really exists.

50398. Do you mean that wherever congestion exists, after official inspection, it should be scheduled?—After inspection, after Mr. Doran, say, examined the place; and I would leave it to their discretion.

50399. Sir John Colomb.—And also that it should be by townlands?—Well, I would say that, if by an examination of the townland they found it was congested, they should put it on their schedule. That is my idea.

50400. Most Rev. Dr. O'Donnell.—Perhaps you are aware that, as Mr. Sutherland states, that is the rule in Scotland?—I am glad to hear it. With reference to representation on the Congested Districts Board, although I am decidedly of opinion that a large representation on any board considerably interferes with its efficiency, and the principle, "What is everybody's business is nobody's business," has a special application in this case, still I think that, as there is a very large congested area in the County of Galway and along the western seaboard, in the County of Mayo, without a local representation those districts ought to have a local representative on the Board.

50401. Sir Francis Mowatt.—Do you mean a local representative elected by them?—Well, my idea would be this, that the county councils should be empowered to select some person, either one of their own members or some person outside, to represent them on this Congested Districts Board. I would not say necessarily the chairman of a county council or any member of the county council, though I think the county council members are fairly intelligent representatives of the county, and they would be able to give an amount of valuable time and knowledge, and would be able with credit to represent their county on the Congested Districts Board.

50402. One man from each congested county?—That would be my idea, because I do not care for having too many members on a board.

50403. Sir John Colomb.—Not elected, but nominated by an elective body—the county council?—I would say that the county council in each county should elect or nominate, I don't care which you make it; the man selected need not belong to the county council at all, but any man, inside or outside who would, in their opinion, be a capable man.

50404. Have you got it in your mind that it would be a permanent nomination, or for a period of years?—I could not say what period of years, I have not followed my plan so far as that.

50405. Mr. O'Kelly.—You would have one for each congested county?—Yes.

50406. And would not that make the Board rather unwieldy?—I do not think it would.

50407. Would you not think it well that men who have to look after their colleagues on the Estates Commission might be removed and supplanted by those who would be nominated. For instance, do you think it right that a member of the Congested Districts Board should be a representative of the Estates Commission, or that the Vice-President of the Department of Agriculture should be a member of the Congested Districts Board; and do you think it is wise that an official of the Agricultural Department should be a member—but you are aware, of course, that one of the most useful men in the country is Mr. Green?—Of course; I am only throwing out this as my idea.

50408. Do you not think that a solution might be found in this way, that men who in the opinion of the County Councils would be worthy members of the Congested Districts Board might supplant those who have other functions to attend to?—I will not go so far as that about supplanting those on the Board. I would not care to go so far as that. I am merely giving my own suggestion. The third point I wish to come to is the question of amalgamation of the Congested Districts Board with the Estates Commissioners, or no amalgamation. I am decidedly of opinion that the Congested Districts Board should be allowed to deal with the purchase and distribution of land in the province of Connaught.

50409. Sir John Colomb.—But you would not limit it to the province of Connaught—you would include Donegal, Kerry, and West Cork?—I would include those, yes. I would not have the Estates Commissioners dealing with Connaught. The Congested Districts Board has been operating in the parish of Knock for the past nine years, in the way of purchasing and distributing and improving the land, and I can say it has given every satisfaction. The people have great confidence in the honesty, integrity, and ability of the Board's officials. The chief Land Inspector, Mr. Henry Doran, by his courtesy and

sympathy and firmness withal, has made the Board trusted and respected, and in my opinion it would be nothing short of a calamity if the Board, after its years of experience in dealing with the problem of congestion, should be broken up, or amalgamated with the Estates Commissioners. In the purchase of estates where there are little or no improvements to be made, it makes very little difference whether those are purchased through the Congested Districts Board or through the Estates Commissioners, but in the case of those estates where the holdings require to be improved and remodelled, and where a thousand complications arise in the way of turbary rights, and rights of way, and deeds of assignment, etc., a special staff of competent and experienced officials already acquainted with the work is most necessary. Where, therefore, estates of this kind have to be dealt with, the proper and only Board to deal with them is, in my opinion, the Congested Districts Board. The third point I wish to come to is how to elevate the condition of those living in congested areas, and how to relieve congestion. With regard to those persons who have already fairly economic holdings, but who manifest a certain apathy with regard to improving their social condition, consequent, no doubt, upon the baneful system of landlordism, where any improvement meant, in most cases, an increase of rent, I am of opinion that their social condition can be elevated and dealt with most successfully through the Parish Committee Scheme. I do not know of any other scheme which has such possibilities as this. I have been working in the parish of Knock for the past ten years, and the change that it has brought about over the whole face of the parish is simply marvellous. When we commenced to work the scheme, nine years ago, the cattle were in most of the dwelling-houses. We built about fifty out-offices the first year, which on an average were estimated at £12 each. We did the same in the following years, until every land-holder had sufficient accommodation in the way of out-offices. We then proceeded to improve the dwelling-houses by inserting concrete floors and large windows. Most of the dwelling-houses are now provided with suitable floors and windows, and last year we commenced a planting scheme on a small scale, and planted about 20,000 trees.

50410. Sir FRANCIS MOWATT.—The Parish Committee did that?—Yes.

50411. How did you work that—did you give the price or a contribution towards the expenses of the tenants in putting up a sort of shelter belts?—What the Board did was this. They said: "Will you get as many as you can to plant?" And they gave us a grant. They said: "We will contribute to you a third. Buy the young trees yourselves." I ordered the trees, and I bought them, and the Board said: 'Give us the bill of the amount, and we will pay you one-third, and let the district pay the two-thirds." And we did that, and the Board gave us the money—it was only £5 or £6—cheerfully, and we planted the trees.

50412. Tell me how they are growing?—They are growing beautifully. The Board gave trees before that which were planted, and they are growing nicely all round, and I think after a number of years they will be a decided improvement in the way of shelter belts all round.

50413. What are the trees, mainly, that they put in the shelter belts?—Austrian pine and Scotch fir.

50414. Sir JOHN COLOMB.—Was it a condition precedent to get the trees properly fenced?—Yes; we had to get a supervisor first to take note that they were properly fenced, and there were no trees given till there was a certificate from the supervisor to say that the fences were properly made.

50415. Quite right, and did you give the tenant the trees?—No; only that we allowed the tenant one-third of the first cost of the trees.

50416. And it came to this, that a man anxious to plant would go to the Parish Committee and say: 'I want to plant this spot?"—Yes.

50417. And you first saw that it was properly fenced?—Yes.

50418. And then you gave him help?—One-third of the price of the trees.

50419. And that operates in your parish successfully?—Most successfully; and I think next year we will have twice as many.

50420. Sir FRANCIS MOWATT.—You allowed him nothing for his labour?—Nothing for his labour.

50421. Mr. SUTHERLAND.—How long ago was the first planting?—The first planting was about three years ago by the Congested Districts Board, on their own initiative. They did the whole thing themselves that time, and the trees of the first planting are growing.

50422. Have many died?—A good many have died, and they are supplying their places again. They planted them quite near the surface, and they did not take root.

50423. Would you say a third of them have died?—I would not say a third of them have died. I am of opinion that this scheme of Parish Committees has wonderful possibilities, and I should very much desire to see it extended.

50424. Most Rev. Dr. O'DONNELL.—Allow me to say that it greatly helps a Parish Committee when it has one like you to aid it?—Thank you, my lord. I am convinced that it could be extended to agriculture also, and if a Parish Supervisor working under this Committee were to superintend the preparation of the ground, the class of seeds to be set, the proper time to set them, and the class of manures suitable to the different soils, a wonderful advance could be made in agriculture in a few years.

50425. Sir FRANCIS MOWATT.—You supply the Parish Supervisor?—Now.

50426. How is he paid?—He gets 10 per cent. out of the expenditure of the grant of the Board. If they are given £100 grant he gets 10 per cent. out of the amount expended.

50427. If you were to employ him as a sort of agricultural instructor a different form of payment and amount of payment would have to be adopted?—Yes.

50428. He would practically have to give up his whole time to it?—Well, I do not mean to imply that the same man would be employed, but I say that if you had a scheme of agriculture working with the same supervisor as our present one it would be a great success. That is all I want to say. I think you really bring agricultural instruction much nearer to the people in that way than by agricultural instructors and lecturers. That is my own idea. He carries out certain plans and specifications, and I think if agriculture were worked on that principle it would be a great success. I think you could make it a success by working it on that principle.

50429. Mr. KAVANAGH.—With regard to the improvement of houses by the Parish Committees, do you find that the people are afraid to improve their houses in case of a higher valuation?—I will deal with that further on. It is a great disadvantage, because the valuation put upon these poor people is quite unfair. I say it is quite unfair to these poor people, the poorest of the poor very often, to have a valuation put upon their improvements. I will mention it afterwards.

50430. Do you think that they are actually afraid to improve on account of that?—They are not deterred from doing it, but all the same it is a great obstacle in their way. As a matter of fact, one year in one village they built twenty slated houses in the village, and that is within the last year or two; and that shows that they are not terrified so much, but it presses very heavily on them. It would be impossible to over-estimate the importance of this parish scheme in the way of educating the people. They have to build upon the sites selected, they have to carry out the work according to plans and specifications submitted, and this in itself is a great training. Then, once they begin to improve, the taste for improving grows upon them until it becomes almost a passion. When a man buys a new suit of clothes he does not wish to appear in public with an old hat or an old pair of boots; and so, when one improvement is made in a premises, a thousand and one things are crying out for improvement too.

50431. Sir JOHN COLOMB.—I should like to ask you another question. Has it not also the effect of being, in a measure, I may say, technical training?—Quite so.

50432. When they in that way, and in their own houses, have the advantage of the advice and intelligence of the supervisor, it is really indirectly a technical education?—Quite so. That is what I

Aug. 30, 1907.

Rev. John Fallon.

meant when I said training. I quite agree with you.

50433. I should like to ask you one general question with respect to the constitution of the Board and the parish committees. Did it ever strike you that those who are engaged in parish committee work embrace men who, generally speaking, know the interests, difficulties, and general position of congestion?—Quite so.

50434. Did it ever strike you, or if you are prepared to give me an opinion I should be glad to have it, on the question of nominating members of the Congested Districts Board, that if the parish committees, either through their chairmen or in some other way, were called together to nominate members of the Congested Districts Board it would be almost a better machinery than the nomination by a county council, the members of which have to do with large areas uncongested, and who have no special knowledge of the congested parts?—No, I would not agree with you. The parish committees are only in certain parishes. I see in County Mayo they are not in all the parishes, and I would much prefer to have the nomination or election in the hands of the county council when the parish committees are only here and there. We only get a grant for a year, and one might not be in existence next year or the year after.

50435. When you say there are not many parish committees in the congested parishes do you mean relatively to the congested parishes or relative to the whole county?—There are many parish committees in the congested parishes, but I say there are congested places where they do not get a parish committee at all.

50436. Most Rev. Dr. O'Donnell.—In that last statement of yours about improvements by the people you said—"Then once they begin to improve the taste for improving grows upon them until it almost becomes a passion. When a man buys a new suit of clothes he does not wish to appear in public with an old hat or an old pair of boots; and so, when one improvement is made in a premises a thousand and one things are crying out for improvement too." That is an expression of your own sentiments?—Yes.

50437. Is it from your own experience and observation?—Yes, my lord.

It looks like a sentence that might be framed.

50439. Mr. O'Kelly.—It takes some time to master such work as the Congested Districts Board has to perform?—It does.

50440. And do you think that, that being so, the county council would be the best nominating authority. Let us say that upon the County Council of Mayo we had a representative of the Congested Districts Board, and that after his three years of office he had not succeeded in bringing certain advantages to his district, do you think he would be likely to be re-elected?—Well, I think if the members of the County Council were really as broad-minded men as they are supposed to be from all the different localities, I think they would be broad-minded enough to understand that if a man has fairly tried to discharge his work honestly and faithfully they should be glad to continue him again.

50441. Might not that be obviated by extending the period of office to six years?—I do not mind the term, but I am talking with regard to his election, which is the only point that I referred to.

50442. But you will say that there is some little difficulty in regard to what I was saying?—Quite so.

50443. Mr. Bryce.—Suppose a man was elected for three years, or whatever number of years was usual, if he was not adequate they would be able to find somebody else?—Oh, yes. In fact I would rather allow him to remain six years. Because he is only trying his hand for the first year or two, and he should get a chance of working out his own destiny in the matter; and six years might be better.

50444. In connection with those improvements made by the Parish Committee, have you had any domestic classes at all?—We have had.

50445. And do you also find that they were successful?—I think they were a most wonderful success. I will give you an example. The Board has been very kind to us—very kind, and they sent down to us an instructress in domestic economy, laundry, and cooking, and we got up a class there in a house—one of the best in the village, and we had an attendance of forty young girls averaging from sixteen to twenty or twenty-one, and they got this weekly instruction there, and it changed the whole aspect of the country in the way of cleanliness and tidiness and everything; and it has been a great success. We have applied to have another one of them. The girls scarcely lost a single day. There was hardly one absent in the entire six weeks.

50446. Sir Francis Mowatt.—Did you include cooking?—Cooking, laundry, and domestic economy.

50447. Domestic economy is rather an indefinite term?—It is; but there were cooking and laundry.

50448. And the tidiness of the home?—Yes. I look upon that as the best economy, tidying up the rooms and keeping the house tasty and clean. The next point is how to relieve congestion in the case of those who have not economic holdings. When we come to deal with the question of how can congestion be relieved in the case of those people who are living upon small uneconomic holdings, very often huddled together in a village, we are approaching the real problem. The solution in the mouths of all is more land and better land. But, when the problem comes to be worked out on practical lines, a great many difficulties have to be met, and a great many obstacles have got to be surmounted. The first difficulty is, what lands are to be acquired, and how. If there are any untenanted lands, or non-residential farms, in the neighbourhood of a congested townland, those lands should be acquired in the first place, and, if necessary, compulsory powers should be given to the Board to acquire them, and have them parcelled out in lots of eight or ten acres among the small land-holders, so as to make their holdings fairly economic. The operations of the Board in this direction would, in my opinion, be likely to be most successful. The experiment has been tried in the case of two farms in the parish of Knock, and the result has satisfied myself, and has, I believe, satisfied the parties concerned.

50449. Sir John Colomb.—That was carried out by the Congested Districts Board?—Yes. I am satisfied that most experiments carried out on these lines will be successful; because, when a tenant has already a house and offices and a small holding, the additional acres will be a great advantage, and although the rent on the new take will probably be considerably higher than what he was paying on his former holding, still he will be likely to meet his engagements, and he will find his condition considerably improved. While operating on those lines, the Congested Districts Board has the great advantage that it will not be called upon to spend much of its income on experiments of this kind, as no houses or out-offices have to be erected, and hence the expenditure will not be very considerable.

50450. Sir Francis Mowatt.—Do you think that the old house on a very small holding would suffice for the new enlarged holding?—If it is a tolerably decent house, that you have in a great many cases, I would keep the old house and add a new plot. And in connection with this, I have had the advantage of living among them, and I know from the people, and I have been going about among the people for the past month; I have been cycling all round, and I find the people would like very much to get five or six statute acres even two miles away from their houses. They would not think that too much, because at present they have to pay high for con-acre, and to send cattle grazing. I would not consider two statute miles too far away from a tenant's house.

50451. Sir John Colomb.—You mean the additional land for enlarging the holding need not necessarily be contiguous to it?—That is what I mean. If they can have it contiguous they will be very well satisfied to have it; but if they can have it within two miles of their holdings I think they will be quite well satisfied with that.

50452. Mr. Kavanagh.—Do you approve of common grazing in the vicinity of congested districts?—Well, I have thought of that, and I have heard it put. It might last for a number of years fairly well, but I do not think it would have what you might call the principle of permanency in it. It would be a good thing in a case where you cannot manage otherwise. It might possibly do for the time being, but as a practical settlement it has not, to my mind, a permanency, or permanent principle in it.

50453. Mr. Sutherland.—Is it not improving the absolute position of the man?—Yes; the only objection I have to it is that it would not be permanent.

0454. What is the element of absence of perma-cy in it?—Suppose you form a Committee to hold arm for a number of grazing people, how long will hold it for them?

0455. Ever and anon?—It would not satisfy my d.

0456. You want individual exclusive possession? do. I think that is the only thing the people e an interest in. There is no permanency in it. you could have a body capable of managing and ing it it might do. It is a difficult scheme to k out, from what I see.

0457. Mr. KAVANAGH.—What they call common ing is very prevalent abroad?—I do not know re it is.

1 Europe.

0459. Mr. SUTHERLAND.—And in Scotland. And the basis of land tenure in Scotland?—I did not of that.

0460. Most Rev. Dr. O'DONNELL.—You do not ct to it?—I do not object to it by any means re getting the land is not practicable.

0461. You think that getting the land is a better em?—Yes; but in case you cannot do it I think would be a move in the right direction.

0462. It would be a great improvement on their sent state if we had land held in common and aged by a committee?—It would.

0463. When you told Mr. Kavanagh and Mr. nerland that you did not think it had any element permanency in it, perhaps you had in your mind difficulty of making the committee permanent?—I had; that was what I intended to bring out. t was the great difficulty that I had.

0464. Mr. BRYCE.—But, if you could see your way ugh that difficulty, you would not object?—No, at all. On the contrary.

0465. It is easily managed?—If you get good agers.

0466. It is easily managed in every place?—Very ; I have no objection in the world to it. I rather it; but I could not see my way myself to work

0467. Mr. SUTHERLAND.—In any case it is the man-ent of their own affairs?—Quite so. We must face the problem of those townlands which have arms or unoccupied land adjoining them; town-s such as are to be met with in the Swinford on, where there may not be an available farm in a radius of ten miles, and here we are brought to face with the most tangled portion of the n. Migration would seem to be the sole remedy his case; but the carrying out of this experiment ires very great circumspection, and it is here that Congested Districts Board might be in danger of ing out beyond its depth. I have heard it stated one of the characteristics of the Irish peasant, cially the Western peasant, is that he is very ctant to leave his home surroundings and his hbours and friends, and that it is exceedingly ult to induce him to migrate to any considerable ance. This is true to a certain extent; but a t change is coming over the peasantry, I notice. are becoming more practical and less sentimental, ng, no doubt, to their intercourse with social life America, and to the number of emigrants who rn each year from that country; and I have no t that numbers would have very little reluctance migrating, if they could be persuaded that they bettering their condition. But, in most cases, great objection the small tenant farmer has to ate is, that he is afraid to face the responsibilities large holding with high rent, high rates, and a expenditure in the way of working this larger ing; and, in my opinion, the migration tenant ise to think seriously before undertaking those eased responsibilities.

0468. Sir FRANCIS MOWATT.—In the parishes with h you are acquainted is it the fact that many rants return each year from America?—Quite so.

0469. Do they settle down, or do they visit and way again?—In the parish I am in you would during some seasons about 100 emigrants return, of them girls, and a good percentage of these remain and marry and settle down. They left nd when they were about sixteen, and, after ining for five or six or seven years in America, return with £100, and many of them with £200, settle down, for they are sure to get husbands.

0470. Sir FRANCIS MOWATT.—You would define £100 or £200 as the price of a husband in Mayo?—Quite so.

50471. Do any of the men that come back settle down?—Very few of the men. And it is a strange thing that they do not send home so much money as the girls. The girls are always sure to send home money to their fathers and mothers. The men do not send much at all. That is my experience. A number of small landholders in the parish of Knock were offered larger holdings if they wished to migrate. Five of them migrated, but the others, when they inspected the new holdings, and considered the annuities they should pay, declined to do so, as they could not see there was any inducement to change. They were frightened away chiefly by the high rent they were expected to pay.

50472. Do you say what happened the others?—I went round to visit every one of them the week before the Commission opened. I called upon them, and had a chat for half an hour or an hour with some of them. In case a large landholder or farmer is prepared to give up his land and migrate, the Congested Districts Board should give every encouragement to him to do so, as he will be likely to succeed in his new holding, and his former lands will come in quite suitable for distribution among his former neighbours. But the experiment of purchasing a farm and parcelling it out into lots of fifteen or twenty acres, and building houses, making fences, and migrating a poor class of tenants into those holdings is a very dangerous experiment—dangerous to the community, and dangerous to the individuals concerned. It is the opinion of the prudent farmers in the country that a scheme of migration on those lines is bound to be disastrous for the following reasons.

50473. If you take a tenant and give him an enlargement up to fifteen or eighteen acres in this parish he will still have to build fences, paying a higher rent or dearer annuity, so that it is not peculiar to the migrating tenant, but it appears to apply to any tenant whose holding is materially improved?—Well, the man who migrates goes to a new holding altogether, and I will show you the difference between the two as I proceed. When the land is purchased, and fenced and built upon, the migrant has to pay an annuity, which in most cases is fifty per cent. over the annuity which his neighbours who had enjoyed their tenant-right have to pay, and in some cases he has to pay a hundred per cent. in excess of his neighbours. I am in a position to give an example of this kind, where a farm was purchased and striped out by the Estates Commissioners. A holding on this farm was given to a new tenant. He has to pay £1 5*s.* an acre for this holding, whereas the man on the other side of the road, his brother, who lived in the family home and who had a tenant right in the land, is only paying at the rate of eleven shillings or twelve shillings an acre for the same quality of land, and there is nothing but a fence separating the two holdings.

50474. Mr. SUTHERLAND.—Was there a house on that holding?—There was a house on the holding of the man who had to pay 12*s.* an acre, and the other man, the £1 5*s.* man, had to build a house besides, and it was not included in it, and he will have to pay big rates.

50475. Mr. O'KELLY.—Does that suggest that too high a price was given for the unoccupied land?—That is the conclusion I draw at the end of my evidence.

50476. Did he get a grant for the house?—I do not think so. I am only putting it as an example. The matter of the sale is the difficulty you have to contend with when you plant men on the soil as they are planted now.

50477. Sir FRANCIS MOWATT.—The difference appears to be not that he is paying too much, but that the next man to him is paying still less. It might be thought that when he migrated from his former to his new holding it would make a difference?—By the way, this man did not migrate at all. He has a brother living in the holding, and he got the portion of the holding on the other side of the road, so that he was a migrant properly speaking, but he was only planted. And I want to bring out how he is handicapped in the race for 68½ years. Besides, the migrant, as a rule, has to pay rates upon a high valuation, the valuation of the slated house amounting in itself to a few pounds. Now, I consider this the greatest grievance in the whole case; I mean the

Aug. 30, 1907.

Rev. John Fallon.

valuation. The Board has nothing at all to say to this.

50478. It is the Government valuation?—I may tell you how it works out. Where there is a farm valued at £20, and the Board takes possession of that farm, they must keep the same valuation still. They will divide the farm into four parts of £5 valuation, and the tenant coming in will pay this £5 valuation, and a house is built, and they slap on him £2 extra as the valuation of the house. That is where the great grievance comes in. I was thinking of how to deal with this problem, and I think the best suggestion would be that there should be an Act of Parliament passed that for ten or fifteen years those who were brought through charity to holdings of that kind should not be taxed at all.

50479. Not to be ratepayers?—Ratepayers for the land, but not for the house.

50480. You mean that the charge for valuation of the house should be deferred?—Should be altogether excluded for ten or fifteen years. I have visited their houses, and I found one poor woman paid £4 18*s.* in rates alone

50481. Is this a migrant?—Yes, a migrant. She has 16 Irish acres of land. Another, a man valued at £20, paid last year £4 6*s.* That is a very difficult thing for a man with sixteen acres to pay, and it works out very unjustly to this poor class of people.

50482. Most Rev. Dr. O'Donnell.—It comes exceptionally heavy on them?—It does.

50483. And they want all their resources for the working of the land?—Yes; and that is the principal point I would wish to impress on the Commission, the grievance of the valuation that these poor men and poor women have to pay. This consideration of having to pay higher rates must not be left out of sight, for in my opinion the rates are likely to increase. When the social conditions of a community are improving, more and better roads will be required, more and better water will be required, more and better lighting will be required, and public buildings will be multiplied, and all those things mean higher rates. Now, if the ordinary land-holder who has purchased out his holding will have enough to do to cope with foreign competition, what is to become of those who are paying 50 per cent. additional in rent and taxes, and how can they compete in the open market? In my opinion, therefore, any migrant planted on the land must be placed fairly on a level with his neighbours, otherwise the experiment will spell disaster. This is not the case at present, and therefore I say that the system of migration is faulty at root, and should not be extended unless those who are planted on the grass farms are given a fair chance of competing with their neighbours. But I think the grievance comes in principally with regard to the valuation. I think the Board have done everything in their power to make the holding as cheap as they possibly can. I do not know how they can manage it so well because they have used almost superhuman efforts to try to keep down the annuity as low as they possibly could. They have made it as small as possible for the poor men, but the high valuation is what I think will knock them out in the race.

50484. Sir Francis Mowatt.—It depends on the valuation?—It does.

50485. Sir John Colomb.—It appears to me that what you advocate is that, in the case of a migrant he should not be charged for some time on the assessment of his house?—Yes.

50486. Now, take a case that you mentioned here just now—that man at the other side of the road. Supposing that the man at the other side of the road builds a house, would you say that he should not pay, or would not he then have a grievance?—I do not say that I would take off the valuation, but I would defer it for a number of years to give the poor man a chance. This poor man, put in there, has a high rent, and I say, "Give him a chance—defer the valuation for fifteen years."

50487. Would you defer putting the tax on the individual on the other side of the road?—No; not by any means. I think it would be a most enormous grievance to exempt a man who is specially benefited by the State, but I would exempt the poor man opposite. He is assisted by the State simply because he was not able to live where he was, and the State acting as some philanthropic society, has put him there to give him a way of living; and if you put him there you should give him a chance of living.

50488. Sir Francis Mowatt.—We have now dealt with the migrant for whom you have asked this relief, and we have dealt with the migrant who builds his own house, and who is not asking for this relief. There is a third, the migrant whose land is enlarged, and on which enlarged land the Congested Districts Board builds a house. How would you treat him?—I am not going in for making an exception in his case, because I presume, that if his holding is enlarged he has got fairly good value, the old holding making up for it to a great extent, and I would not exempt his house from taxation.

50489. Mr. Bryce.—Before you go, I should like to ask you this question. You have said nothing at all about public opinion on the question of migration. Do you anticipate any difficulty about the public opinion of any particular neighbourhood objecting to the introduction of migrants from any other parish, or another district, or another part of Ireland?—If you supplied the wants of the people where they were distributing the land I think there would be no public opinion against it, their own wants being supplied. But I think if you bring in migrants from ten or fifteen miles away, and do not supply the wants of the people in the first instance, you will have trouble, and naturally.

Sir Francis Mowatt.—I am sure the Commission are under great obligations to you for the excellent evidence you have given.

Mr. Thomas Connell examined.

Mr. Thomas Connell.

50491. Sir Francis Mowatt.—Are you a farmer?—Yes; I reside at Bekan. My holding is thirty-five statute acres. My valuation is £11 5*s.* My old rent was £24, and my purchase annuity now is £5 17*s.* I was living under a middleman when I was paying the £24, and a tyrant at that. My holding is at Bekan, between Knock and Ballyhaunis, on the Dillon Estate. I was under a middleman, Frank O'Grady.

50492. He was the judicial tenant, and you were tenant under him?—He held a farm from Lord Dillon, and there were nine tenants on that farm, and I was one of the nine.

50493. Most Rev Dr. O'Donnell.—He held under lease?—Yes.

50494. Mr. Kavanagh.—How many years' purchase did you buy at?—At fifteen; but before we had purchased my judicial rent was £12.

50495. Sir John Colomb.—Originally your rent was £24?—Yes.

50496. Did you go into court?—I got a reduction before I went into court. My rent before I went into court was £15.

50497. When you went into court what did it come down to?—£12.

50498. Was your judicial rent £12 when you bought your holding?—Yes.

50499. And the effect of purchase in your case was that your annual payment was reduced from £12 to £5?—Yes, to £5 17*s.* It was £7 4*s.* under the Ashbourne Act, under which I was buying when I signed my purchase agreement, until the Act of 1903 came into operation, when it was lowered another £1 7*s.*, so that my present annuity is £5 17*s.*

50500. At what date did you actually buy?—Eight or nine years since.

50501. Mr. Bryce.—You have purchased from the Congested Districts Board?—Yes.

50502. Most Rev. Dr. O'Donnell.—You purchased from the Congested Districts Board, and the annuity as first fixed, was £7 4*s.*?—Yes.

50503. And the 1903 Act was passed before the vesting order was made, and you got the benefit of the reduced annuity, which was brought down to £5 17*s.*?—Yes.

50504. In other words, your four per cent. annuity made £7 4*s.*, and your 3¼ per cent. made £5 17*s.*?—Yes.

50505. Sir John Colomb.—Were any improvements

de on your holding?—Except what I did myself; hing by the landlord.

0506. Were any made by the Congested Districts ard?—Yes; the Congested Districts Board drained rt of it.

0507. Mr. Bryce.—Up to what date was your rent ?—Up to 1879.

0508. Then you got a reduction from £24 to £15? Yes.

0509. Mr. O'Kelly.—Before the Act of 1881 was sed?—Certainly.

0510. Was it a voluntary reduction?—Well you y call it voluntary—we forced it out of him.

0511. Sir Francis Mowatt.—What do you wish to us?—Although nearly every perch of our parish is rchased by the Congested Districts Board it still very congested. There is one townland re, the townland of Larganboy, which has sixty- r tenants, and their average valuation, I believe, about £1 15s. or £1 16s. There is a large grass m purchased by the Congested Districts Board ely that is still undivided, and it would be well hose people could get patches of it and be migrated, ause they cannot be happy while they are as at sent. I wish some of you would go see this land.

0512. Mr. Sutherland.—Where is it?—Between ock and Ballyhaunis.

0513. Sir John Colomb.—Who is the landlord of s grass land?—It was Mr. Knox, from Ballina, t sold this island farm.

0514. And you and those who want to get the ss lands are purchasing owners on the Dillon ate?—On the Taaffe Estate that they purchased ly. The rents are not fixed yet.

0515. Most Rev. Dr. O'Donnell.—Sir John omb wanted to know whether you and others you who would like to migrate to that d on the Taaffe Estate are tenant pur- sers on the Dillon Estate?—I did not say y want to migrate to this farm. I only sug- t it is in the neighbourhood of this Larganboy. m not speaking for myself, but for those parti- ar tenants. Although we are bought out by the gested Districts Board we are still congested, and elieve the large majority of them would migrate other places provided they got good holdings. ir holdings at present are too small, and the ily must migrate to England annually.

0516. Would the other tenant purchasers whose dings are too small agree to surrender their pre- t holdings for the enlargement of neighbouring dings and go to better holdings at a distance?— great many of them would, provided they were sfied with what they got. Some time ago it was the case, but migration is growing in the ntry.

0517. You think that the feeling against it is dis- earing?—I think so; myself for instance.

0518. Mr. Bryce.—You would not mind migrat- ?—Not if I thought I could improve my present dition.

0519. Sir John Colomb.—Do you think that ants who have been dealt with by the Congested tricts Board, and for whom the Board has done t it could, would be more inclined to migrate m tenants who have not been so dealt with: do think that the fact of their improvement makes m still more inclined to migrate than they were re?—I know that that is so.

0520. Mr. Bryce.—You would not mind migrat- to Roscommon if you thought you could improve r position?—I have no great love for Roscommon il they give up cattle driving.

0521. Sir John Colomb.—If you went to Roscom- n do you think that they would drive you the ie as they drive the cattle?—I don't think they ld, but there were some grass lands in the Knock ghbourhood to which the Congested Districts Board orted people, and we did not consider that fair. y imported them from other parishes, and left the people in the neighbourhood with very small patches, which the people in the neighbourhood did not consider at all fair.

50522. Most Rev. Dr. O'Donnell.—You think that those in the neighbourhood should be first provided for?—That is my opinion.

50523. When the people in the neighbourhood were fairly well provided for would you object to these other people coming in?—Not if the neighbourhood was provided for first.

50524. You would not expect any sons of farmers to get holdings before these people?—No, but where the people on the spot were congested, and they imported others, we did not consider that they acted fairly.

50525. Mr. Bryce.—The question of what is fairly provided for is a question of degree?—Just so.

50526. There must be differences of opinion, and even the best organisers, like the inspectors of the Congested Districts Board, might occasionally not take the same view as the people themselves as to what was fairly provided—They hardly ever do. You heard Father Fallon and Canon Stephens speak about the Robe. I might say that I live at the source. There is a lot of our parish flooded with that river. Sometimes the flood which occurs lower down backs up towards the source.

50527. Mr. O'Kelly.—What is the condition of the Robe at present?—I cannot tell about further down than Kilknock. It has flooded this year many acres, especially of tillage land.

50528. It is one of those places that you suggest the Commission might see?—Yes; I only wish they would see this place and the townland of Larganboy. They would get more evidence in that way than we could give them in a week here. There is another property not sold yet, Mr. More O'Farrell's. I had a letter from some of the tenants. They are flooded very badly, and the land is highly rented. They have to go three and four miles for turbary. That is in Belliskra and Creevagh. It is between Ballyhaunis and Claremorris, about the railway.

50529. It is not very far from the Triston Estate; part of it adjoins the Triston Estate?—That is another estate that is congested, although in the hands of the Congested Districts Board. Larganboy is near the Mannan Lake, which does great harm. It is about two Irish miles north-west of Ballyhaunis. It is on the Taaffe Estate. Some time ago the Commissioners were negotiating to buy the Taaffe Estate. On account of that townland they would not buy it. They thought it was not security for the purchase money. They have now bought the whole estate, but it is not vested in the tenants yet.

50530. Mr. Sutherland.—What does require to be done to the River Robe?—To drain it by lowering the bed of it, cleaning the river and taking the water away.

50531. Sir John Colomb.—Were you the tenant before 1879, or your father?—I was the tenant since 1865.

50532. And can you tell us—because the difference between the old and the present payment is rather startling—how you managed to pay £24 for your holding?—I can. Because the produce of the holding nearly all went to the landlord. The people are living better now than they were then, and they are better clothed.

50533. Mr. Sutherland.—The tenant gets more and the landlord gets less?—Yes.

50534. Mr. O'Kelly.—That is a very wise arrangement?—Yes.

50535. Sir John Colomb.—Was the middleman a business man, a shopkeeper, or what?—He was an agent for three or four landlords. He was agent for the Taaffe Estate, and a very bad agent he was. He said once that a high rent was the best manure that was ever put out on land. There is a man living at Larganboy who can tell you that if you go down to see him.

Mr. Luke Prendergast, examined.

0536. Sir Francis Mowatt.—Wher do you live?— Woodstock. My holding is eight acres. My her died; my wife died first. I was in England n, six years ago. I was left with four little hans. I could not go to England since then. father died two years afterwards, and he bought a little bit of a holding from Colonel Browne seventeen years ago. It was 2 acres 1 rood. When my father died Colonel Browne did not drive out my stock out of this little place. Then I served him with a notice to have a fair rent fixed on my place, and he then deprived me of this little field of 2 acres 1 rood.

Aug. 30, 1907.

Mr. Luke Prendergast.

50537. You had no property in it. You merely had an understanding that your father should buy it?—Yes. I looked after my father to the best of my knowledge, and when my father died Colonel Browne brought me to Ballinrobe, on the 13th of last April, and he decreed me for the possession of this 2 acres 1 rood.

50538. Most Rev. Dr. O'Donnell.—And then you had remaining the eight acres?—Yes. I carried clay on my back in a basket from my father's holding to this little field. When we were in Ballinrobe, before Judge Murphy, and he asked Colonel Browne what sort of cattle I had on this field, and the latter said, six horned cattle, from the 14th of February to the 13th of April, which was not true, as I had nothing but two suckling calves.

50539. You have three of your family in America?—Yes, sons.

50540. Others migrate to England—how many of them?—Two.

50541. They come back?—They do in the winter.

50542. Do they live on the same holding with you?—One of them does. The other is married, and lives near Balla.

50543. Do they work on this farm?—One does, along with me.

50544. Sir Francis Mowatt.—What else do you wish to tell us?—On Colonel Browne's Estate the tenants are anxious to purchase the grass lands. There are several tenants living on the estate in a very congested condition, but it is not scheduled on account of the large number of grass farms around us. Colonel Browne is in occupation of the fine grazing lands and we live for the most part on the cutaway bog and our holdings are very uneconomic. Colonel Browne does not live at home and therefore is heedless and forgetful of the severe life of our people, especially in the winter time. All the men go to England and slave there for six or nine months of the year. I was there myself and had to sleep with others of my countrymen in barns and out-houses, where there was no such thing as a bed, in a place where an Englishman would not put his horse.

Mr. Mark Waldron examined.

Mr. Mark Waldron

50545. Sir Francis Mowatt.—Where do you reside?—At Killean, Ballindine. I farm 29 statute acres. My valuation is £12 and my rent £14. I was paying £26 8*s*. before the Land Act of 1881. The landlord was good enough to take off 6 acres at that time and to raise the rent from £18 to £27 8*s*. I represent about sixty-four tenants and I speak for them and myself. I am a tenant on Lord Oranmore's Estate. I have about the largest holding on the property. There were about fifty tenants of the property who held on an average 15 acres of land and about forty who were migrated who held about the same amount from good and arable land in a place called Carrowlena to a place called Killeen, where there were tenants living in a congested estate.

50546. Sir John Colomb.—When were the fifty tenants evicted?—Between 1862 and 1866. Their holdings were divided, and parts given to those who were migrated. I have seen two families compelled to live under the same roof in Killeen, which on an average had only about five acre English holdings of reclaimed bog. This migration scheme was carried out by Lord Oranmore about 1862 to 1866, before we got fixity of tenure. The tenants were promised the grass of a cow and calf on good pasture at £2 a year; now they have to pay £3 on barren, unhealthy land, where a good many of the cattle die annually. They were promised by giving up peaceable possession that his lordship would give them the place of a cow and a calf on good arable land. When they got possession he charged them £4 on one farm. That was too good, and he chased them from that, and chaged them £3 on bad mountain land.

50547. Were you a tenant on the estate yourself?—I am there still.

50548. Are you speaking of what you know absolutely?—Of my own knowledge mostly. The cows die from blood murrain and other diseases. There are 3,000 acres of the property let to invading graziers from other towns and properties, while there is only about 300 or 400 acres in the hands of the tenants. The arable land of the property is in the hands of the graziers, while the tenantry are living on unreclaimed patches of bog. The tenants who were migrated and evicted had about 2,000 acres of this arable land in their possession. I can show the tracts of the houses they were evicted from. There are some of those tenants and their representatives living in hovels in the little village of Ballindine. Lord Oranmore now wants to claim this demesne land where these tenants were evicted. The majority of them are living to-day. He never offered his land for sale, but when approached by the tenants he barely offered as much as would bring their holdings to the area of 12 acres English. He gives no material employment; whatever he does give is given to imported Englishmen and Scotchmen.

50549. Do you mean the Commission to understand that the larger portion of the labourers are Englishmen and Scotchmen?—Yes.

50550. The greater proportion?—The great bulk of them.

50551. Do you wish the Commission to understand that the labourers employed by Lord Oranmore are mostly English and Scotchmen?—I think the majority are.

50552. You mean the greater number?—Yes. I don't mean to say that those who are doing the dirty work are English and Scotch, but anybody who has a fancy job is either English or Scotch.

50553. What do you call a fancy job?—Gardening, milling, looking after forests, rabbit-trapping—these are fancy jobs.

50554. Do you mean that the special men engaged in the saw-mill or at game-keeping, or do you mean that the actual labourers are mostly English and Scotch?—They are, because any man who won't work for 8*s*. a week, he will go to England or Scotland for him.

50555. Mr. Sutherland.—Does he pay them more?—No, but when they go over 8*s*. a week he knows that English and Scotchmen won't work for that, and he will have them for the high money when it is going. That is my point. I never worked a day for him, and I hope I never will, but this is the evidence of what the tenants complain of, and I am witness to it myself. I have no ill-feeling towards him, but I come here to tell the truth, and will. The tenants are very poor, living a hand-to-mouth existence, and depending on the mercy of the shopkeeper. In bad years like this the crops are a total failure. The tenants would never be able to live only for the support they get from their exiled friends and children in America. Owing to the smallness of the holdings and continuous tillage the land is exhausted, and produces potatoes and other vegetables in a rotten state, often unfit for human use. The drainage of the River Robe and its tributaries would greatly benefit the people of my parish. There is enormous damage done yearly by the overflowing of the river. Often £100 worth of hay and other crops are swept away. I heard a farmer saying if it was cleared it would benefit him £100, and he said he would not be unwilling to pay a good part of it.

50556. Do you think that in this district the prospects are so bad that the crops this year are going to be a total failure?—They are bad by continued cropping in poor bogland. It is the same as throwing water on a drowned rat to be cropping it at all.

50557. Sir Francis Mowatt.—This is a bad year? Every year is bad by continued cropping on little patches of land that you cannot have a change with. When a man is sowing a little patch every year of the breadth of a table he cannot have a crop on it.

50558. Sir Francis Mowatt.—You would not like to give us the name of the farmer who would be willing to contribute towards the cost of draining the river?—I would if you press me. The area of his farm is 200 acres, and about 20 acres of it is annually flooded.

50559. What you really want to bring before the Commission is that these people cannot live decently on their present holdings, and you think that the Congested Districts Board or some other Department should have power of purchasing the grass lands and untenanted lands, and adding them to the small holdings of tenanted lands in such quantities as would make them economic?—That is the fact.

Mr. DAVID JORDAN examined.

50560. Sir FRANCIS MOWATT.—You are a farmer?—Yes. I have 8½ acres; my valuation is £4 2*s.* We have purchased. The Congested Districts Board purchased the Dillon Estate surrounding our property. There are thirty tenants on our estate, which belongs to the Rev. Thomas Wallace, of Booterstown, County Dublin. We purchased before the sale of the Dillon Estate. It is at Lecarrow, near Ballyhaunis. There are no grass lands on the estate which could be purchased, and we are excluded by the Congested Districts Board from any privilege in the Dillon Estate by which our holdings might be enlarged from the surrounding farms.

50561. Mr. O'KELLY.—Is not it so that the people contiguous to these grazing farms would have a prior claim to them?—Yes, but they got their holdings enlarged, we want to be brought under some statute that would give us the privilege of getting our holdings enlarged.

50562. Sir JOHN COLOMB.—Do you mean to say that purchasing annuitants want the Congested Districts Board to confer on them the same benefits as those conferred on people who have not purchased?—Yes. The turbary is under the same authority, and we would get some privilege of getting it on the surrounding estate. There is a property not yet purchased by either the Board or the Commissioners, and it may be purchased, and we may be supplied from that.

50563. Most Rev. Dr. O'DONNELL.—Would some of you be willing to migrate to a distance so as to leave their farms for the enlargement of the uneconomic holdings of their neighbours?—Yes. The greatest grievance is the want of turbary. For forty years before the Dillon Estate was purchased by the Congested Districts Board we had the right of cutting turbary on the Dillon Estate on payment of five shillings a year. When the Board purchased the Dillon Estate we were excluded from the bogs, and we were not even allowed to buy any from them.

50564. The turbary was divided among tenant-purchasers on the Dillon Estate?—Yes. They supplied some of the tenants on the estate from year to year. Now, they have even gone to the fifth place for turf. We had to shift from time to time to an inferior quality and to expend a considerable amount of labour in some cases in order to get a sufficient supply from the bogs, and we wish to be brought under some board, the Congested Districts Board or the Estates Commissioners, by which we would be encitled to get the turbary, without which the land is of very little use to us.

50565. Sir FRANCIS MOWATT.—Of course you would be prepared to pay an increased annuity?—By all means.

50566. Would you be prepared to give up your present holding and place yourself at the disposal of the Congested Districts Board?—Yes, provided I got something to improve my condition.

50567. Mr. BRYCE.—What price did you pay when you bought; you bought under the Ashbourne Act?—I bought under the Act of 1896 and paid eighteen years' purchase of second term rents.

50568. Most Rev. Dr. O'DONNELL.—Of your four acres how much is arable?—About three and a half acres are arable. There are several other acres that are useless either for grass or hay. There are large holdings according to the area given down against us, but they are unfit for grass or hay. The surface was carried away and nothing was left for the improvement of the holding.

50569. Sir FRANCIS MOWATT.—I understood that your total holding was four acres?—I meant that for arable land.

50570. What is the total acreage of your holding?—About eight and a half acres. Some of it is held in the rundale system.

50571. Mr. BRYCE.—Is any of it held in common with others?—Part is divided by agreement with the tenants, and part of it is held under the rundale system, and the greater part of the holdings vary from two and a half to fifteen acres on that estate, but the greater part of these acres is cutaway bog with nothing but for reclamation. It was neglected by the landlord and the mud was carried away and nothing left but the rocks.

50572. Have you any cattle?—I have three altogether, a cow and two calves.

50573. Where do you feed those?—I buy grass anywhere I can get it. I send them sometimes to Roscommon.

50574. You do not feed them on your own holding?—I could not do so. I keep a cow and two calves. It is as much as I could keep there. It is principally by hand-feeding with shop stuffs that I keep them.

50575. Sir JOHN COLOMB.—Have you any other business besides farming?—No.

50576. You live entirely by your farm?—Yes, and by the help of my sisters away in America.

50577. What is your annuity?—£2 8*s.* 10*d.*

50578. What was your rent before purchasing?—£3 7*s.* 6*d.*

50579. You purchased under the Act of 1896?—Yes; in the year 1900.

50580. Do you intend to claim the decadal reduction or go on paying the same annuity for the shorter period?—I will ask for the decadal reduction.

50581. You will be entitled to do that in a few years?—Yes.

50582. At the time you purchased there was no idea of providing enlargements for the tenants on that estate?—No. The Board did not penetrate to our locality, and we had no knowledge of the purposes or intentions of the Board.

50583. You are anxious that some public authority like the Board should be facilitated in improving your condition?—Yes.

50584. You have conveyed that some of the tenant-purchasers would be willing to migrate to considerable distances?—Yes.

50585. Sir FRANCIS MOWATT.—You told us you had a cow and two calves?—Yes.

50586. I did not quite understand subsequently whether you had to send the cow and two calves away or whether you kept these on your holding and sent away others to Roscommon?—When they come to two years old they are sent on to grazing farms in Roscommon or other places.

50587. What distance do they go?—Sometimes thirty miles.

50588. Sir JOHN COLOMB.—What would happen you if there was no grazing farm to send to?—I am sure I could not tell you what I would do. I should live on whatever vegetables would grow.

50589. It would be a very serious damage to your farming if there were no grazing lands to send them to?—Yes, under the circumstances.

50590. Most Rev. Dr. O'DONNELL.—If the grazing lands to which you send your cattle were added by any means to your farm would not the difficulty disappear?—It would.

50591. Mr. O'KELLY.—Would not it be far better for you if you had in your possession at a reasonable rent the grazing lands to which you have to send your cattle?—It would, but it is not convenient without migrating.

50592. If you had migration the question would be solved?—Yes. We would migrate willingly.

50593. Mr. BRYCE.—Where are your sisters?—In America. There are four of them.

50594. Mr. O'KELLY.—Would you have any objection to go to Roscommon?—No.

50595. What kind of reception would you get when you got there?—That would have to leak out afterwards.

50596. What do you think the general attitude of public feeling would be?—In some places where the grazing farms are small they would naturally wish to keep them for themselves.

50597. Would you apprehend any unkind feeling towards you if you were to go to a district where the local people fancied they had a better claim than you had?—No. I would not.

50598. You don't think that that feeling is existing?—I don't think it is. There might be individual cases, but not many.

50599. You think that public opinion is beginning to have a better appreciation of what public policy ought to be in connection with these matters?—Yes. The public leaders are advocating that course.

50600. Would you be surprised to hear that a very prominent man in Roscommon said a short time ago the congests from a distance should not be admitted so long as sons of tenants from a distance might be planted on the land on which those congests would be placed?—I would not be surprised. Individual

Aug. 30, 1907.

Mr. David Jordan.

cases will always exist, but that does not apply to the generality of cases.

50601. Sir FRANCIS MOWATT.—Of course that is a subject that must be continually discussed between small tenants here. Should you say that the general feeling of the small tenants if they were offered migration would be much the same as you have expressed to us, that if in a neighbouring county they can be supplied with holdings which would better their lot they would be quite prepared, as far as they tell you, to run the risk and go?—Yes; they would be. It would be much better to advocate the removal of those most industrious tenants and those better-off tenants who would be better able to farm the large farms than the small tenants.

50602. Mr KAVANAGH.—Your holding is in rundale?—Part.

50603. You purchased under the Ashbourne Act?—Under the Land Purchase Amendment Act of 1896.

50604. Had not you to have a map of your holding which you purchased?—We were supplied with no maps. We purchased direct from the landlord.

50605. I suppose that you know actually where your holding is?—Yes.

50605A.—And it is in different places?—It is in three different places.

50606. Sir JOHN COLOMB.—Although you have no map your farm was inspected before the sale?—Yes, it was.

50607. Therefore, all the circumstances of your holding were thoroughly well known to the inspector?—Yes.

50608. Mr. O'KELLY.—They were inspected, of course, for security and not for re-arrangement?—No; it was inspected on behalf of the landlord, and then by the Land Commission.

50609. Do you think it was a wise proceeding to purchase in that manner considering that the Congested Districts Board might have been asked to intervene?—If we had understood at the time we should not have purchased except through the Congested Districts Board.

50610. Sir JOHN COLOMB.—You had a paper setting out exactly what your position would be with regard to the land when you purchased; did you understand what was going to be yours when you purchased?—Yes.

50611. And was that given to you on paper?—Yes.

50612. Did that state that part of your farm was rundale, intermixed with others?—No description of the farm was given.

50613. Sir FRANCIS MOWATT.—There was no little drawing of your holding?—No.

50614. Mr. O'KELLY.—You say that immediately the Congested Districts Board purchased the Dillon property your friends on the Wallace Estate were deprived of the privilege which they formerly had with regard to turbary?—They were.

50615. Tell me exactly the facts?—The facts are that we were denied the use of turbary on the bogs which we had been getting for forty years previously for five shillings a year.

50616. With whom were you accustomed to make arrangements for turbary for five shillings a year?—With the bailiffs on the Dillon Estate.

50617. The Congested Districts Board purchased the estate and the bailiffs disappeared?—Yes, and our rights too.

50618. Did you make any representations to the Congested Districts Board for the continuance of your privilege?—We made representations to the Board and the answer was that it was purchased exclusively for the tenants on the Dillon Estate, and that outsiders would not be allowed in on the estate.

50619. Would you describe the tenants on the Wallace Estate as outsiders considering that for many years they had been outsiders?—They have been described by the Board's officials as outsiders. They did not live on the Dillon Estate. Therefore they were not entitled to turbary on the Dillon Estate, as some of the Board's officials said that the Dillon Estate was purchased exclusively for the tenants on that estate.

50620. Sir JOHN COLOMB.—Your holding was on one estate on which there was no turf?—Yes.

50621. What you did was to arrange with the bailiff on the Dillon Estate every year that you would be enabled to cut turf?—Yes.

50622. It was a year-to-year arrangement?—Yes.

50623. And now you cannot get in and you are obliged to go for turf to a more inconvenient distance?—Yes, and to take turf of inferior quality, sometimes after a considerable amount of labour expended on the bog. We are deprived of that.

50624. But you don't claim that you had a right to the Dillon bog. All you claim is that you had accommodation of which the purchase of the Dillon Estate deprived you?—Yes.

50625. Mr. O'KELLY.—And the convenience enjoyed for forty years would naturally suggest if it did not altogether prove a right?—We could not claim a right on it.

50626. But the fact of having enjoyed unchallenged this privilege for forty years would naturally suggest to the minds of an unsophisticated people the existence of a right?—Yes, and besides that we did not pay it for part of the forty years, but only for fourteen or fifteen years. It was understood that there was some arrangement by the landlord that we were to get turbary on the Dillon Estate.

50627. Mr. BRYCE.—You will understand that the first duty of the Congested Districts Board is towards the tenants on the Dillon Estate itself, and as it is calculated that this turbary will not last more than forty or fifty years, they are bound to preserve the turbary for the tenants on the Dillon Estate?—That excludes us from any rights.

50628. The Congested Districts Board had to look forward and see that the tenants on the Dillon Estate who were buying their plots at a particular annuity should have a continuance of turbary for a length of time, whereas if all estates were allowed to get turbary the turf on the Dillon Estate might come to an end very soon?—There is as good an estate within a radius of three or four miles, and there are three bogs on which the tenants of the Wallace Estate got turbary, and there were some who had bog attached to their holding, though judicial tenants were left sufficient bog for three.

50629. Sir FRANCIS MOWATT.—I don't understand that you bring any charge against the Congested Districts Board?—No; I am bringing a charge against the Act of Parliament.

50630. What you say is that you have been deprived of a convenience that you enjoyed for many years. The result has been to leave you in a worse position, and you therefore suggest very properly that some arrangement, whether by legislation or not, should be come to by which you could again get your turbary on sufficient payment, that is the extent of your evidence?—And some of them who surrendered the bog on easy terms to the Congested Districts Board were allowed as much bog attached to their holding as could supply us.

50631. Mr. O'KELLY.—When you say surrendered what do you mean—they never had a right of turbary?—These people had. They had judicial tenancies. Because they relinquished their rights to the bog they have been left more than supplies their holdings, and it is from that we are supplied.

50632. Do you say that the Congested Districts Board deprived the tenants on the Wallace Estate of anything to which they had through a judicial tenure?—No. I refer to those tenants on the Dillon Estate who surrendered their bog on easy terms, and who have them attached to their holdings. It is from them we get a supply.

50633. Most Rev. Dr. O'DONNELL.—You do get a supply there now?—Sometimes. I have had to go to five different places during the last seven years.

50634. You appreciate what Mr. Bryce put to you, that the Board, or any other authority selling to tenants on an estate, is bound to see that the tenant purchasers on that estate for a fair number of years to come shall have a supply of turbary?—Yes.

50635. At the same time it has been a considerable hardship to you not to have access to their turbary?—Yes.

50636. You consider that some of those who have got turbary have got more than they require?—Yes. It is from these people that we get our supply at present.

Mr. PATRICK CLARKE examined.

Aug. 30, 1907.

Mr. Patrick Clarke.

50637. Sir FRANCIS MOWATT.—What are you?—I was a herd. I am a tenant now under the Congested Districts Board at Ballyglass. My holding is twenty-four acres. The valuation is £11 5*s.*, and the rent £11 15*s.* They put a big fine on me.

50638. Most Rev. Dr. O'DONNELL.—Was it to be paid in money?—Yes, £50.

50639. You had no land before?—No. I was a herd. Half of my twenty-four acres is bog.

50640. It is very cheap at £50?—I don't know.

50641. Sir JOHN COLOMB.—You were not forced to make that arrangement. You entered into an arrangement for your own advantage according to your own judgment with the Congested Districts Board—is that so?—Yes.

50642. What is your complaint?—My complaint is that my neighbour, another herd, got thirty-four acres of land, and they did not charge him any fine at all.

50643. That is bringing in other people's business. We can only get your evidence on your own business. You made this arrangement because you thought it a good arrangement. Your complaint is that another man made a better bargain than you?—They are giving to other people who made no bargain.

50644. Giving to other people who had land?—They took away my way of living from me. I had a better way of living then than now.

50645. Sir FRANCIS MOWATT.—That is what you complain of?—I want to get the fine back.

50646. Would it meet your views equally if the fine was put on the other men?—No; I don't want money to go on any man.

50647. Sir JOHN COLOMB.—If the other men had paid a fine would you have any complaint at all?—They gave me £20 back last April, and put it on the rent.

50648. Most Rev. Dr. O'DONNELL.—You were originally charged £50 on coming into that tract of land, seeing that you had no land at all before that?—Yes.

Sir FRANCIS MOWATT.—So what you have done is paid a fine of £30, and had your annuity increased to meet the £20.

50650. Most Rev. Dr. O'DONNELL.—That £20 was given back to help you to stock?—No.

50651. What did you do with it?—They put it back on the purchase money.

50652. Did you stock your land?—Yes, as well as I could.

50653. Had you stock before you came there?—Yes. I had a few beasts.

50654. Sir JOHN COLOMB.—Are you living in the house you occupied as herd?—Yes.

50655. Was there anything done to your house?—No, but they gave me a grant to do so.

50656. Did they fence your land?—They had only one ditch to make on my land.

50657. They did that?—They did.

50658. You had no land before?—No land.

50659. Therefore, there had to be land enclosed for you?—Yes.

50660. Sir FRANCIS MOWATT.—How much did they grant you towards the improvement of your house?—I got a free grant from the Congested Districts Board of £10 towards improving my house, and borrowed £12 for room. The £12 is added to my purchase money. I had only one room. There were nine of us sleeping in the one room. I had to make a little room myself.

50661. Mr. SUTHERLAND.—Are you worse off than before?—I am sure I was as well off before.

50662. You are quite prepared to give it up?—No. I will not give it up now.

Mr. THOMAS CONNOR examined.

Mr. Thomas Connor.

50663. Sir FRANCIS MOWATT.—Where do you reside?—Ballinamalla. I am an evicted tenant on the estate of Mr. Isidore Burke. In 1881 there were forty-five tenants evicted on the estate in one day. My father-in-law took up my holding, and afterwards gave it back to my wife, his daughter. The area was thirteen acres; the rent was £7 14*s.* No rent was fixed.

50664. Do you pay that rent every year?—Yes.

50665. What do you mean by saying that no rent was fixed?—I did not go into court. I got a holding at Ballinasalla. My old holding was only valued at £79, and I had to pay £61 with this £79 for the new holding.

50666. You gave up the old holding and you got a new holding and had to pay £61 for the change?—I paid £31 down, and £30 in addition with the rent.

50667. Sir JOHN COLOMB.—Do you mean that £79 was decided to be the tenant's interest in the farm you gave up?—Yes.

50668. And £61 was the value of the tenant's interest in the farm you took up?—Yes. My new holding comprises thirty-six acres of inferior land. My rent is £16 10*s.*, and my valuation is £21. The rates are high in the Claremorris Union. It will be very hard for me to pay all. I have to go five miles for turbary. I hope you will recommend that the £31 fine will be refunded to me to enable me to start the world anew.

50669. Are you paying rent to your landlord or to the Congested Districts Board?—I am paying to the Land Commission. I was thinking that they might refund me that money.

50670. Most Rev. Dr. O'DONNELL.—The valuation £21 and the instalment is £16 10*s.*?—My valuation is too high.

50671. The new holding is pretty good?—Some of it is good, and some bad.

50672. How much of it are you tilling?—Three or four acres.

50673. How long are you in possession?—Over three years.

50674. Are you tilling more than before you came there?—I was tilling more before I came there. I had no crop there the first year I came. It is very hard for me to live there at all.

50675. Mr. O'KELLY.—If you got back your fine would you be willing to have your annuity increased accordingly?—Yes, I would.

50676. Sir JOHN COLOMB.—Were you in your holding at £7 14*s.* before you got under the Estates Commissioners?—Yes. Here is the old receipt. (*Produces receipt*).

50677. You had the old holding and were evicted from it; then your father-in-law got it and gave it to your wife?—Yes.

50678. Has your wife that holding still, or did she make it over to you?—She made it over to me.

50679. The holding you were evicted from is the holding that was valued at £79?—Yes.

50680. Who valued it at £79?—The Land Commission.

50681. How long after the eviction was it until your father-in-law handed the holding to your wife?—From November until May.

50682. In a few months you were practically restored to the holding from which you had been evicted?—I was put in as a caretaker, and he was keeping half of it for a long time until his son got married and he assigned half of it to his son. When I heard that I turned round and said his son would not come there any more. That is how I took possession of it.

50683. Most Rev. Dr. O'DONNELL.—I would like to call attention to how fortunate a man you are. The tenant-right of the old holding was estimated by the Land Commission at £79. On getting this enlarged holding you paid £31 cash and £30 was added to the capital on which you pay your annuity; Adding the £61 and the £79 together you get £140. For £140 you get a holding valued at £21 a year. You are a fortunate man?—Let us have the money. That will do for me.

Sir FRANCIS MOWATT.—Father Fallon in giving his evidence said he thought that there were in court several of the migrants with whom he had had conversations as to how their circumstances had been improved by migration. If any of these migrants are in court we should like to ask them a few questions as to how their prospects have been affected by the migration. If there is any migrant present we shall be glad to ask him some questions.

The Commission adjourned.

NINETY-NINTH PUBLIC SITTING.

SATURDAY, AUGUST 31ST, 1907,

AT 11.0 O'CLOCK, A.M.

At the Courthouse, Claremorris.

Present:—The Right Hon. Sir FRANCIS MOWATT, G.C.B. (in the Chair); The Right Hon. Sir JOHN COLOMB, K.C.M.G.; Most Rev. Dr. O'DONNELL; JOHN ANNAN BRYCE, Esq., M.P.; CONOR O'KELLY, Esq., M.P.; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Aug. 31, 1907.

Mr. Martin M'Loughlin

Mr. MARTIN M'LOUGHLIN examined.

50684. Sir FRANCIS MOWATT (*in the Chair*).—You are a farmer, Mr. M'Loughlin?—Yes, sir.

50685. Tell us the particulars of your holding. What is the acreage?—27 statute acres.

50686. And the valuation?—£8.

50687. And the rent?—£4 8*s* 10*d*.

50688. And where is it?—Knock, Ballyhaunis. That is the postal address.

50689. Tell us what you wish to say?—Well, on the District Council for the past eight years I have been acquainted with the wants of the tenant farmers in my district.

50690. You are going to speak about your own district, are you?—Yes, my own district in particular. Though in my district they nearly have all bought out under one or other of the Land Acts, and the people appear to be contented and happy, still it did not prevent, after all, migratory labouring in England, or yet emigration to America. In my own district about fifty to eighty families would require to be migrated, and the holdings enlarged, before they could be made economic.

50691. Sir JOHN COLOMB.—Do you mean the holdings of tenants who have actually purchased?—Yes, sir, mostly.

50692. Sir FRANCIS MOWATT.—What is the number you say—about eighty families?—About eighty families.

50693. About how many families would you say there are in your district?—About 600 in the parish.

50694. And of those you think eighty should be migrated?—Yes.

50695. Are these holdings divided amongst the 600?—Yes—most of them.

50696. That is the point. What average annuity are those eighty paying now?—I should say about £1 10*s*., or from that to £3, and the valuation would be from 30*s*. up to £4—the majority of them in my parish.

50697. Sir JOHN COLOMB.—What electoral division is this in?—Knock South electoral division; but I mean the people of Knock North, and portion of Ballyhouly and Kilkelly divisions also, situate in the parish of Knock.

50698. Yes?—And I have had ample opportunity for eliciting the views of the tenant farmers for the past eight or ten years, for I was supervisor under the Parish Committee working in Knock Parish, and I had ample opportunity for eliciting from them their views. They would, in my opinion, be quite willing to be removed, that is, provided that their rents would be lower than what they are at present. The rents of the new holdings they consider too high in the most of the new holdings the Congested Districts Board are creating. The valuation, also, they consider too high, for they lay, I believe about £2 or £3 on each house, together with the land valuation.

50699. Are they purchasing owners under the Board?—They all nearly purchased about here. They are paying to the Land Commission now, most of the people in my place.

50700. When did the property pass from the landlord to the Board?—About nine years ago. I mean the Dillon Estate.

50701. What property was it?—The Dillon Estate.

50702. And what was your former rent?—£9 4*s*. 8*d*. old rent.

50703. So your annuity is only half the rent?—About half the old rent.

50704. Sir FRANCIS MOWATT.—Have you made the point you wanted to make?—Yes. Together with that, the Congested Districts Board has carried out considerable improvements in my district, in the parish of Knock in the way of building out-offices; I should say for the past eight years about forty out-offices annually, and the construction of roads.

50705. Forty out-offices annually?—About forty.

50706. Every year?—Yes, for the past eight years; and improvements of the dwellings and surroundings and building retaining walls and so forth, I should say about twenty annually; such as setting in concrete floors, inserting large windows, ceiling the inside of the roofs to hide away the old scraws and things that were not nice on the inside of country thatched houses, such as bad floors and so forth; and making sanitary arrangements about the surroundings. Also, the Congested Districts Board has carried out drainage on a very large scale, such as the deepening and widening of the beds of rivers, of small drains, and so forth, and building of houses. And, together with that, I am acquainted with a considerable number of cases of enlargement of holdings in my district. The Congested Districts Board has enlarged a considerable number of holdings wherever land was available in my district, and those people appear to be contented and happy.

50707. Most Rev. Dr. O'DONNELL.—How are the enlargements carried out?—In divisions. They have added so much. They have got three or four, and perhaps five or six, acres in addition to the holdings they formerly occupied.

50708. The condition of those people has much improved?—Much improved—considerably improved.

50709. Sir JOHN COLOMB.—Will you tell me this. Do you consider, from your knowledge of the people, that there is a greater willingness now among them to migrate than there was before the Board took them in hand—do you think that the actual people now are more favourable to moving away somewhere else to a better farm than they were while they were tenants?—They are, provided a yoke would not be put round their neck—provided their rents would not be excessive.

50710. Sir FRANCIS MOWATT.—You say you have had an opportunity of talking with the tenants and hearing them discuss these matters. Are they afraid that if they were migrated in the manner you propose they would experience bad treatment at the hands of the people among whom they were removed?—They are not afraid of that in the least, but they were afraid that the rents they would have to pay would be too high.

50711. But they are a good deal lower than they were?—I mean the new holdings created in the country. They appreciate the work of the Congested Districts Board.

50712. Mr. O'Kelly.—And, after the work of the ngested Districts Board, you say that excessive nt is paid on the lands they purchased?—In many the holdings of course the rents are rather excessive, t in the enlargements of holdings the people are y much pleased.

50713. Let me suggest to you that if you have exsive rents you have them as a consequence of high ces being paid for the land?—I do not take in t. If you please, repeat it.

50714. If the tenants who were put on new holdings ve to pay what you describe as excessive rents is that a consequence of what you may assume to be excessive price paid for the property?—I do not that.

50715. Why would there be excessive rents?—Well, hould say that building new slated houses and outces would account for that. For instance, on the eage that I hold in my own holding, if the Conted Districts Board was to get a new tenant in d build a new slated house and out-offices there, I sider the rent would be nearly double what I pay.

50716. Then, if you exclude from the calculation t building, you would not say the prices or nuities charged by the Congested Districts Board the Estates Commissioners would be excessive?—I uld say that on the Dillon Estate they would not be essive.

50717. But you observe that was under the Ashurne Act?—Yes; in the others they are not so ap.

50718. I appreciate the work of the Congested Dists Board, but I meant to point out that you said t the only objection you have is that prices are g charged that are excessive, and that impose ain responsibilities that might not be as great as y are?—I did not say they were excessive, but I that people consider them excessive.

50719. Do you share the general views of the people? Yes, I share the people's views if they are right.

50720. Then you also agree that the prices are essive?—To a certain extent, because the land ld not be bought cheaper.

50721. Does not that suggest, as a natural corollary what you said, that the prices paid for property too high?—They are high enough. I should say are high enough; and the prices are high ugh, too.

50722. Very well; and would that in any way lify your answer, that you appreciate the work of Congested Districts Board?—It is of the Dillon ate in particular I am talking.

50723. I am talking of the Act of 1903. Would it any way modify your unqualified approval of the k of the Congested Districts Board?—No; I ld approve of the work of the Congested Districts rd.

50724. If you say that the Congested Districts Board e been paying prices so high as to lead to an essive burden upon the purchasing tenant, would t in any way modify or mitigate your general roval of the work of the Congested Districts Board? did not say exactly that the Congested Districts rd are paying excessive prices. I did not say are.

50725. Then tell me why the prices are too high, for Congested Districts Board is merely a philanopic body that does not want to make profit out the people?—The reason of the prices being too is that the landlords are not inclined to sell.

50726. I only want to ask you this simple question. you say that the prices that are paid are too high? want you to reconcile that statement with your unqualified approval of the work of the Congested Districts Board, who are responsible for the prices in the first instance?—I did not speak in particular of the Act of 1903.

50727. Sir Francis Mowatt.—Let me sum up that, please. Mr. O'Kelly has reminded you that you said that the whole charge of rent and rates fell very heavily upon the existing holdings?—Or rather that the people consider so in the new holdings.

50728. And Mr. O'Kelly also, very properly, pointed out to you that the cheaper the land could have been bought the less those charges would have been?—I quite agree with that.

50729. And his suggestion was that the Congested Districts Board have given a higher price for the land than they could have got it for?—They have not.

50730. And they had no power to compel the landlord, or the person desiring to sell, to sell it any lower?—If they had, in my opinion, they would buy the land cheaper.

50731. And therefore the fact that they have had to give more money for an estate than they would have liked does not modify your opinion that they have done as well as they could?—Yes; in my opinion they have done as well as they could.

50733. Mr. Bryce.—You are not a migrant yourself; you are in your old holding?—Yes.

50734. Did you have it enlarged?—No, sir; my holding was not enlarged.

50735. And, with regard to any of the people who have migrated into those new holdings, and complain about the high annuities they have got to pay, do you happen to know whether they are finding it difficult to get on, or whether they are doing well or not?—I have not heard it in particular. I have heard the people say so, that the rents are too high.

50736. You have no personal knowledge of it?—No.

50737. With regard to the other tenants of the Dillon Estate, are they considerably better off than they were?—They are.

50738. And has that affected their relations to the shopkeepers—are they able to pay cash more, and keep out of debt more?—They are.

50739. Is it a usual thing for any of them now to be quite clear of debt, or, generally speaking, are they still in the shopkeepers' debt?—As far as I am aware, not much.

50740. Most Rev. Dr. O'Donnell.—That is a great improvement?—It is an improvement.

50741. With reference to migrants, I was going to ask you this, would it be of advantage, when migrants are settled on grass land, if the authority settling them planted down in their midst an instructor in agriculture, who would show them the very best ways to utilise their new holdings?—I should think it would.

50742. You recollect the Board was able to buy the Dillon Estate at a comparatively moderate price?—Yes, I am aware of that.

50743. Mr. Bryce.—Have you any of those small agricultural banks on the Dillon Estate?—Not in my parish. There are none in my parish. There are in some portions of the Dillon Estate, I believe, but not in my district.

50744. You do not know anything about the working of them?—I do not know anything about the working of them.

50745. Sir John Colomb.—I suppose the wages the labourers earned in the re-settlement of the Dillon Estate did give some of the small holders a chance of clearing off their debts?—Yes, sir; to a certain extent.

Mr. Robert Crawford examined.

50746. Sir Francis Mowatt.—Where do you live, Crawford?—At Ballinrobe. I am both a land at and civil engineer, and also a tenant farmer.

50747. Who are you agent for?—I am agent for onel Knox, of Ballinrobe, and for Mr. Sheffield, oining this town. I am also agent for other small tes in the north of the county, and I am partiarly acquainted, as an engineer, with nearly every perty in the county, so that generally my evice will deal with the whole county as well as this ticular district.

50748. You are appearing on your own behalf?—I am appearing both on my own behalf and generally on behalf of the landlords.

50749. Mr. O'Kelly.—You have not been nominated by the landlords?—No.

50750. And what you are going to say is on your own responsibility?—Yes. I am afraid some of the landlords might think I am far too drastic. I am also superintendent of three drainage districts under trustees, one in Castlebar, one Lough Mask and River Robe, and one in Kilmaine. The first

Aug. 31, 1907.

Mr. Robert Crawford.

part of my evidence will deal with arterial drainage; and I merely want to emphasize what other witnesses have already put before you, that arterial drainage is the crying necessity of the West of Ireland and of the whole of County Mayo; and I can speak for that. Closely allied to arterial drainage comes the question of striping the tenants' holdings. Now, if the holdings were properly drained and striped I believe 80 per cent. would increase in value by probably one-third, thus improving the position of the tenants very much at a very small cost. At present there is too great a desire to rush this thing (the headlong distribution of grass land) because it will be all wanted later on, when the thing is worked out.

50751. Will you tell me where you have had headlong distribution of grass lands?—For instance, on the Clanmorris Estate.

50752. What kind of headlong distribution was there on that estate?—I will not use strong language, but it was a tremendous failure of judgment on the part of the engineers who striped it.

50753. Does not that involve any serious reflection on the Estates Commissioners?—Yes. I think myself (it is only my own opinion) that the Congested Districts Board is the proper authority to take up the entire county of Mayo.

50754. That may be so. We will come to that in a moment. But it is not a reply to my question. Will you tell me what was the failure of judgment that the engineers of the Estates Commissioners were guilty of in the distribution of the Clanmorris property?—Yes. They striped the land, giving the stripes in some cases without water or fences, to people living probably three miles off. It did not reach the small tenants at all. It was the large men (whom I call grabbers) who in various ways got the stripes, and who in many cases are now not able to keep them. They are sub-letting them.

50755. Do you mean to say that on the Clanmorris property those who got the grazing land are unable to retain that grazing land in their own hands, and are sub-letting it?—Yes.

50756. Give us an instance?—In the demesne of Newbrook.

50757. Who owns it?—I cannot give you the name, but Mr. Murphy, who is a large cattle dealer, has one or two stripes I know, at less, I understand, than they are paying the Estates Commissioners.

50758. Would the Congested Districts Board have been better?—Decidedly.

50759. Why do you say that?—They would, in all probability, have taken a couple of the very large tenants off a poor district, and they would have only had a couple of houses to build for those, and the cost of building houses and fencing would be much less than if you were to have a large number of small tenants and had to build a house for each of them. One house, and steading, will do for a large tenant as well as a small one. A couple of large tenants' holdings on a congested townland will simply transform the whole face of the townland to the remaining tenants.

50760. Sir Francis Mowatt.—You say that the lands of two large tenants would greatly improve the condition of everybody round them?—Of the townland.

50761. Do you mean to say that you should get two large tenants to migrate—that you should allot land to large tenants in preference to small ones?—I would migrate two large tenants instead of trying to take five or six or eight or ten small ones away. The small ones cannot, they have not the courage, they are too poor, to undertake the working of land at a distance, whereas a couple of acres added to their holdings where they live, without disturbing their houses or fences or anything, would make a wonderful difference, along with drainage, in the material prosperity of those people. I have had a good deal of experience as an engineer in striping and improving estates in the Counties of Galway and Mayo. I can speak with thirty years' experience here. I have lived here thirty years.

50762. Mr. Sutherland.—You have had no experience of migration?—Except what the Congested Districts Board did at Castlebar. I have seen in Scotland a good deal that has been done both in the Hebrides and Orkneys in that way; but I want to keep myself entirely to our own county, of which I know every corner.

50763. But you have had no personal experience enlarging holdings. You have not had experience settling down migrants?—No; the only way I could enlarge holdings was that if a tenant wished to lea I always induced the landlord to purchase the tenant interest, and then used that, well I might say, coax the tenants to let me stripe their land.

50764. This is all right, but are you sure that wh you are lifting the larger tenants out of a pla that is congested you are not creating congestion?—am, because I think the land and houses that the go tenants have left will, in all probability, suffice settle the small tenants without including in the rent-charge any expenditure. Each might have little strip of the arable land of the two tenants y are taking away. I think a great deal could be do in the way of drainage and redistribution. You ma take it that there is not sufficient land to ma economic holdings for everybody.

50765. Anywhere?—Anywhere in Mayo.

50766. Mr. O'Kelly.—Why do you say that?—think statistics show it.

50767. What statistics are you referring to?—have not got them up in detail; but, from evidence witnesses, I think it is quite plain, and I know fro experience where I go that there would not be econom holdings for a third of the tenants.

50768. You make a general statement?—Yes.

50769. I want to know is that statement founde on investigation?—No, except on the evidence give before this Commission, which I read in the new papers, and from my own observation.

50770. Allow me to remark that in the County Mayo you must divide the congests into two classe Congestion may be relieved on the sea-coast by t fisheries, and congestion may be relieved inland b the acquisition of grass land. Now, in making th calculation, did you have the fisheries in your mind —No; the division of grass land only.

50771. Of course the men on the sea coast mu have recourse to the fisheries to improve their co dition, and the men inland must have recourse to t land?—I only considered the inland. The tenant living inland will not be able to get sufficient lan to make economic holdings if every patch of th grass land was taken up. On the estate of Captai Sheffield, when I opened negotiations with the tenant about three years ago, for the purchase of thei holdings, the first question asked of me was, woul I give them grass land (we have plenty) and I said—"Yes; I will make up each of your holdings t twenty acres."

50772. English or Irish?—Statute acres. The said they were delighted, but in a couple of days th larger tenants said—"No, no; we must get an equa share with the small tenants of whatever is going t be given." I could not allow this, but I offered to giv them as much land as would give them two and a hal times their present holdings, on the condition tha they would agree as to the prices of their presen judicial tenancies, and then I would sell to the Estate Commissioners or the Congested Districts Board (o the best terms I could) all this land for distributio amongst them, and I would make it, as far as possibl a condition that no strangers were to be brought in I am sorry the respected parish priest, Fathe M'Hugh, is not here, as he was present at the nego tiations. They would not make us an offer. W only asked 23½ years' purchase. It was stated her yesterday that we asked 28 years' purchase, but tha was not the fact.

50773. Who made that statement?—Mr. Killeen. He stated that in 1888 the estate had been of fered at 18 years on second term rents, which of course was perfectly ridiculous. There were no second term judicial rents in 1888, or till 1896. I am fourteen years agent for Mr. Sheffield now, and there was never any offer but the offer I speak of.

50774. Mr. Sutherland.—They were sitting down in their original situation?—Yes.

50775. And what was the point?—My point is that they would not make me an offer for their present tenancies at any price. The landlord was willing to sell, but the tenants would not buy.

50776. Sir Francis Mowatt.—You made them an offer?—I offered to sell to them at 23½ years' purchase, but there were three or four of the incorrigibles of the district who prevented them.

50777. Mr. O'Kelly.—You deny the accuracy of Mr. Killeen's statement?—Certainly.

0778. Might I suggest to you that at the time the ·llord offered to sell at eighteen years' purchase were not agent?—On the face of it it was not ·ect, because he said it was on second term rents.

0779. I do not think that was Mr. Killeen's state- at?—Yes. From the nature of it it was not ·ect, because he said it was in 1888.

0780. Most Rev. Dr. O'Donnell.—I recollect that t he stated was first-term rents; and then he was ined to think that the second negotiations were on the basis of first-term rents?—Well, I took it ; he said it was second-term rents, the same rents ow, that 18 years' purchase was asked for.

0781. Mr. O'Kelly.—I want to point out to you at the time that this offer of 18 years' purchase made you were not the agent?—There was no offer made.

0782. Are you willing to oppose your opinion to opinion of a man who was there at the time, ough you were not agent at the time?—Mr. Kil- was not to the fore at the time.

0783. I am talking of the statement put into Mr. een's mouth by one of your tenants. Mr. Kil- , representing that division, made that statement heir behalf?—He was misled.

0784. May I suggest to you that before you were t of that property this proposal was made, to sell 8 years' purchase?—I am quite satisfied it was I am afraid I am talking too much of old s—I would like to go a little further. There point I wish to make. I consider this as an erial matter in connection with the County Mayo l I suppose with other districts), and, if the g is to be settled, I say deliberately that the Go- ment must come forward with a free grant elp the people. They cannot go on by any pos- ity and buy out, and expend large sums in nage and other things and expect that it will be repaid. I should say that at any rate one- l of the cost of the grass lands that are to be hased ought to be an Imperial grant on behalf he tenants. The way I look at it is this. I ld like to make myself clear. The landlord has grass land in his hands is in the position oth landlord and tenant. The same amount of in the hands of a tenant has both the tenant t and the landlord's interest to be purchased out. you saddle a small tenant with a rent- ge on what is the fair marketable value he land, you put on him not only the fair of the holding, but you also put on him a ge for his tenant right. Now I think that is correct. That is not the right way to do it if want to be fair. The bulk of the tenants have rited their holdings the same as the landlords estates, and it is not a penny in their pocket t of it whether their tenant right would sell for 30 or 40 years' purchase. If you buy grass land e market value, which I say should be calculated he net rent for an average of ten years, you will not only for the tenant right, but for the land- s interest in it; and in that way you will saddle small tenants, that you put into the landlord's , with an impossible tax. The problem of the of Ireland should be met by an Imperial grant. e is too much, I say, of political economy. I ot propose to make a pun on the word "politi- but every political party coming in is promis- s everything and giving us nothing. They talk eat deal of 12 per cent. bonus. What does it ant to? To a sum, perhaps, of a quarter of a on for the whole of Mayo. Why, it is not talking of. We want four or five millions.

0785. Sir John Colomb.—I want to ask you this al question. You say you have an intimate ledge of the land in the county of Mayo?—I

0786. You have had opportunities of observing has been done by the Congested Districts Board e one hand and the Estates Commissioners on ther?—Yes.

0787. Now, comparing the operations of the es Commissioners on the Clanmorris Estate those on the property dealt with by the Con- d Districts Board, say on the Bingham Estate, any estate you like, would you, on the e, wish the Commission to understand that in opinion the action of the Congested Districts d has been wiser and better, in the interests of people and in the interests of the State, than the action of the Estates Commissioners?—Decidedly.

50788. You have no doubt in your mind about that?—None whatever. The only outlay that I think might be avoided in the case of the Congested Districts Board is that they build too many houses, and that is a terrible tax. If thorough drainage and fencing are to be done, and those houses built, I think a portion of the cost ought to be met in some other way than by saddling it on the incoming tenant. It cannot be done fairly otherwise.

50790. Do you consider it would be more for the interest of the people and the interest of the State if in Mayo there was only one body acting, and that body the Congested Districts Board?—Certainly, and it should have the whole county of Mayo.

50791. I only want to ask another question, on another branch of the subject. I did not exactly follow you when you spoke of getting a grant of one-third in regard to the relief of the tenants. Do I understand correctly that what you mean is this, that where the State purchase land in the landlord's hands they are purchasing a property that both has its landlord value and its occupation value?—Certainly.

50792. And that you were of opinion that where the new purchasing tenant comes in under the existing system he has to be charged something to carry both?—That is the present system.

50793. Is this what you mean, that in order to settle the grass land question, the difference between what the landlord ought in fair justice to receive, and what the tenant ought in fair justice to pay, if there is a difference, ought to be borne by the State, and not by any particular class?—Yes; that is my point.

50794. Mr. O'Kelly.—And why should the State bear it, which represents the whole public. Do you not think that any class, if they are purchasing their land, ought to pay a price which would enable them to live?—I do not think they should pay less than the market value.

50795. Why should professional men, artisans and labourers be obliged to bear it; because it is they, after all, who are called the State?—This is an Imperial matter.

50796. I do not quite follow your distinction between an Imperial and a State matter; but I want to ask you why should any other class in the community be called upon to make up or to bridge any difference between the money that the tenant should give and the price that the landlord should receive?—Because this is an exceptional matter being dealt with by the Government, and certainly they ought, by a free grant, put it on a uniform basis which afterwards will make the repayment satisfactory; because if you put too high a rent-charge on some of the people it will only have the result, later on, through the whole country, that they will object to pay the amount.

50797. Why should the landlord be paid a high price?—He only gets the market value.

50798. Or rather, I would suggest, the competition value?—Well, if you take a grass farm, and allow for rates and taxes, herding, maintenance, and agency, you will make a very considerable reduction; and if you take a farm of the same description in the tenants' hands and purchase the rent and the tenants' interest, each should be of the same amount—there should not be much difference between them.

50799. Have you sold any property?—Yes.

50800. At what price?—Twenty-three to twenty-six and a half years' purchase.

50801. Did you sell any under the Ashbourne Act?—Yes.

50802. What was the price?—Twenty-two on the valuation.

50803. What was the rent?—The rent was ten per cent. over the valuation.

50804. At twenty-two years' purchase?—At twenty-two years' purchase.

50805. How do you account for the increase from twenty-two to twenty-six?—In the first place, second term rents have been fixed since. In some places first term rents have been fixed.

50806. Why should there be a difference in price?—The first reason is that the annuity is less.

50807. But if the second term judicial rent represents a property diminished in value why is there a difference?—But it is not diminished in value.

Aug. 31, 1907.

Mr. Robert Crawford.

50808. What do you think of the courts who fix the rent?—We take it that we cannot help it; it is a sort of automatic reduction.

50809. But why should there be any difference between these things. It is repeated day after day by witnesses that they were asked higher prices on second-term rents. Why should there be a higher price on the second-term rents when the property, according to the courts, on inspection, has diminished in value so much?—But you did not let me finish. In the first place both the rent and the rent-charge are smaller, and in anything which fluctuates of course people calculate according to the fluctuation. And, in the next place, twenty years ago much better investments could be made of money than what can be made now.

50810. Not at this moment?—Well, you will not get much more than 3½ per cent. now.

50811. Mr. Bryce.—I beg your pardon. There was never a better time for the past twenty-five years than the present?—What will it return in the year? Most of the estates now being sold are settled estates, and the landlord cannot touch a penny of it, and it must be invested through the Public Trustee, and the result is probably that it will be reinvested at 3½ per cent.

50812. Mr. O'Kelly.—Did you read the evidence given by Mr. Waldron, a stockbroker?—Yes, I did; and I see the Public Trustee gave his evidence as to investments, and I think the rate quoted was about £3 10*s.* 0*d.* I also saw where the Judge of the Land Court said he had £30,000 out of land sold, and that he could not get more than £3 8*s.* 6*d.* per cent. on. It is a very serious matter for owners. Another great cause for stopping sales is the delay in getting any money. How can any landlord wait for three and a half years for his money.

50813. He is getting the interest?—It is only the annuity.

50814. And why should he get more?—Because it does not represent anything like the amount of his previous income, and the charges must be paid before he touches a penny.

50815. Mr. Bryce.—You have said that the tenant should not be saddled with the price which had to be paid by the public body—the Estates Commission or the Congested Districts Board—for these grass lands?—Yes.

50816. You said the tenant ought not to be saddled with the whole of that?—No.

50817. On the other hand, if the Congested Districts Board is not to lose it will have to charge the tenant, say, a price of about thirty years' purchase; that is, on your basis, a third too much?—Yes.

50818. Now, the moment you have put a tenant in he has acquired the occupancy interest—has he not—and he can sell it?—Yes.

50819. And it might be said, might it not, that if he is in a position to sell it at once after he is put in he ought to pay something for that?—Well, in all probability, he may have given up other land to get there, because I am very much against giving any land to any person except the present occupiers. The present occupiers ought to have all the good land first and the rest after, because there is not enough land for all.

50820. Most Rev. Dr. O'Donnell.—In pursuance of Mr. Bryce's question, I should like to ask a further question. I gather from you that, from your observation, it is much easier to make the holdings economic by enlargements on the border, without changing the habitations of the people, than by migrating them?—Certainly.

50821. When that can be done?—Yes.

50822. It is an easier and better way to enlarge their holdings than to migrate them?—Yes.

50823. If a man is migrated, do you suppose that he relinquishes the holding from which he migrates for the enlargement of holdings in that quarter?—Yes.

50824. Otherwise, according to your suggestion, he would get the tenant right of the new holding for nothing?—He would.

50825. I want to know this. If the new holding was of suitable extent and the original holding was comparatively paltry, would you consider it fair to put anything on the annuity he is going to pay on the new holding for the great improvement in the tenant right?—I think in such a case as your lordship suggests it would be perfectly fair that something might be put on, as he would get so much of a difference in that way, but I do not think he ought to be charged very much.

50826. Otherwise those who would be migrated would get very big benefits compared with the rest of the population?—They would, to some extent. Of course you must allow for associations, and take into account that for a long time people going into a new habitation would require courage and labour to put them in the position they were before.

50827. You consider that if there was anything put on for the improved tenant right it should be so moderate that the new tenant purchaser could bear that with a good deal of hope for the future?—Certainly; and I consider, my lord, that the only hope of migration is the larger tenants. I am trying to emphasize that.

50828. That point seems to me perfectly sound, but it is not on that I am at present. It would be a fundamental point with you, would it, in cases of migration, not to put upon the migrant any annuity which an industrious man may not reasonably be expected to pay?—Certainly.

Mr. James Glynn examined.

Mr. James Glynn.

50829. Sir Francis Mowatt.—Are you a farmer?—Yes.

50830. Where do you reside?—Esker Valley, Claremorris.

50831. What is your acreage?—About 16 statute acres.

50832. Valuation?—£6 15*s.*

50833. Rent?—£8 presently.

50834. Have you purchased?—No, sir.

50835. Where is it?—It is within a mile of Claremorris.

50836. Mr. Bryce.—Second-term rent or first-term rent?—It is neither first nor second. It is by agreement by the landlord.

50837. Sir Francis Mowatt.—By the landlord and tenant?—Yes. The rent was fixed in court in 1883. The landlord said he had appealed, and rather than go to court again with him, about eight of the tenants agreed to pay an increase of from 10*s.* to 30*s.* for fifteen years.

50838. When was that rise?—In 1884.

50839. After it had been fixed by the Court?—Yes. So that he took off, after fifteen years, this rise that he put on the tenants, and the tenants are paying first-term rents for the past eight years.

50840. Sir John Colomb.—The rent of your holding was fixed by the Court in 1883?—Yes.

50841. And do I understand you that in 1884 the landlord raised the rent?—Yes, sir.

50842. Was there any arrangement as to the alteration of your holding, or alteration as regards a grazing arrangement?—No.

50843. None whatever?—No.

50844. Then do you mean to say that although your rent was fixed on a particular holding in 1883 by the Court the landlord of that particular holding raised your rent?—Yes, sir.

50845. And why did you pay it?—Well, because we could not afford to pay the arrears at the time. He allowed us to run into arrears, and we had no other remedy.

50846. Allow me to ask you this. The arrears could only be an increase, at the outside, of one year. Now, you had an arrear when you went into court?—Yes, one year.

50847. One year's arrear?—Yes.

50848. How do you say that be accumulated arrears, for if it was in 1884 there was only one intervening year when arrears could have accumulated?—There were two then.

50849. You paid no rent for two years?—No; and, not being able to pay rent then, we had to give an increase.

50850. Was it the landlord pressing for arrears that brought this about?—Yes, sir.

50851. Did he take you into the Civil Bill Court?—Yes, sir; not till he raised the rent.

50852. Was it the Civil Bill Court that determined

hat you should pay this rent, and the arrears by nstalments, and added them to the rent?—No, sir.

50853. Mr. O'KELLY.—Were the arrears added to he rent?—No; they had to pay; under fear of having to pay this, or eviction, they had to give this ise on the rent.

50854. But that was to meet the arrears?—No.

50855. Why was there an increase on the rent?—Ie said he had the case appealed before the High Court, and the land was too cheap, and that he hould have more rent, and that if he did not get his rent the tenants would be put to great cost.

50856. As a matter of fact was not the increase n the rent due to the fact that there were arrears n the property, and the landlord wanted to get the rrears in that way?—I do not know his exact reason or increasing rent, but I do know that the other enants and myself had to pay all arrears and the ncreased rent also.

50857. Mr. KAVANAGH.—It was paying off arrears y instalments?—No, not by instalments, because he ad to get it altogether immediately after he got the ncrease of rent.

50858. Sir FRANCIS MOWATT.—What was the landord's name?—Mr. James J. Begley.

50859. Sir JOHN COLOMB.—Were you evicted for rrears?—No, sir.

50860. You were not turned into a future tenant?—No, sir.

50861. Mr. SUTHERLAND.—There was no process rved on you at all?—Well, there was at one time.

50862. But at this time?—About a year after.

50863. Mr. KAVANAGH.—It was not acted on?—o, sir; we paid.

50864. Mr. BRYCE.—The landlord eventually took f that increase of rent?—Yes.

50865. And now you are on the 1883 rent of £8?—es, sir.

50866. You are now practically on first-term rent?—Yes, sir.

50867. Sir FRANCIS MOWATT.—What do you now ant to submit to the Commission?—Well, all the nd surrounding this little estate is purchased out by te Congested Districts Board.

50868. Every part of the estate round this?—Yes, a circle, by the Congested Districts Board, and e valuation of this little estate is very small, and ere are very poor holdings there, owing to the fact at this landlord of this estate is not willing to sell a reasonable price. The tenants will not get any largement of their holdings in that district, and ere are migrants brought in on the district, while ese poor people on the surroundings have no inease to get.

50869. Sir JOHN COLOMB.—On this particular tate did you make an offer to the landlord to buy?—Yes, sir.

50870. What was the offer?—We wanted to leave e price at whatever price the Congested Districts oard were prepared to pay. We were willing to ide by it.

50871. You asked the landlord to sell to the Conested Districts Board?—Yes, sir.

50872. What was the answer of the landlord to at?—The landlord said that he would, provided e Congested Districts Board would satisfy him in e price.

50873. Do you know if there was any communicaon between him and the Congested Districts Board that point?—Yes.

50874. How do you know?—Well, I inquired.

50875. Of the Congested Districts Board?—Yes; d Mr. O'Kelly inquired also.

50876. Did you hear from the Congested Districts oard what the terms were that he offered?—No, not actly.

50877. Did you hear from anybody in the Conested Districts Board that his offer was too high?—ot an official of the Board.

50878. You heard that?—I did, sir.

50879. Sir FRANCIS MOWATT.—How long ago is it nce you were told that?—About a couple of months go.

50880. Mr. O'KELLY.—It was mere general ru-our, but I do not think it accurately describes the ct?—Oh, it was not.

50881. Sir JOHN COLOMB.—And your complaint is at here your congested small estate in the middle an area that the Congested Districts Board had urchased is in need of relief, and you are excluded from that relief because of the difference between the Congested Districts Board and the landlord as to price. Is that it?—Yes.

50882. Mr. O'KELLY.—Now, Mr. Glynn, Begley's property is adjacent to the other property that the Congested Districts Board have bought?—Yes.

50883. That is to say, it is adjacent to the Roche lands?—Yes.

50884. Lands that have been distributed amongst tenants of a neighbouring property?—Yes.

50885. The tenants on the Begley property are exactly in the same position, from the point of view of congestion, as Roche's tenants were?—That is so.

50886. Now, adjoining the Begley property there is a property known as the Castlegar property, which was purchased by the Congested Districts Board, and the greater portion of which is grass?—Yes.

50887. Now you thought it only reasonable that, seeing that all the other grazing land close to the Begley property was being utilized for other tenants who were fortunate enough to come under the administration of the Board—seeing that, you thought it was only natural that the Castlegar grass lands, being the only grass lands left in the district, should be distributed amongst the Begley tenants?—Yes.

50888. And in case that migrants were brought in from a distance on the Castlegar property all hope of any improvement in the condition of the tenants on the Begley property would be cut off?—It would.

50889. Very well. The Congested Districts Board approached Mr. Begley, did they not?—Yes.

50890. And I understand that Mr. Begley was perfectly willing to sell?—Yes, on getting what would please him.

50891. I do not know that it was a question of price. I understand that the Congested Districts Board proposed to migrate tenants from a distance to this property?—Yes, sir.

50892. And thereby shut out the Begley people?—Yes, sir.

50893. I understand that Mr. Begley expressed his willingness to sell?—Yes.

50894. I understand that some trouble occurred on the property when workmen of the Congested Districts Board went on the Castlegar land for the purpose of dividing it up amongst the migrants?—Yes; there did.

50895. I understand some trouble occurred?—Yes, there did.

50896. The people, resenting the distribution of these lands amongst the migrants, got into trouble with the people who were working for the Congested Districts Board?—Yes; they hunted the workmen and gangers away out of it.

50897. And, as a result of that, a communication was sent to the tenants by the Congested Districts Board, that they would have nothing whatever further to do with the property on account of this incident having occurred?—Well, they said so, anyway.

50898. You have heard, I dare say, a great deal about the independence of the Congested Districts Board, that they are independent of the Castle, and all that kind of thing. This was said in the course of evidence before this Commission?—Well, of course I do not know much about that.

50899. But would not an incident of the kind to which I have made reference suggest that, although the Congested Districts Board may not be responsible to the Castle they are responsive to it?—I believe so.

50900. In this particular instance is not that the fact?—Well, of course I am not sure about that.

50901. I only put that point because you know, as I do, that we had great difficulty in allaying the indignation that was felt by the people in the country?—Oh, that is so; great difficulty.

50902. Sir JOHN COLOMB.—You speak of migrants, and it has been elicited that there was a feeling of soreness there at this grass-land contiguous to your land being given to migrants?—Yes.

50903. Where did the migrants come from?—From other parishes; and the people on the Begley Estate, adjoining this farm, on which they had the grass of a cow for years on this estate that was lately purchased by the Congested Districts Board, thought it a great hardship to have migrants coming in there and taking this grass of a cow away from them, because their holdings are very small, and some of them only hold two or three acres of bog, and could not rear a cow.

50904. Then this was because the small holders on

Aug. 31, 1907.

Mr. James Glynn.

the Begley Estate, while this grass land was unoccupied, were able to get the grazing of their cattle?—Yes.

50905. And that was a great assistance to those small holders?—It was a great help to them.

50906. And what you complain of is that, this grass land having been taken away and part of it appropriated to strangers from another parish, it was not merely sentiment that led to this trouble, but it was the fact that that deprived the small tenants on your estate of accommodation in the way of grazing that enabled them to live on their farms?—Yes, by handing it over to strangers; but they have not done so. The tenants on the Begley Estate protested against this, and they gave them time, in hopes of being able to negotiate with Mr. Begley for purchase.

50907. Is part of that grass land still unappropriated?—It is in the hands of the Congested Districts Board still.

50908. But the Congested Districts Board does not allow the smaller tenants to get grazing there?—Yes, they do presently.

50909. For the present?—Yes.

50910. And therefore you are afraid of what may happen in the future?—Yes; we are afraid that they will hand it over to strangers.

50911. It is a mere theory in your mind as to what may happen, not what has actually happened?—That is so.

50912. Sir Francis Mowatt.—Have there been, as a matter of fact, any migrants at all—have they introduced any migrants?—They have.

50913. How many?—They introduced three or four. They have these on this farm. If they agreed to their terms I suppose they would have taken the letting, but these Begley tenants seeing this party inspecting these new holdings that were laid out on this grass farm, went there and put some of them into the river, so that they got afraid that they would not allow them into it at all; and, later on, they went and hunted the ganger that was operating and working on this farm, and they hunted them away out of it altogether; and there was some blood and some hard work in it.

50914. And are the migrants still in the river?—No, sir; they did not come there since.

50915. There are no migrants now?—Oh, there are none as yet, except one that was on the adjoining estate.

50916. Mr. Sutherland.—What was that for? Was it to show your displeasure with the Congested Districts Board for not acquiring the estate you are on?—No, we agreed to leave the price to the Congested Districts Board.

50917. But they have not purchased your estate?—They have not purchased my estate.

50918. Because the landlord would only give it at his own price—is not that so?—That is what I understand.

50919. And are you in favour of the Congested Districts Board paying this price?—We agreed to leave the price to the Congested Districts Board.

50920. But what are you in favour of?—I would be in favour of the Congested Districts Board buying it at a reasonable price.

50921. But are you in favour of the Congested Districts Board buying it at the price the landlord asks for it?—Well, I do not know the price the landlord wants.

50922. But still you want them to buy?—Yes.

50923. Do you understand that if they pay a certain price for it that price will be transferred to you?—I do, sir.

50924. So you are putting pressure on your own side to give a big price for it?—Yes.

50925. Mr. O'Kelly.—Just for a moment. You are so anxious that the price between you and the landlord should be equitable and fair that you are willing to leave the decision of that price to a body such as the Congested Districts Board?—Yes.

50926. You would not be in favour of the Congested Districts Board paying a price for that property that might put a payment in the shape of an annuity on you that you would not be able to meet?—Oh, I would not, of course.

50927. And to that extent you modify the answer you gave to Mr. Sutherland; you will correct the answer?—Oh, certainly.

50928. Suppose this Castlegar property about which we have been speaking was handed over to migrants, would not the estate on which you live be congested for all time, all the grass land in the district having been already disposed of?—Yes; it is all distributed except this small farm.

50929. And then the only hope of your ever having economic holdings would be when you were yourselves migrated in turn to some other property?—That is so.

50930. Sir John Colomb.—Just to be quite clear, because my mind is confused about this, you wish the landlord to sell to the Congested Districts Board?—Yes, sir.

50931. As I understand, the landlord and the Congested Districts Board entered into negotiations?—That is so.

50932. And while the negotiations were in progress the tenants took fright and acted in this way—is that so—during the negotiations?—Well, no, not exactly.

50933. Had the Congested Districts Board refused to buy from the landlord, and then the negotiations having been broken off, did the tenants take this premature action?—They had agreed to leave the purchase of their holdings on this estate to the Congested Districts Board. They saw then that if the Congested Districts Board handed this farm over to migrants they had no increase of land to get anywhere within a few miles, and they were so poor and so small that they could not migrate to those places.

50934. But what I want to get clearly from you is this. According to your view, when the tenants took that action, were the negotiations between the landlord and the Congested Districts Board still going on, or was the matter closed, and did the tenants know that the Congested Districts Board had refused to buy that property?—The negotiations were going on at the time, I believe.

50935. And therefore it was not because they could not agree about the price so much as because of the premature action that the negotiations were broken off?—The Board said they would not touch the Begley Estate on account of the action of the tenant.

50936. Most Rev. Dr. O'Donnell.—I want to ask you a few questions on this subject. At what date did the Congested Districts Board buy this grass land?—About two years ago.

50937. At what date did you and the other tenants on the Begley Estate move in the direction of purchase?—About five years ago. There were other grass farms adjoining this estate—the Clonford Estate, the Blacker Estate, and the Bourke Estate. There were two other grass farms surrounding this little property, and when we saw that the Congested Districts Board purchased those two places we approached the landlord and we explained to him our views and the great advantage it would be to us to come under the Board, as long as they had this land; that we would get an increase of land and be improved in every way; and we would be willing to pay a good price for the sale.

50938. And what was the answer?—He said he would not sell at the time.

50939. Then you came on again. When did you come on last to ask the landlord to sell?—Well, on several occasions for the last twelve months. For the last five years repeatedly.

50940. And finally he agreed to negotiate with the Congested Districts Board?—He did of late within the last six months.

50941. Within the last six months he agreed to negotiate?—Yes.

50942. And it was for the benefit of the small holders that the Congested Districts Board bought the grass land?—Yes.

50943. If the Congested Districts Board had been fortunate enough to have acquired the Begley Estate do you not think that the Begley men would have received the first enlargement?—Oh, certainly.

50944. You are pretty sure about that?—Yes.

50945. You have no doubt about that?—No doubt.

50946. That the Board would have enlarged those on the neighbouring estate first?—Yes; oh, certainly.

50947. The only reason that it was inclined to bring in people from a distance was that it was not in a position to enlarge your holdings?—Yes, that is so.

50948. It did not acquire the Begley property and could not therefore enlarge holdings upon it?—Yes.

50949. That was the reason?—Yes.

50950. But it was a hardship to you?—Yes.

50951. You looked to enlargement all the time?—Yes.

50952. Did they distribute all the grass lands?—No. There were tenants on the estates and they distributed them amongst the tenants as far as was required, and then tenants from other districts.

50953. And if the tenants did not get an enlargement of their holdings when they did purchase the only chance of enlargement was to go to a distance?—Yes.

50954. Whether it was a far or near distance still these people would have to go to a distance?—Yes.

50955. That was so?—Yes.

50956. The action that was forced on the Board by the circumstances did not render it impossible altogether to provide enlarged holdings for you, but it made it much more difficult?—It made it more difficult.

50957. It could only be at a distance—that is the point. Now, the Board got into negotiations with Mr. Begley—Is not that so?—Yes.

50958. And at that stage some migrants were coming in?—Yes.

50959. And you did not like to see them coming in when you wanted enlargements there?—Yes.

50960. And then there was a good deal of trouble?—There was a good deal of trouble.

50961. And the Board wrote that owing to this trouble it could not proceed with the negotiations. That is the way this was put to you?—We gathered it, but we do not know.

50962. That has been put to you and you have assented to it, I think?—Well, I believe so.

50963. You may take it that that is so. It has been put to you that that was a question of independence. Do you not think that it is exceedingly difficult for any Board to carry on negotiations with owners if that class of trouble is going on on the borders about its grass land?—Well, I believe that the Board could hold the land for a length of time in their hands till the adjoining tenants would be purchased out; because if the Board distributes this grass land, for instance, in my district the tenants on this estate—the Begley Estate—will have to go far to get an enlargement, they will have to go perhaps seven or eight miles, while they would have enough at their door if they got it.

50964. I quite agree with that, but on the point of price do you not think it was likely that the Congested Districts Board could make a better bargain with Mr. Begley if there was no such trouble as this on the border than if that trouble existed, and he could say to them that they had better buy from him in any case, because these people were bent on getting their grass land?—I suppose he would expect to get more for his land.

50965. You have not lost hope that the Board will buy the property and provide those enlargements?—We have hopes that they will.

50966. Whilst anyone could appreciate your position, do you not think that it is difficult for a Board to negotiate these bargains in such a way as to give satisfaction all round?—I do believe it.

50967. It is anxious to provide for those men at a distance?—Yes.

50968. And it had not this Begley property on its hands?—Yes.

50969. And it wanted to go on with some work, and then, at your instance, it began negotiations with Mr. Begley, and the complications on the border made the negotiations difficult; and perhaps now that the complications have quieted down it may be more easy to carry on the negotiations?—I believe so.

50970. Mr. O'Kelly.—Arising out of the answer which you gave to his lordship the Bishop, you, in common with all of us, regret to see any trouble on the property?—Oh, certainly, I would.

50971. Might I suggest to you that this is a particular class of property where without trouble you would have no negotiations at all?—Yes.

50972. Mr. Begley has refused on several occasions to sell?—He has. He always refused to sell.

50973. And if the tenants did not play a militant part, if I may put it in that way, Mr. Begley would be as reluctant to sell now as he was two or three years ago?—Just the same.

50974. Now, in regard to this trouble that occurred, which, according to his lordship, accounts for the fact that the negotiations were broken off, might I suggest this to you. The tenants went to the Congested Districts Board, or the tenants wrote?—Yes.

50975. They got a promise from Mr. Doran, the Chief Inspector of the Congested Districts Board, that no breaking up of the Castlegar farm would take place until Mr. Begley had been approached, and an arrangement arrived at?—That is so.

50976. Was that promise carried out?— Well, the time was limited to six months.

50977. Six months; but before the six months had expired, though the tenants had been quiet during that time, an official, or representative of, the Congested Districts Board went on the property?—I am not quite certain whether the six months had expired.

50978. In order to have it divided?—That is so.

50979. And it was because the tenants felt that faith had been broken that they, rightly or wrongly, became indignant, and, their indignation increasing, took the form of the trouble that occurred afterwards on the estate?—That is so.

50980. And if faith had been kept with the tenants no trouble of the kind would have taken place?—No trouble of any kind.

Most Rev. Dr. O'Donnell.—This question of faith is important. What was the faith broken?

Mr. O'Kelly.—The promise of Mr. Doran to myself.

50981. Most Rev. Dr. O'Donnell.—What was the faith pledged?—It was pledged in this way, that they would hold these lands on their hands for six months in hopes to make an arrangement with Mr. Begley for the sale of his property, in hopes that they would be able to enlarge and improve the tenants.

50982. Did they keep that more than six months?—Not till this trouble.

50983. Did not they keep it more than six months?—They did.

50984. Mr. O'Kelly.—Had the six months expired before this trouble took place?—Yes, before the trouble took place, but before this there did tenant purchasers come to see the place.

50985. Before the six months had expired?—Yes, and that was what was the cause of the trouble.

50986. Sir Francis Mowatt.—I rather understand, from the answer you have just given now, that unless this compulsory path had taken place the owner would not have been willing to sell at all?—I believe so.

50987. But had not he, as a matter of fact, offered to sell before this took place?—No.

50988. Then when this trouble began the owner had never offered to sell to the Congested Districts Board at all?—No; till about six or nine months ago.

50989. Most Rev. Dr. O'Donnell.—There must have been two troubles. The pressure to induce him to sell was No. 1. The other was this difficulty with the migrants. Did he agree to sell before this difficulty arose with the migrants?—He did; but the tenants thought it was no benefit whatever for him to sell if their land was cut away; that they had no improvement or increase to get.

Mr. Maurice Hennelly examined.

50990. Sir Francis Mowatt.—Are you a farmer?—Yes, a small farmer, under £10 valuation.

50991. Where do you live?—At Scardane, Seafin.

50992. How many acres have you?—About 18 statute.

50993. What is the valuation?—£8 10s.

50994. And the rent?—About £9; within a few shillings of £9, the year's rent.

50995. Now tell us what you have got to say to the Commission?—Well, just only to state the grievances of the locality or the district or townland that I am in. They have only bits of reclaimed land. The best part of their land is taken away, 150 acres, in the very townland I am in.

50996. Taken away by whom?—By the landlord, and handed over to graziers.

50997. When was this done?—It was one about forty years ago, or maybe more. I believe it was the

Aug. 31, 1907.

Mr. Maurice Hennelly.

fashion of the day at the time that if a tenant failed on the property it was woe to the rest. Some of them failed to pay; only a few paid; and I can relate one incident belonging to my own family. My uncle had a good holding in it, and he would not give it up at any cost till all the rest was laid out, I may say, in farms, or already prepared for it; and when the landlord, or the agent at least, saw that he would not give up the land they conspired against him, and they procured all the carts they could get for love or money around, and took away his demesne wall, and it was laid on the roadside to make a defending wall for this farm, and it is there from that day to this. And it is in the hands of graziers, and even let in the county of Galway, and sub-let to a shopkeeper in this town. We approached the landlord and asked him to sell, on condition that he would sell to the Commissioners.

50998. That is Major Vesey?—Major Vesey.

50999. And you approached him to sell, and as a result he refused?—He did not refuse, but he said he would sell if we bought from himself.

51000. You asked the landlord to let you buy the holdings?—Yes.

51001. When was the last time?—Last November.

51002. And what did he say?—Well, Father M'Hugh, the Parish Priest that we have, wrote in our behalf, and the answer that he made was that he did not see his way to sell, and later on he told myself, within my own house. He, naturally enough, comes every year to see how we stand, and he told me he would be inclined to sell, but to give him his own preference or so many years' purchase as he wanted for it, and I told him that we could not do that, but that we would meet him half way at all events if it was possible at all to deal, and that we never intended to buy but through the Congested Districts Board or the Commissioners, and that if he did not give us the grass land we meant to stop where we were, and the tenants would go into court every time the fifteen years would be up. That is how it occurred.

51003. The estate has not been sold to the Congested Districts Board or to the Estates Commissioners?—No.

51004. Did either of those bodies approach the landlord with a view to buying that estate?—Yes, sir.

51005. And do you know what was his answer—that he refused?—Yes, unless he would get us to buy direct from himself.

51006. He wants the tenants to buy direct from him?—Yes.

51007. And what you want is that the estate should be bought and divided by the Estates Commission amongst you?—Yes, exactly so.

51008. And, if he will not sell, what you want is that the Commissioners should have power to make him sell?—Yes.

51009. At a reasonable price?—Well, yes at a reasonable price.

51010. That is your grievance?—That is our grievance, sir.

51011. I don't want to put any more questions then. You have told your story quite plainly?—I think so. It is easy to speak the truth.

51012. What price did he ask?—I think he asked twenty-five years' purchase. He has some other properties up in the County Galway, and to give you an idea of the price we said we would give him as far as we could, or perhaps two years more, if he gave us the grass land that was taken from us and our fathers.

51013. Two years more—that would be twenty-seven?—No; we did not say we would give him twenty-five at all. We proffered him twenty years' purchase.

51014. And then you would give him two years more if he would divide the grass land?—No, I did not say that. I would give him twenty-one at that time; but I believe there is no way of hammering it out at all unless it was compulsory on all estates.

51015. And did the landlord say why he wanted to sell to you and not to the Congested Districts Board?—He did, sir.

51016. What was the reason?—Well, I could not exactly tell what was the reason, but I say that his mind was that he would sell us the bones and keep the fat himself; but we would not be humbugged, and would not buy at all without getting the grass land, and I think yourselves are of the same opinion.

51017. Most Rev. Dr. O'Donnell.—Where is this grass land?—All the arable land laid down in grass land sixty years ago, is on the other side of the road, and the rest is cut-away bog and reclaimed land, and that road makes the boundary for the farm, and the tenants and the houses are still there, except a few that went away and that were not able to stand at all.

51018. Mr. Bryce.—But this grass land was at one time under tillage?—Yes.

51019. It had all been reclaimed from the bog, had it?—No, no, there might be a bit of it; but it was arable land, the most part of it. All they have in possession now is, I may say, reclaimed land, and it was done at their own expense, and he never expended one shilling on it.

51020. What you say he did was, he turned the tenants out of the good arable land, and left only those who were on reclaimed land?—Exactly.

51021. And did he evict the tenants off this arable land to make the grass land?—No, but he threatened them that they would have to give up the arable land when there was a failure or two, as I told you before, that he would evict them. So they had to sing Tom Moore's song over it, that they'd mourn the hopes that left them.

51022. This was soon after the Famine?—Yes, exactly; it was after the Famine.

51023. Most Rev. Dr. O'Donnell.—The arable land was taken?—It was taken away.

51024. You have been a hard-working man yourself?—Yes, sir.

51025. If you got a few acres of that arable land back it would greatly improve your condition?—I can prove that I am a hard-working man, because I am recommended by the Agricultural Department to get a prize every time I go for it, and I can make as much out of an acre of land as any man in Mayo. I am second to none, as far as agriculture is concerned in this union.

51026. If you and your neighbours each got four or five acres of this arable land near your present holdings, without any change in your dwellings?—Well, it would, sir; but if we were sent over to Roscommon, and got fifty acres in it, we would be better pleased.

51027. Sir John Colomb.—What do you consider the value per acre of the arable land and the value per acre of the reclaimed land that you have got in your own possession now?—Well, there is some of it nearly as good. I must not tell a lie.

51028. What do you value an acre of that grass land at, and what do you value an acre of your own at?—Well, of course, I think it was value enough, 10*s.* an acre on it.

51029. On the grass land?—Yes. That is, in order to make ends meet. Of course a farmer can pay a good deal more, according to fairs, according as they go up and down; but it is not easy to a poor man with only a few acres.

51030. Am I right in understanding that what you say is that a few acres of grass land would be of great benefit to you, and you would be quite prepared to pay an annuity representing a value of 10*s.* an acre?—I would, for I would be anxious to get rid of the landlord in one sense, and to deal with the Board; and in the next place it would be of advantage to me to rear my family. Though I have my family reared, and I am not going to rear any more, someone else will come after us.

51031. Mr. Bryce.—You said the rent of this farm of yours is £9?—Yes.

51032. Is that first or second term?—Second term. We went into court on the first term, and on the second term we agreed, ourselves and the agent, for 3*s.* in the pound. It was before that this way:—If the grass land went 50*s.* an acre for it, the next thing we could hear was we must get a rise on this land; even the land we reclaimed we must rise it—very convenient to the grass land—or else walk away. There were no backdoors about it.

Mr. ANTHONY DAVIS examined.

Aug. 31, 1907.

Mr. Anthony Davis.

51033. Sir FRANCIS MOWATT.—Are you a farmer? s.

51034. How many acres?—Ninety.

51035. Valuation?—£28 5*s.*

51036. Rent?—£34 17*s.*

51037. Where is it?—Rathduff, Ballina.

51038. On whose estate?—Portion of it on H. ry, Knox-Gore's, and portion on Mr. Jackson's. I resent thirty-six townlands, on which there are . holdings under £4 valuation; 198 under £10, majority of which are under £7 10*s.*, and 52 over 0, and 43 of these are under £17, and only nine r £20. In this district there are three large zing farms, comprising 336 acres 2 roods 11 ches, and another small one of 18 acres that was tenanted, and another about 40 acres; and if se tracts had been broken up the congestion would stopped in this division.

51039. You propose that those grass lands should purchased by the Congested Districts Board?— s, or by the Estates Commissioners. And to show w these people exist here I have made out a kind table from some townlands, taking out two town- ds in particular. In one the area is 135 acres 1 d 30 perches. The bog land there, or marsh— l land—is 35 acres. The valuation is £132 2*s.* e population of the townland is seventy-two, and fourteen years twenty-eight people have emi ted. From America there has been last year 11 sent in; from England, £92, and earned at ne, £10. This money that is sent in by the mem- s of their families is what is keeping them exist- from year to year on most of the very small hold- s. The people are very industrious, and if those zing ranches were broken up into reasonable hold- s for them they could have made a better progress, l they would not be taking away their children, sending them away, and actually keeping them ed out, and sending them to other countries in orance without any education. If they had rea- able holdings and some of this money coming in y would have educated their children and greatly roved their position. On the very district near- this there are two very large grazing tracts, one Lisderagh, 197a. 3r. 19p., £125 valuation; and on other side, portion of this district, Crannagh, a. 1r. 26p., used till very recently for grazing pur- es, and the grazing land now being fallow owing the farm deteriorating, and the labour, of course, been lost by this, by the tenants. Now it is com- back to its old form, the landlord thought it was er to set up a kind of bogus interest, and divide nto different holdings, and he puts a rent of 24*s.* 28*s.* per acre on.

1040. Sir JOHN COLOMB.—When was this?—Last r.

1041. Most Rev. Dr. O'DONNELL.—But it has not n carried out?—No; the people rebelled against it he ground that it was most unreasonable, consider- that the land on the other large holdings at both s is set at a judicial rent of 12*s.* to 14*s.* per acre. l he requires that there should be in the first in- ace ten years' purchase paid; and, if looking out- the mearing the rent of lands equally as good, much better condition, indeed, to judicial tenants ld be only 12*s.* to 14*s.*, whilst here it was going be from £1 4*s.* 0*d.* to £1 8*s.* 0*d.*, the ten years' chase for the bogus tenancy would be actually al to twenty-four or twenty-five. It would be e—a great deal more—because in the case of a ling of land sold by a tenant at twenty years' pur- se you must consider that the house and offices t with his own labour there might be valued for 0, and if the land, plus those houses, brings nty years' purchase, I think it would be only fair deduct from the price the value set on the house offices.

1042. Most Rev. Dr. O'DONNELL.—I think when calculate the number of years' purchase that ld be equitable you have always to calculate that the basis of a fair rent?—Yes, my lord; I would to do it. Then, again, I consider it a great in- ice to the ratepayers, who have been a kind of rantee for these annuities, that perhaps the Es- s Commissioners or somebody else might come in give twenty years' rent for this, and purchase it n, and acquire it. It would not be twenty years' at this price, but it would mean nearer to forty, my lord, according to the judicial rent on the town- lands at both sides, in my opinion.

51043. Sir JOHN COLOMB.—Have you got any other business besides farming?—Yes.

51044. What—you are a merchant, a shopkeeper?—Yes, I keep a shop.

51045. Have you got a spirit licence?—No.

51046. Now you have got ninety acres of land?—Yes.

51047. Did you buy that or inherit it?—Inherited it. It is in my family for over 200 years.

51048. How much tillage have you got on that land?—Twenty Irish acres.

51049. Twenty acres of tillage?—Yes.

51050. How many labourers do you constantly employ?—Two; and occasionally I have fifty at a time.

51051. Sir FRANCIS MOWATT.—What?—Yes; I have often fifty men on a harvest day.

51052. Sir JOHN COLOMB.—Are you a judicial tenant?—Yes.

51053. Do you think mixed farming pays you better than grazing?—Yes, I do. For instance, I graze. I was once a grazier.

51054. And that is your opinion?—I find that mixed farming pays.

51055. And that the land improves by it?—Yes, you are always strengthening your land.

51056. And you think, from your experience, that, taking ninety acres of land, keeping twenty acres of it in tillage improves the land and gives you a better return than if you had the whole in grass?—Certainly, I do.

51057. Mr. BRYCE.—You were talking now about the deterioration of the grass land in your district. Do you think that is, so far as your observation goes, a general deterioration in the grass lands all over the country?—Of course there are certain lands that may deteriorate if they are brought from a certain state and improved; but where the land has naturally a better body and soil it will not deteriorate so quickly.

51058. Do you expect that, as compared with the past ten years, the ten years coming will produce as good grazing land as the past?—I will not say that.

51059. But, suppose the price of cattle remains the same, do you think this deterioration which is going on will affect the rent for grazing land in the future?—Certainly, I do think it.

51060. And therefore purchasing at the present level of prices would not be safe for the State?—I have quoted the fact that in Cranagh land had been deteriorating and the inflated value going down.

51061. And it would therefore be no longer possible for the landlord to get the same rent for it?—Impossible.

51062. Therefore, as a result of that, do you think it would be safe for the State to pay the prices which it would have to give for this grazing land upon the basis of the past ten years?—No; because I think that the State should first see how those grazing lands were created, for there have been grazing ranches created by the wholesale eviction of the tenants, and not for non-payment of rent, because those two townlands were, as I might put it, the kidney of the whole district, the very best land, and the district was so situated that there were bog patches of 10, 15, and 20 acres, and the landlord was letting these at £4 and £5 an acre for the people to cut the turf off, and when the turf was cut off he evicted those fifteen tenants wholesale and placed them in here at a very low rent, and as they were then reclaiming he raised the rent. In one case—and I have gone to great trouble over it—he raised the rent from £3 to £6 10*s.* and it has now been reduced again by the Land Commission to £3 10*s.*

51063. Sir FRANCIS MOWATT.—You are talking of tenanted land?—Well, these 90 acres in one case, and 129 acres in another. Those two were created in this fashion, and I would say that is an inflated value of it presently, as grazing should not be the basis for the rent that should be paid now or compensation to the landlord. For instance, he captured and seized the whole industry of those fifteen unfortunate tenants and drove them out without compensation into the bog patches. Then the next thing which was an injustice, I consider and which the State should also consider in

Aug 31, 1907.

Mr. Anthony Davis.

taking over the lands, a great injustice to the ratepayers of the district was this, that he pulled down those fifteen houses that were valued, some of them, at 28*s*., and thereby he brought down the taxation on those farms so much more. That inflated his net income and I call that inflation a ground that the price or compensation that should be paid to him now should not be based on, and that it should not be based on the improvements that were made under the rent that was paid under the old-rack rent system by those fifteen tenants.

51064. Sir JOHN COLOMB.—May I ask you this. This farm of 90 acres has been in your family for a great number of years?—Yes, for about 200; over 150 at least.

51065. Have you got any record—was it always one block of 90 acres?—Oh, yes, it was always, and much more too, because the farm was divided between two sons. This portion that I hold was always one block. Though held under two landlords it is one block.

Mr. BRYCE.—I would ask you, if possible, to hand in these things—this statement which you have made with regard to these particulars.

51067. Sir JOHN COLOMB.—As a matter of fact, from your knowledge, have people to pay less for grazing now than they used to have?—Is it for grazing ranches?

51068. Can you get grazing cheaper now on those lands than you used to?—Yes, in some cases, as I stated, where a farm is going back. Where there is the townland I have quoted of good natural soil that has not deteriorated or gone back, that has kept its price.

51069. Therefore I suppose that you do not wish to lay down the general proposition that in all cases the land is deteriorating?—No, I do not.

51070. All you wish the Commission to understand is that certain grazing land will deteriorate unless it is properly worked on mixed farming?—The majority of it.

51071. But you do not wish the Commission to understand that the lands are deteriorating?—No, the majority of them.

51072. In reference to your answer to Mr. Bryce, you do not wish the Commission to understand that your opinion is that that applies to good grazing land?—I do, after a certain time. After a certain number of years I believe any land will, because I have had in my own possession the very best that I am anxious to get broken up presently because I consider it is going back. And, again, I believe I read or heard a suggestion made by Colonel Knox Gore that good grazing land should not be touched, and that it was better for grazing purposes. Well, in my opinion, from my experience as a farmer, I say that that cannot be correct. No man of practical knowledge could agree with it, for the very reason that, taking the potato crop, it is failing every other year, and I think the farmers should be induced to sow a wheat crop, and a wheat crop in my experience requires a soil of a natural body as well as a manure and sub-soiling. Because if you put it on a light soil or a bad soil that has been brought up by the strength of manuring that soil it will lodge and it will not root firmly, and you will not have a proper return of a yield of grain, whereas if you put it in a good soil with a good body, such as those grazing ranches that I have mentioned, it is sure not to fail, or almost sure, and the yield will be actually double. That is my experience.

51073. Most Rev. Dr. O'DONNELL.—What is the rotation that you observe in your twenty acres of tillage?—The longest I keep a crop is six years. I lay it down the sixth year with artificial grass.

51074. In grass?—Yes. It is then according to how the field suits me for grazing purposes.

51075. And do you stall-feed at all?—I do.

51076. How many each year?—Seventeen or eighteen is the highest. But I have two sets. I send off my first cattle and dispose of them, and buy half-feds or quarter-feds.

51077. And do you use your own root crops to feed them?—I do not buy any cake—not a bit.

51078. Now, do you consider the mixed farming that you pursue on your farm much more profitable to you than grazing the whole farm?—Oh, entirely more profitable, and better for the rearing of young stock. Again, another thing I would like to mention. The people cannot keep their cattle. They must dispose of them at four months' old and give the buyer an opportunity of making money because they have not the space. Often for grazing they would have to pay 7*s*. a month on a good farm in this neighbourhood till lately, and now I remark that this year they are getting it for 4*s*. or 5*s*.

51079. You are speaking now of those in your own locality?—I am. I keep them till I finish them and put them on the market at two or two and a half years' old at their price.

51080. Mr. BRYCE.—You stall feed them?—Yes. I put them on the Dublin market if I do not satisfy myself at home.

51081. So that the keeping of those twenty acres in tillage does not in the least interfere with your cattle business?—No, it improves it. It pays me not to hand them away, but to hold them and fatten them and get the last penny for them. I put them on the market at two and two and a half years' old, from twenty-three to thirty months old. Mr. Ganly, the auctioneer, sold the stock for £16 15*s*. last January.

51082. Most Rev. Dr. O'DONNELL.—I think you said that that arable land was taken from the tenants without compensation?—Yes, my lord.

51083. Were they in arrears?—No, my lord, no arrears.

51084. Do you consider that in purchase by the State for migration purposes the owner could scarcely claim to be paid for the tenant right?—I say that the improvements of the tenants are seized on and that it would not be now fair to give him the inflated value of the grass farm.

51085. You think that this dual interest should not be recognised in these grass lands, that the owner should be only paid on the landlord's interest?—I would give him just what his net income was when he had his tenants there. He put them out without compensation, and they owed him no rent.

51086. And what about the enjoyment of it for so many years?—That is an interest, I think. I would not compensate him for an interest.

51087. Sir JOHN COLOMB.—I understood you to say in answer to a question that one of your rotation crops was artificial grass?—That is when I am laying down.

51088. Are not you much in advance of the ordinary farmers?—I will not agree with you, sir, that I am in advance of the farmers of my district. They are very intelligent and most industrious in my district, but unfortunately they have not the land.

51089. Now one of the things I have been most struck with in travelling in this country is this, that, although I have seen oats and roots, and potatoes and wheat, often I have hardly ever seen a rotation crop of artificial grass, and, therefore, are not you in the exception in the rotation system of using artificial grass?—Not in my district.

51090. Which district?—I come from the Carronmore district, within five miles of Ballina.

51091. Do the tenants in that district use artificial grass much?—Oh, they do.

51092. Then I would be glad to see that district?—When you will, I will show it to you.

51093. There are certain cases, are there not, where the landlords have themselves improved?—Not in my district, that is not in those grazing ranches.

51094. But where a landlord can prove that the grass lands are improved by himself or his predecessor, would not that modify your opinion with regard to the point the Bishop put to you?—Undoubtedly, it would; anywhere that he can show that he laid out money on improving it. I even go the length of saying that it would not be justice to put him out without compensating him for it.

51095. Then your view is this, that where it is proved that the origin of the grass lands was entirely due to the improvements of tenants, it is in that case that you take it into consideration in fixing the price?—Yes.

51096. Where the landlord or his predecessors spent large sums in improving the land, then you would modify your opinion with regard to it?—Oh, certainly.

51097. Mr. BRYCE.—You said in reply to his lordship the Bishop that you did better with your cattle for having those twenty Irish acres of tillage?—Certainly.

51098. Do you think, then, that if the grass lands were utilised for tillage, the country would bear a larger head of cattle than it does at present?—A much larger head, and would profit much more by it.

Mr. MARTIN MULKEEN examined. *Aug.* 31, 1907

Mr Martin Mulkeen.

51099. Sir FRANCIS MOWATT.—Where do you re- e?—At Greenwood, Bekan, near Ballyhaunis. I ne from the Knox Estate. I am a farmer. I ve up an old holding. I have fourteen acres oods, and my valuation is £7 10*s.*, and my annuity £5 17*s.* 6*d.*

51100. Did you buy from the Congested Districts ard?—Yes. In 1904 I gave up my old holding to Congested Districts Board and migrated into a holding on the same property, and they built a house for me, and I was to pay £50 with my consent for the new house, and I was to get the ne quality of land, and the same complement as I before. I was satisfied with that. But there four Irish acres of land flooded. For six months the year I cannot use it for grazing. From nuary to June I cannot put a beast on it, and they not drain it.

51101. Most Rev. Dr. O'DONNELL.—Is it possible remedy the drainage?—They lost a lot of money ining it.

51102. Is it difficult to drain it?—They lost a lot lding gullets, and raised my valuation £6 4*s.* on d and 10*s.* on the house. They spent a lot of ney on these gullets and pinning bridges to drain, and they rose my valuation to £7 10*s.* on the land £2 on the house.

51103. Sir JOHN COLOMB.—Is your point this, that entered into this agreement with the Board on assumption that the drainage would be efficient, that you would not be flooded?—Yes, that I ld travel my land in winter for spring water.

51104. Was that the reason that induced you to er into this arrangement?—Yes.

51105. Is your statement that the drainage is so imperfect that the land is flooded, whereas you contemplated that it never would be flooded?—Yes.

51106. Is the drainage work of the Board completed?—No. They stopped it as soon as we signed, and took their gangers away.

51107. What steps have you taken to bring it under the notice of the Congested Districts Board?—When I wrote them they sent me back word that my case was under consideration.

51108. When was that?—That was in the year 1904.

51109. What has happened since?—They never came near the place since.

51110. Sir FRANCIS MOWATT.—What you have really come to say is you think that the Congested Districts Board should proceed with the drainage so as to keep their promise to you and give you over your holding properly drained?—Yes. The holding I gave up had no water on it, and it was better drained than the holding they gave me, but I thought that they would do it.

51111. Most Rev. Dr. O'DONNELL.—Was there any promise?—There was.

51112. What kind of a promise?—The engineer told me that he would do it, and they lost about £70 or more by making two gullets and pinning a bridge to do it, and when we signed the agreements we believed them.

51113. Was the £70 for the benefit of your holding?—No. It was for the benefit of them who had the valley.

51114. Sir JOHN COLOMB.—How were two bridges going to drain your land?—It was getting the water away into the lake.

Sir FRANCIS MOWATT.—I am sure I may say that that matter will be looked into by the Board, and if they find that they can be of any assistance to you I am sure they will.

Mr. MICHAEL BROGAN examined.

Mr. Michael Brogan

51116. Sir FRANCIS MOWATT.—Where do you re- e?—At Weathersfort, Ballyglass. I am a farmer, have eighteen statute acres. My valuation is ut £10, and my rent £8. I am on the Clanmorris ate. I got an enlargement of my old holding and was compelled to give my enlargement to my ther, and so I did, and got no land since. That two and a half years ago.

51117. Mr. KAVANAGH.—This was done by the Estates Commissioners?—Yes.

51118. Most Rev. Dr. O'DONNELL.—You got an engement, and then had to give it to your brother. ve you got your old holding since?—Yes.

51119. You were expecting an enlargement of your ding?—Yes.

51120. And it was given to your brother?—Yes.

51121. Don't you think that the Estates Commissners cannot do everything in a day, and that it es some time to go on with the work?—I suppose but I think I am entitled to it.

51122. They have not distributed all the land yet?—ey have not.

51123. Mr. KAVANAGH.—Were you satisfied at time?—I was if they left me the land, but they pelled me to give the enlargement to my brother.

51124. Had you before that the one holding be- en yourself and your brother?—No. The brother s living with me.

51125. They gave you a bit of land and then made you give it up to the brother—is that so?—Yes.

51126. How long had you got it before you had to give it to the brother?—Only about six months.

51127. Sir JOHN COLOMB.—Is the brother living with you still?—He is. I suppose he will get a house built on the new land.

51128. Mr. KAVANAGH.—Are you on good terms with the brother?—Yes.

51129. What are you complaining of now?—I had a right to get an enlargement myself.

51130. I suppose he wants an enlargement, too?—I don't think so.

51131. Most Rev. Dr. O'DONNELL.—He has got a new farm?—Yes.

51132. He had nothing before?—No.

Sir FRANCIS MOWATT.—The evidence you have given will be brought to the notice of the Estates Commissioners, but we have no power over them. You say they have not yet allotted all the land. They may consider—I hope they will consider—that they may give you a bit of what is left.*

51134. Sir JOHN COLOMB.—Have any farmers' sons been given land on that estate?—Yes.

51135. And you were a tenant on the estate, and have been so for some time?—I was.

* With reference to the above evidence, Estates Commissioners state that they received several communications from John Brogan, brother referred to, requesting them to give him the parcel (the enlargement referred to) which had been allotted to Michael Brogan, stating that Michael Brogan was satisfied that this should be done. The Estates Commissioners consulted their Inspector who saw objection to John Brogan getting this parcel instead of his brother, and John Brogan was accordingly informed that if he had uired the interest of Michael Brogan he should forward for inspection the Deed of Assignment together with a certificate by some ependent person that he was in occupation of the holding in question. In reply thereto John Brogan forwarded the following:—

"January 8th, 1906.

"I agree to give my enlargement in Knockatotaun to my brother, John Brogan.

"Faithfully yours,

"MICHAEL BROGAN, Weatherfort, Ballyglass."

"Michael Brogan agrees to make over the holding of land lately acquired by him in the Clanmorris Estate, from the Estates Commissioners, to his brother, John Brogan. The name of the farm is Knockatotaun, near Bradoge.

"JOHN M'GREAL, P.P., Mayo Abbey.'

"January 7th, 1906."

the Commissioners accordingly approved of the transfer of the parcel from Michael Brogan to John Brogan, and same was vested in accordingly. The change was not made at the suggestion of the Commissioners but of the parties themselves.

Aug. 31, 1907.

Mr. Michael Brennan (junior) examined.

Mr. Michael Brennan (Jun.)

51136. Sir FRANCIS MOWATT.—Where do you reside?—At Weathersfort, Ballyglass.

51137. Are you a farmer?—Yes. I have got no land. I am living with my brother. The Estates Commissioners promised me a holding, and promised an increase to my brother; so he said he was satisfied to do without an increase himself by my getting a holding, so none of us got any land.

51138. Then you are not a farmer?—I am only living with my brother. I wanted a holding. My brother was entitled to an increase, and he said he would do without an increase by my getting a holding, and they declined to give me any land.

51139. What reason did they give for refusing when they had promised it?—I could not say. They were promising it every time they saw me, and they did not do it.

51140. Most Rev. Dr. O'DONNELL.—What is th valuation of your brother's holding?—About £16, bu the rent is £10.

51141. Sir JOHN COLOMB.—The farmers' sons on th Clanmorris Estate have got holdings?—Several them have.

51142. When did your father die?—About twen years ago.

51143. Sir FRANCIS MOWATT.—Had he a holdi then?—He had. He was a bailiff on the estate.

Sir FRANCIS MOWATT.—If the Estates Commi sioners have promised it to you, and have given reason for refusing it, and have land still left, I su pose they will probably give you a holding, but cannot make them. Their attention will be called your evidence. That is all we can do for you.

Mr. Michael Brennan (senior) examined.

Mr. Michael Brennan (Sen.)

51145. Sir FRANCIS MOWATT.—Are you a farmer?—Yes. I live at Weathersfort, Ballyhaunis. I have only between 6 and 7 acres. My valuation is £7 5*s.*, and my rent £5 12*s.*

51146. Is that an annuity?—We were brought into court at the time that the Clanmorris Estate was sold. We were raised by the court. They raised me to £6 10*s.* I got an enlargement of land. There was a man adjoining me, and he wanted a passage for water, and the passage was put through my enlargement, and I asked them to give me a little abatement on account of this passage, and they would not.

51147. Whom did you ask?—Mr. Stuart and Mr. Hogan were in Balla at the time, and I wanted a little reduction for this passage seven feet wide running through my enlargement. They would not do it; in my absence they handed over this passage.

51148. Mr. SUTHERLAND.—How much do you think would be the reduction for that passage?—It would only amount to four or five shillings.

51149. Of course you know that there is a legal right to water wherever it is?—I would not go against that. I only want a reduction for the passage.

51150. Sir JOHN COLOMB.—Have you got your vesting order yet?—No; I have not. It is two years now and I am out of my land since. I was brought into court, and it was raised, and I am without my enlargement yet.

51151. Most Rev. Dr. O'DONNELL.—Perhaps the best thing to do would be to come to some understanding with the officer in charge of it. He won't treat you unreasonably. How much of an enlargemer were they giving you?—About ten acres.

51152. It would be better to come to some arrang ment with them so as to secure those ten acres?— am entitled to my enlargement of what I signed fo to get it elsewhere. There is plenty of grass lan beside where I live that is not divided.

51153. Sir JOHN COLOMB.—Have you applied t have some allowance made for what was taken awa from you, and have they positively refused to do it —Mr. Stuart refused. He said they would not giv any abatement.

51154. Sir FRANCIS MOWATT.—Did he give an reason why he would not?—He did not, and I am ou of it ever since.

51155. You had better see Mr. Stuart again?— saw him in town a few months afterwards, and wa talking to him, and he gave me no satisfaction.

51156. I am afraid we cannot make him. I hop that any promises the Estates Commissioners mak they will keep?—When I bought this land I was en titled to my enlargement.

51157. Most Rev. Dr. O'DONNELL.—When the gave the strip on which this passage is to the ma who wanted water, did that mean parting with muc of the enlargement?—Six or seven feet wide for abou 100 yards, or something like that.

Sir FRANCIS MOWATT.—Your statement will be pu before the Estates Commissioners, but we have n power over them.

The Commission adjourned.

ONE HUNDREDTH PUBLIC SITTING.

MONDAY, SEPTEMBER 2ND, 1907.

AT 11 O'CLOCK A.M.

In the Courthouse, Swinford.

esent:—The Right Hon. Sir FRANCIS MOWATT, G.C.B. (in the Chair); The Right Hon. Sir ANTONY MACDONNELL, G.C.S.I.; The Right Hon. Sir JOHN COLOMB, K.C.M.G.; Most Rev. Dr. O'DONNELL; JOHN ANNAN BRYCE, Esq., M.P.; CONOR O'KELLY, Esq., M.P.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Sept. 2. 1907.

Mr. Mark C. Henry.

Mr. MARK C. HENRY examined.

51158. Sir FRANCIS MOWATT.—You represent the unty Council of Mayo and the Swinford Rural Dis- ct Council?—Yes.

51158A. Are you a farmer?—Yes. I have about statute acres. My valuation is £10 on land and 4 on buildings. The annuity now would be about for the land. I pay nothing for the houses.

51159. Sir ANTONY MACDONNELL.—Then there has n a reduction from about £10 rent down to £4 nuity?—My valuation is £10, and my rent was ut the same.

51160. Was that a second-term rent?—I never got ent fixed.

51161. Sir FRANCIS MOWATT.—Where is the hold- situate?—Near Charlestown. I think it neces- y to state at the outset that the Swinford Union upies a peculiar and altogether exceptional posi- n among the Poor Law Unions which constitute "congested districts." In the first place, the nation per head of the population is the lowest in land, with the exception of three Unions which der on the sea, and in these latter cases the occu- rs have advantages which are not possessed by an and Union like Swinford, among which are the ources provided by fishing and other industries. ain, the Swinford Union does not contain as ex- sive tracts of prime land as other Unions in ayo, for the reason that at the time of the estab- ment of auxiliary workhouses in the county the ginal boundaries of the Union were so altered t vast tracts of rich land, from which the people l been evicted, were transferred from Swinford to newly constituted Unions, and the present boun- ries of the Union were, for the most part, drawn nd a vast area of comparatively infertile soil, which s crowded with the families evicted from the prime ds then cut off from the Union. The Union of inford has a population of 44,162, and a valua- n of £41,783, being at the rate of 18*s.* 11*d.* per d of the population. The superficial area of the ion is 151,560 acres, but the actual area under ps (including meadow and clover) and grass, toge- r with the area of uncropped arable land, is ,588 acres, the remainder being made up of extent under water, road, bog, etc. There are 00 holdings in the Union, made up as follows:— mber of holdings valued under £4, 4,768; num- of holdings valued from £4 to £8, 2,327; num- of holdings valued from £8 to £15, 395; number holdings valued from £15 to £20, 77; number of dings valued over £20, being mostly comprised of zing farms and lands in occupation of landlords grazing purposes, 133. Total—7,700. The ncipal facts disclosed by the above statistics in nection with the extent of the problem in Swin- d Union is that out of 7,700 families in the Union re are 7,095 families, say 35,000 individuals, se holdings are obviously incapable of affording m subsistence, and who, in many cases, are only served from year to year from perishing of famine the earnings of the adult male population in gland and Scotland, and by the remittances of ir relatives in America. The number of migra- y labourers from the Swinford Union who go to England every year is over 5,000, being about 50 per cent. of the number from the entire county of Mayo, and about 60 per cent. of the total male population of the Union between the ages of 20 and 60 years. In addition to the annual migration of labourers, there is a constant and disastrous drain on the population by the number of young boys and girls in the flower of their age and strength who are compelled to emigrate to America each year to assist by their hard earnings to keep the pangs of hunger and oppression from those at home. The total emigration from the county of Mayo since 1851 has been 176,817. Of these more than 44,000 left the Swinford Union, and this number almost equals the present population of the Union. In 1881 the population of the Swinford Union was 53,714; in 1901 it had fallen to 44,162, being a decrease of 18 per cent. By the amelioration of the land tenure in Ireland and the settlement of this question on the recognised equitable basis the stimulus thus given to the agricultural industry, and by the revival of the other decaying industries also, these emigrants could easily be induced to remain and give the best efforts of their lives towards building up a prosperous and contented country at home. Owing to the congested state of the holdings, and the very poor quality of the land, occupied by small tenant farmers in the Union, the crops are easily a prey to disease in many forms, but the havoc wrought by the potato blight in some years leaves the families of these poor farmers surrounded by circumstances of acute distress. In the year 1905, and again in the present year, owing to the failure of the potato crop, very great distress existed amongst poor occupiers in the Union. In these two years a sum of nearly £8,000 was expended in relieving the acute distress which existed.

51162. Sir ANTONY MACDONNELL.—When you say 1905 and the present year do you mean 1906?—I am not quite sure whether it includes portion of 1907, because we had some distress this year which was relieved by grant.

51163. It might be the year 1906-07?—That might be it. The remedy is to abolish dual ownership in the land by a system of compulsory purchase, to break up the grazing farms and to redistribute them among the people, and to provide the occupiers with holdings which will be capable of maintaining them. Even within the confines of the Union, although it is the poorest in Ireland, much can be done in this respect to ameliorate the condition of the people.

51164. Sir FRANCIS MOWATT.—I need not ask you any questions about the statistics which you have given, and which we already have, but the remedies you suggest are the abolition of dual ownership in land by a system of compulsory purchase, the breaking up of the grazing farms and their redistribution among the people so as to provide the occupiers with holdings capable of maintaining them. Assuming you have compulsory purchase, it is necessary to consider on what terms that compulsion should be put into operation. Do you consider that where the State uses compulsion for its own purposes the landlord from whom the land is taken should receive a sum which makes up to him his previous net income?—I would.

Sept. 2, 1907

Mr. Mark C. Henry.

51165. Net income being income subject to all deductions for collection, arrears, and whatever reduces his income?—Yes. That is my view.

51166. Assuming that done, if it is to be a remedy, I assume that the purchaser, the tenant of the small holding, will only have his position improved if the annuity, which is another word for the value of the land, enables him to live on his holding. The tenant would be in no better position if he gets an enlarged holding unless he gets it at a rent which will enable him to live?—If the tenant gets a good holding of land, and if he has it at the original rent at which he had it before, it would be an improvement.

51167. If you supply a tenant with a holding it must depend on the amount of rent or annuity which he is going to pay for the holding whether his position is improved or not?—If he gets more land bought out he will pay less rent than previously.

51168. However much land he gets, unless he pays a rent that will enable him to make a living on the holding his position will be no better?—Yes.

51169. The purchase of the land proposes that the landlord be paid such terms as represent net income?—Yes.

51170. You are going to allow a small holder to purchase land from the landlord; you have also to see that the purchase must be on terms which will enable the tenant to make a livelihood, or else he is no better off?—It will assist him in making a better livelihood.

51171. Only if the rent which he is to pay enables him to have a margin for the support of himself and his family?—It will help to make a margin.

51172. Will the sum which you are prepared to pay the landlord in order to provide him with his net income permit of your selling to the tenants on terms which will enable them to make a better livelihood?—I don't want what you call a good livelihood. There are different ranks of livelihood in this part of the country.

51173. Let us call it economic holdings if you like?—The only way I could answer that would be that the tenants would be improved, to what extent I cannot say.

51174. Would a tenant be improved if he had to pay an annuity which would prevent him from earning a livelihood for himself?—Certainly not.

51175. That being so, I ask you whether it would be possible to pay the landlords a sum which would produce their net income, and at the same time sell to the tenant at a price which would enable him to make a fair livelihood or have an economic holding without there being a loss to be sustained by somebody between these two processes?—It is a very difficult question to answer.

51176. I only want to come to this—If the landlord is not to lose, and if the small holder is not to lose; that is to say, if the latter's position is to be improved, and if there results a loss on the total transaction, between the two bargains, who is to bear that loss?—I should say the landlord. Somebody must lose.

51177. You don't think the State should lose it?—When you say the State you might be interfering with myself to a certain extent. I would rather that the landlord would take the whole responsibility.

51178. It is not responsibility, but the money?—I mean the loss.

51179. Mr. Sutherland.—You said that the first thing you recommended was the abolition of dual ownership?—Yes.

51180. You give no reason for that. You seem to assume that it was necessary?—From experience, I find that where it has been abolished the people are much improved.

51181. You don't know why?—Because they become owners of their own property, and have a more lively interest in the holding that they are living on when it belongs to them, and it improves the spirit of the people and all their surroundings.

51182. That is to say, the tenant will be rid of his landlord?—Yes.

51183. Do you think will ownership always exist in land tenure?—The landlord is removed, and we put the State in his place, and the rent is reduced.

51184. So that the abolition of dual ownership in itself is no remedy?—It appears to be a very good remedy for the improvement of the tenants.

51185. I ask you the question because dual ownership is being abolished?—Yes.

51186. All those difficulties that the Chairman was putting you arise from the way in which you are going to abolish that dual ownership. When you say dual ownership you assume that there is another person beyond the landlord who owns the land?—Yes.

51187. Why is the other person who owns the land?—The tenant.

51188. How did he acquire it?—I suppose it was hereditary.

51189. When did the Irish tenant get ownership of his land?—I could not tell you that.

51190. In 1881 the Irish tenant got ownership. When did the ownership of which you are speaking begin?—From time immemorial, as far as I know.

51191. It was only given legislative sanction in 1881?—You may begin then.

51192. My point is this—the Irish tenant got ownership in 1881. How much did he pay for it?—He paid more than even the landlord should receive.

51193. How much money did he pay?—The actual yearly rent he had purchased time after time before 1881.

51194. Then why should he purchase it now?—There is no other remedy. It reduces the rent for us, and makes it easier to live.

51195. There is no principle in it at all?—There is a great deal of principle in it as far as the tenants are concerned.

51196. Why, in your opinion, is the abolition of dual ownership begun in 1881 necessary?—Because it is an improvement in the condition of the poor people. They pay less for their lands, and it infuses a little independence among a class of people who are so crushed for years and years.

51197. In other words, you think no price is dear enough to get rid of the landlords?—I tell you from experience, some of them would agree with you; not the whole of them.

51198. Sir Antony MacDonnell.—We may take it as fixed that land purchase is to go on, and that the land of the country is to be purchased from the landlords and transferred to the tenants. That is the basis of the Land Purchase Act, and of all our agrarian administration at present, and what we have to see is how this can be done most expeditiously. You tell us of the great congestion in the Swinford Union. You also say there are a number of grass lands in the Swinford Union?—Yes, some.

51199. Is there enough untenanted grass land in the Swinford Union to relieve congestion in the union?—I don't believe there is.

51200. And if you want to raise the average holding to twenty acres you must look outside the union?—Yes.

51201. Is there any objection on the part of the people in the Swinford Union to leave the union and migrate to other places?—You will find exceptional people occasionally, I dare say, but they are beginning to think of it, and I believe that they now volunteer in great numbers.

51202. Is there less indisposition to go now than there was in your remembrance?—Yes, a great deal less.

51203. You referred to the question of industries. What industries would you be able to create in the Swinford Union?—If there was good employment of some kind it would be very advantageous.

51204. What sort of industries would it be useful to create?—You might have woollen factories and lace factories.

51205. Is there any old indigenous industry which might be revived?—The milling industry has been dead for some time in this union. With the exception of corn milling, there is no other industry that I know of that was there.

51206. You mention that there was large emigration from here to America?—Yes.

51207. Do the people in Swinford Union go to any particular place in America?—Not to any particular place. In my district they go mostly to one particular place, and in another district they go to another particular place.

51208. We have had evidence in some parts of the country that the people go to certain places in America, and that there is a flow backwards and forwards between that place in America and the district in Ireland from which the people had gone. Is that the case in regard to the Swinford Union?—If people in the Swinford Union have friends in a particular place in America they generally go to that place, and the connection with that place increases.

51209. There is not any particular State in the ion?—No particular State.

51210. Is there much returning of Irish emigrants? There are a great many this year.

51211. Do they come home to settle?—Some of them ne to settle.

51212. Have they bought their holdings?—Returned igrants generally buy a holding, and pay an exitant price for it, or get married where there is ne poverty, and raise the status of the family in the se.

51213. Is that taking place on a large scale?—It getting larger every year, as far as I know.

51214. What sized holding would they be?—Any ding; perhaps five or ten acres.

51215. Are the holdings they buy the holdings that e been held in the families?—No, but sold by ers.

51216. What becomes of the people who sell them? I could not tell you.

51217. With regard to these purchases, is there no ling of land grabbing?—No, they are voluntary nsactions on both sides.

51218. Is there any feeling on the part of the local ple—any aversion or any dislike to migrants tling in their midst and taking holdings belonging other people?—Not the slightest. They only come n the other people sell the holdings to them.

51219. Is the standard of comfort which exists ong these people higher than that which exists in Swinford Union?—The standard of comfort among se who buy the places is much higher because they e the means.

51220. Is there a gradual improvement, in your llection, in the method of living in the Swinford ion?—There is a vast improvement in my recollecn.

51221. Is there an improvement in the degree of tness with which the houses are kept?—There is a arkable improvement.

51222. Is it still a common practice to keep the tle and pigs in the dwelling-houses?—Not where Congested Districts Board have any authority. re they have them removed.

51223. Is the practice still usual in places not under control of the Congested Districts Board?—It is.

51224. Has any impression been made on these ple by the system of parish committees?—Yes, a at impression.

51225. Is there a feeling springing up among the ple against keeping cattle in the house?—Yes. ey are beginning to learn that it is wiser to have m outside. In all places purchased by the Board y are very particular about having these cattle moved.

51226. In reference to the operation of the Congested tricts Board in your locality, have you any claim make, or any suggestions to make in regard to its provement?—The improvements are very remarke. I think if they had more freedom and more ds they would do a great deal more.

51227. What do you mean by more freedom?—wer to take up farms, and power, with money, to ke more improvements, such as roads and drains. ains on a large scale would be very advisable in district, where the land is poor, wet, and bad.

51228. Let us take drains. Have the Congested tricts Board made any drains?—They have done a at deal; but there is still a lot that remains uned.

51229. Sir Francis Mowatt.—You mean arterial inage?—Yes.

51230. Sir Antony MacDonnell.—You say that at good could be done if there was more money?—s.

51231. Sir Francis Mowatt.—Granted that there s more money, is there any other improvement in action of the Board that you would suggest?—I nk they are anxious enough to improve the alities in every way if they had the money. The nt of money, in my opinion, is the only thing venting them from doing this thing.

51232. Is there any other point in connection with s work of the Board that you wish to refer to?—No.

51233. Sir Antony MacDonnell.—Have the Board uired any land in the union?—Yes, the Dillon tate.

51234. Is there much more land in the Swinford ion that they could acquire that would be suitable their purposes?—Yes, a great lot of land.

51235. Most Rev. Dr. O'Donnell.—I think you said, in answer to Sir Antony MacDonnell, that there was not sufficient land unoccupied in the union to remove congestion?—No; I don't believe there is. We would have to go outside the union.

51236. Sir Antony MacDonnell.—In your opinion, there would be no objection in your union, so far as you know, to remove out of the county to Roscommon?—You might have a few people objecting. I think that the majority are beginning to feel that they would be glad to be improved by leaving bad land and going to good land, with larger holdings.

51237. There is no industry in the union, with the exception of agriculture?—None; and that is paying very badly at present.

51238. Sir Francis Mowatt.—We are agreed that it was your evidence that, on a sale, the landlord ought to get such a sum as would produce his net annual income or thereabouts; and I think we agree that that sum might possibly be such that when you came to sell the lands to the tenants the price at which they would have to buy might be more than they could afford?—I could not answer that question.

51239. Is not it possible that that might be?—It is quite possible.

51240. Having in view that possibility, and you being an advocate for compulsion, would you be disposed to say it was fair that the Board should only exercise its compulsory powers to purchase on a demand by, say, two-thirds of the tenants, who would be told that such a demand involved purchase by them on a basis of the landlord receiving his net income?—I don't think that the tenants would complain in any case. I could not tell you the result. The tenants would not complain of paying what would bring the landlord his net income of the land at present.

51241. Most Rev. Dr. O'Donnell.—I notice that the number of small holdings rated under £4 in the Swinford Union is very large—nearly 5,000?—Yes; nearly 5,000.

51242. How do you propose to enable the people who occupy those holdings to become economic. It would appear to me that there are two ways—one by migration, and the other by improving the holdings?—Yes.

51243. Are both ways possible?—Both ways are possible, to be sure.

51244. You alluded to arterial drainage that had been done; was that the Lung drainage?—I mean a common scheme of main drainage throughout the country.

51245. I understood you to say that some drainage of considerable service had already been done?—Yes. I was speaking of my own locality. As you refer to the Lung, it is a remarkable change for the better.

51246. I believe that the river has been drained for many miles of its course?—I believe so.

51247. What has been the result?—I really could not tell you. I don't know the district very well.

51248. Do you know it sufficiently well to tell the Commission that the land along the bank of this drained river has been much improved from the agricultural point of view?—Yes; and I am told it will be occupied by people who can live on it now.

51249. Is it your opinion that work of that class is capable of making holdings which otherwise would be uneconomic quite economic?—No; I don't know about that.

51250. In reference to agricultural methods and reclamation, is there much room in this Union of Swinford for improving the produce of the soil by improving its tillage?—There is a great deal of room for that. We have over 50,000 acres of mountain in the Swinford Union, and land that can be very well reclaimed.

51251. You think that the people would now migrate freely?—I dare say they would. They are beginning to feel that it would be much better to migrate than to remain as they are fixed at present.

51252. There might be some who would not like to go, but a considerable number would go?—A considerable number would be anxious to go.

51253. You don't believe anyone would put obstacles in their way if they chose to migrate?—I don't believe anyone would.

51254. Would there be grass lands not far away to which these small holders in the Swinford Union might migrate?—I dare say. I suppose there might be 2,000 or 3,000 acres, perhaps 5,000 acres, in the Swinford Union, of land occupied for grazing purposes alone.

Sept. 2, 1907.

Mr. Mark C. Henry.

51255. Is that in the County Mayo?—Yes, in the Swinford Union alone.

51256. In this Union there is so much land that could be turned to account for the enlargement of holdings and to provide for migrants?—Yes.

51257. You say that there are not many industries at present existing apart from agriculture?—Yes.

51258. There used to be an old milling industry?—That is the only one that I remember.

51259. There was no woollen industry?—Not that I remember.

51260. Is Foxford near you?—Yes.

51261. Have you any acquaintance with the project there?—No.

51262. Then I won't ask whether it would be possible to repeat these experiments with success in other parts of the Union. For girls, what has been tried in the Union?—They have lace schools.

51263. All the same, where does the rent come from? Is it off the farm, or from these industries, or from America and England?—America and England principally.

51264. Do the people go largely to England from this Union?—About 50 per cent. of the male population leave the Union annually.

51265. These go to England?—Yes.

51266. How much a man, as a rule, do they bring back?—They bring from £8 to £10 and £15 in the year; perhaps more.

51267. If they brought £10 apiece that would be £50,000 a year coming into the Union?—Yes. I would say that £10 on an average would be very good earning.

51268. I suppose that nearly every family has a member in America?—In my district nearly every family has at least one, and perhaps two.

51269. Is there much money coming from America?—Yes, a considerable amount.

51270. The girls never fail, as a rule?—Not that I am aware of.

51271. The men send a good deal home too?—Indeed they do.

51272. Have you any suggestions to make other than those we have gone over for the employment of men and women at home?—I could only suggest such industries as would be thought of by people who had given the subject consideration, such as lace making and woollen factories.

51273. Suppose that the improvement was conducted on two lines, the farms brought into better agricultural condition on the one hand, and on the other some of the people given facilities to migrate, would you consider it any great disadvantage that there still should remain a fair number of people on small holdings who could go occasionally to England, or might have labour on the big farms in the neighbourhood?—I would not. I believe that they would get employment.

51274. Would it be that they would supply, to a large extent, the place occupied by what are called labourers in other places?—Yes. They would.

51275. Sir Francis Mowatt.—How many months in the year are the migratory labourers as a rule absent in England?—Generally they go in the month of June and return in October, or from that up to December. You might say on an average about four or five months.

51276. Mr. Bryce.—When the grazing lands are distributed by the Congested Districts Board, do you consider that it is fair that the first consideration, or the only consideration, should be given to the congested tenants, or do you think that consideration should also be given to sons of tenants in the neighbourhood?—I think that the tenants themselves should be treated first.

51277. If there is a distribution of grazing land, you think that the first consideration of the Congested Districts Board must be the relfeving of congestion?—Yes.

51278. You would postpone the claims of any sons of tenants adjoining the grass land estate to assistance until you had provided for the congests of the district?—I think it would be a good idea, postponing settling the sons until the others would be fixed.

51279. You are aware that in the case of these untenanted grass lands the landlord has two interests, if I may say so: he has got his own interest, just as in the case of tenanted land, and he has also got the tenants' interest, as it were, the occupation interest. Those two, looked at together, are of more value than the one. When you buy the grass land estate and begin to distribute it, do you consider it would be fair to ask the migrant who is put on it to pay any share of the landlord's occupation interest in his annuity. Suppose the land is tenanted, there is the landlord's interest and the tenant's interest. The tenant's interest is valuable, and can be sold for five, ten, or fifteen years' purchase, and the landlord has got his interest, which would be bought out under the Act of 1903. When you have got untenanted lands, grass lands, there is no tenant's interest. The landlord has both the interests; has not he?—That would be one interest.

51280. It can be divided into two. He has got the occupation interest as well as the proprietary interest?—Yes.

51281. When the land comes to be distributed do you think it would be fair to ask the migrant put on that land to pay in his annuity something representing the occupation interest?—I think if the landlord received his net income and the tenant received the land it is a reasonable purchase price. They cannot divide the purchase price between the two interests; that is, the occupier's and the landlord's.

51282. Suppose there is a difference between those two, who is going to pay for it?—I cannot exactly answer that question.

51283. Do you think the State should bear the loss?—I think that the landlord should bear it.

51284. You have just said you think the landlord ought to get his net income?—Yes.

51285. Suppose that the tenant cannot afford to give what will produce the landlord's net income?—That is a question that I cannot very well answer. I cannot reconcile the fact that the landlord should get his net income with asking him to bear any portion of the loss.

51286. If there is going to be any deficit, who is going to pay it?—If the landlord does not, the State must. I would not ask the tenant certainly.

51287. Sir Antony MacDonnell.—Say that there is a grass land farm of 100 acres, and that that farm is divided into four farms of twenty-five acres each, and that an annuity was assessed on each of these twenty-five acres at the usual rate, something like 20 per cent. under second-term rents, would it be fair to ask the tenant who is let in to pay a fine on entrance. Here is a holding of say twenty-five acres, of which the second-term rent would be £20 and the annuity assessed on it would be £15, would it be fair to the tenant who is let into that holding on a rent of £15 to ask him to pay a fine of say £35 or £30?—That is a tenant you are planting on a new holding?

51288. Yes?—That is the interest of the landlord he would be buying.

51289. That is the point I am coming to, because if you admit that it is fair to ask the tenant to pay a price then you do admit that the tenant should contribute?—They generally do contribute. They pay something for the good-will of the holding, and continue to pay the annuity afterwards.

51290. Mr. Sutherland.—I was rather surprised to hear your admission that there was a tenant right where no tenant existed?—I don't remember saying that. That would be a very unreasonable thing to say.

51291. Sir Antony MacDonnell.—Take the case of a tenant on a holding on which a second-term rent is fixed. The tenant defaults in paying his rent, and he is evicted, and the holding reverts to the landlord. There the landlord has, in regard to that holding, not only his original right to the rent of the holding, but also the right of the tenant, which has lapsed; and in that sense the landlord is possessed of the two rights?—I believe according to law he is, but I believe that the tenant in that case should not be asked to pay a fine.

51292. A new tenant should not be asked to pay it?—I don't think so.

Sir HENRY LYNCH BLOSSE examined.

Sept. 2, 1907.

Sir Henry Lynch Blosse.

1293. Sir FRANCIS MOWATT.—You are a landlord dent in Mayo?—Yes. I reside at Balla, in the nty Mayo, and am a resident landlord. I am ly and willing to sell every acre of grass land I sess, exclusive of my demesne, and my tenanted d, provided both be purchased simultaneously. By t I mean not selling one without selling the other. ave signified my willingness to sell to the Con- ed Districts Board, who have the matter under sideration. They have all the papers and so forth ands for a couple of months, in the possession of . Doran, their chief land inspector. The price I sider fair is such a sum as when invested at 3½ cent. will bring in my present net income. Any- g less than this would be inequitable and unrea- ble. I acquiesce in the principle that holdings ld be enlarged and smaller tenants migrated, in r to meet the exigencies of the situation. I also k that the sons of well-to-do tenants on each te should be afforded an opportunity of being ted if their fathers could start them fairly; that o give them a chance of making a good living on land.

294. Start them on new holdings?—Yes. In r words, I suggest that the whole of the lands ld not be used for the abolition of congestion, but tenants' sons should be given a chance on their estate.

295. Should be given a chance before the evil of estion is dealt with?—No; but there will be land in many places.

296. When the problem of congestion is dealt , if you have any margin of land left, it should. ised for dividing among sons of tenants?—Yes, if possible, on the same estate, so that the fami- should be kept together.

297. Sir JOHN COLOMB.—But not until the con- ion has been relieved?—Yes; but by that I don't n that every tenant in Mayo with an uneconomic ing should be kept in Mayo. There are Roscom- , Westmeath, King's County, and other places re there are plenty of grass lands, to which I am many people would be willing to go. Not that lieve it will prove for the benefit of the country ivide up all the grass ranches, but in order to d the Government an opportunity of testing the ty and efficacy of their principle; and in taking this attitude I should, at least, be indemnified nst any loss of income. It would be nothing t of injustice to put me or any other landlord yielded to the Government request in a worse ion than he is in at present.

298. Sir FRANCIS MOWATT.—As regards the bene- o the country of dividing up the grass lands, we heard so much evidence on both sides, and it is ompletely a matter of opinion, that I won't, ss you desire it, ask you to develop that. Should wish to make any observations on that you may, we have had most exhaustive evidence on both , representing both schools of thought?—Very I won't waste any time over it.

299. Sir ANTONY MACDONNELL.—You say that sum which you consider fair is such a sum as invested at 3½ per cent. will bring in your pre- net income, and that anything less than that d be inequitable and unreasonable. We may ne that, to get at the basis of value, if the land- s net income is to be taken as fixing it, that your nt books of your estate should be examined, and verage rent which you collect year out and year ould be ascertained from them, and from this ge, so ascertained, should be deducted the cost llection, law costs, and so on, which are under- in estate management; and you will get in way your net income?—Exactly.

300. The question is, what multiple should be ed to that net income in order to ascertain the which you should get?—I refer to that later on. is a thing we have to work out.

301. The point I want to suggest to you is this, the multiple should be determined by the charac- the security. If it is a first class security 3¼ per cent. would be quite fair. Is land in Mayo resent a gilt-edged security?—When law and are enforced it is a gilt-edged security, un- edly. Anyone can see by the rentals how it is Of course there are some unfortunate men agents don't take the trouble to collect the rents. For the most part those are in the courts at present.

51302. Don't you think that if a scheme of land purchase is to be initiated on a large scale, by the State buying practically the county, the landlords should be willing to sell on a 4 per cent. basis?—By that you mean selling at such a price as if invested at 4 per cent. would produce the net income?

51303. To get from it his net income?—Most of the estates in this county, and in Ireland, are entailed. We are simply tenants for life in them, and the question comes up, what your trustees can invest in to give you your net income at 4 per cent. There are very few securities I fancy now. It may be just at this moment, when things are very low, that you can get a 4 per cent. gilt-edged security that the court would allow trustees to invest in without danger to themselves. Stock is low at present, but when they go up to their usual price I doubt very much if you will be able to invest at 4 per cent. Of course a man who is owner in fee, and will get the cash, and can do what he likes with it, can get very good industrial investments, like Guinness's, and things like that will pay him close on 4 per cent. for his money, or perhaps a shade over it.

51304. Mr. O'KELLY.—You said you were anxious to give land to sons of tenants. You are negotiating at the present moment with the Congested Districts Board for the sale of your property. Suppose you had effected a sale with the Board, what chance would the sons of tenants have?—I am assuming that we are going to have an entirely new system of land purchase, and all that.

51305. Let me suggest that the object of the Congested Districts Board is the abolition of congestion, and not to benefit the sons of tenants. If you sell to the Congested Districts Board, how are the sons of tenants going to get the holdings that you desire to give them?—How will the Congested Districts Board be able to fill up all the grass lands of Ireland? That is an impossibility, though I know that families are very large. We are very successful in that way.

51306. Don't you think really that the congests from the district ought to have the first claim?—I don't think they should be all taken in over the same county, because there are plenty of other lands elsewhere.

51307. But don't you think that, as the object of the Congested Districts Board is to put an end to con gestion, the sons of tenants cannot have any claim on the land until the congestion is relieved?—That question was asked by Sir Francis Mowatt a few minutes ago, and the answer made was that the lands over and above those required for the relief of congestion should be given to the sons of tenants, if possible on the same estate, so as to keep the family together.

51308. Observe that you have not in the country a sufficient amount of land?—That is a matter of opinion.

51309. You have statistics to show that?—I am afraid that statistics can be made to show almost anything you like.

51310. Suppose that you had not sufficient land available for ending congestion, would you consider the claims of congests from the district?—Yes.

51311. Mr. BRYCE.—When you talk of net income what outgoings do you deduct?—Agents' fees, taxation, money that you allow tenants for rebuilding walls, and for drainage on their lands, in fact the things that Sir Antony MacDonnell says that he includes as estate expenses.

51312. You have alluded here to the question of arrears. You say in your precis of evidence that on your estate there are practically none; but there are a great number of estates in the congested districts on which there is a very large amount of arrears. Suppose you found an estate which for very many years past always had a very large amount of arrears, would you consider it would be fair to make any allowance for those arrears, and deduct a certain amount for them off the net income?—It depends entirely on how that estate has been managed.

51313. You mean that if the estate had been properly managed there would be no arrears?—Very little arrears, and for this reason. On a properly managed estate if the arrears become too heavy they are wiped off immediately. At least that is my experience of

Sept. 2, 1907.

Sir Henry Lynch Blosse.

landlords in the county. If they see that a man cannot pay the rent they will generally wipe it off on his paying a quarter year's arrears and the rent.

51314. Sir ANTONY MACDONNELL.—Would you be content to take it this way—as the average rental over a term of years?—That would be really the proper way to take it. One time there is a bad year, and they are a good deal behind. Another time there is a good year, and everything is paid up.

51315. Sir FRANCIS MOWATT.—Ten years would be a fair period?—Yes; or fifteen.

51316. Mr. BRYCE.—So, over an average of years you would be willing to allow a deduction for arrears? Provided the estates were properly managed. I know one man driving a car about in fine style. He has not paid a bit of rent for fourteen years. He says so himself. I was talking to him the other day. The arrears are on estates in court.

51317. Sir ANTONY MACDONNELL.—Say that your income is £1,000 a year, and that during ten years you have received £9,000—that is to say there was a loss of £1,000 on the ten years—in that case your net income would be based on the £9,000 and not on the £10,000?—Exactly.

51318. Most Rev. Dr. O'DONNELL.—Take just your own estate. I suppose it would be true to say that there are not, so far, very many small holders on your estate?—Outside of the town tenants, I don't think I have got anybody under £5 valuation. I won't be perfectly sure, but I think not. I think there is one small tenant near Clooncoonagh.

51319. I am not going to ask details at all of the place. I presume you are aware that the Board in buying an estate outside a scheduled area is empowered to enlarge small holdings of valuations under £5. If the valuation is above £5 the Board has no such power outside the scheduled area. It has been known to the public that the Board is always anxious to enlarge holdings valued under £5 when facilities are available. Suppose your estate were bought, and the Board were empowered to enlarge holdings on that estate, would not you consider that the uneconomic holders on neighbouring estates purchased by the Board would have a prior claim for holdings on the grass lands purchased from you to the sons of tenants on your estate?—What I said was that the congestion should be first ended, and any land left over should be divided among sons of tenants; but. as far as possible, they should be kept on the same estate, for the sake of keeping the families together.

51320. Supposing that surrounding your estate, or within a distance of fifteen miles of your estate, the Board had another estate on which there was a large number of small holdings, would not you consider it reasonable that a board charged with relieving congestion should bring in industrious men and give them suitable holdings on that land bought from you before giving land to the sons of tenants on your estate?—I don't think that. I think that the sons of tenants should get some show.

51321. At present you are aware, I am sure, that in such a case the Board has statutory power to provide for sons of tenants if any remnant remains; but would not you consider it the first function of the Congested Districts Board to provide for the small uneconomic holders on the estate and in the neighbourhood of the estate?—On the estate first, and they may use the rest of the grass lands for the purpose of relieving congestion in the vicinity. If there is any over from that then it should be divided among sons of tenants.

51322. I won't ask you to say what you don't see your way to; but would you think it right for a Board like the Congested Districts Board to look to the small occupiers on estates purchased by it in your neighbourhood before providing for sons of tenants on your estate?—Yes; I think they would have to do that. I don't think it is right, but I think they would have to do it. You yourself said you could not do anything to people over £5 valuation outside the area.

51323. As the legal powers of the Board stand; but it would be strange if the process of relieving congestion were not facilitated by the recommendations of a Commission like this. I am not going into the net income from tenanted land at all; but I have a question to ask with reference to net income from untenanted land. How should it be ascertained?—By simply taking the amount received. Say I have farm let to a man for £100 a year. The percentag of the agent's fees for the £100 would be £5; the taxes on that would be so much; then there is a allowance for walls and buildings, so much; an what remains would give me my net income.

51324. Do you include anything for superintendenc —That is supposed to be under the head of agent fees.

51325. And rates?—I include rates when I sa taxes.

51326. It is said constantly that the men brough over forty and fifty years ago, Scotch farmers an others, to take ranches of Irish land, frequently lef to the great loss of the landlords, as they left withou paying arrears that had accumulated. Now, if in district it were certain that within living memory th owners of the grass lands had sustained such losses in estimating the net income of an owner from gras lands, would you go beyond the recent experience when he is able to let his land and go back t the period when these people came over and had t leave without paying their rents?—To tell the truth I never heard of a case like that in our part of th country.

51327. I put you a hypothetical case. I don' suggest that it came within your experience?—Th only case I ever heard about of Scotch people coming over was Simpson, who went in for the highest clas of farming, and he did not succeed very well.

51328. As it is not within your experience I shall not ask you about it further?—I have never seen a case of it.

51329. In evidence a few days ago this was stated t us—that in a particular case within the knowledge of the witness and others, arable land was taken up from the tenants forty or fifty years ago, without any compensation, and I think also they were not in arrears. That land has since then been in the hands of the owner or his successor in title. In a case of that kind, if one were paid for the grass land, would you make a deduction for the tenant right which was confiscated?—No, I would not; because there must have been some reason. Probably those people were paid so much for going out.

51330. The witness, Mr. Davis, from near Ballina, gave his evidence with great clearness?—I know him. I would not pay much attention to that evidence.

51331. Would you be able to give an opinion in a case of the kind?—I don't think I would.

51332. If the land had been taken that way, without any compensation for tenant right, and the people sent back to the mountain?—As far as I can understand that must have taken place before there was any such thing as tenant right. There was no tenant right up to 1881, except in the North of Ireland. Here we never had it.

51333. We may take it that these men were the occupiers of this land. Doubtless they made the improvements. Whether they had a legal standing or not, they had certain equitable rights. Since then the law has recognised these rights. If the owner is to be paid for these grass lands, what I was anxious to know was whether you thought that some deduction should be made in the case of a transaction of that kind?—No; because he only got his own back. If it had been after the Act he could not have taken it. I think, as a matter of fact, if you were to look through the estate books you would find that a great deal of money was expended on improvements years ago. I know one estate near Claremorris on which there has been over £10,000 expended on improvements by the present owner and his father.

51334. On the other hand, there is no doubt that the tenants have improved very much?—I don't know that they improved very much. They did a great of burning or scrawing. They don't cultivate the land well. They don't get the full value out of it.

51335. Will you agree that whoever improves it, whether landlord or tenant, it is a very hard thing to be put out of it without compensation?—Yes.

51336. Sir JOHN COLOMB.—With regard to the question of improvements forty or fifty years ago with your knowledge of Ireland, do you or do you not think that it would be extremely difficult to get reliable, accurate information upon which you could base a business arrangement to-day, of transactions that took place forty years ago?—Very probably; but I dare say you could get such information within the last ten or twelve years.

51337. It would be the case, perhaps, on large, well managed estates containing grass lands. The records would show pretty clearly what were the transactions of forty or fifty years ago, or do you think that landlords usually keep their estate books for so long a period of time?—I doubt very much whether they had that in Mayo in those days.

51338. Therefore I take you to reply that to base present compensation and present dealings with the land on what happened forty years ago would be a very difficult process?—Yes.

51339. I understood clearly how you proposed to arrive at the net income of an owner of untenanted land; but surely the illustration and the method you have will only apply where the land is let out on the seven months' system, or some other way, or where the landlord has continually worked it as his own grazing farm, entirely with his own stock?—The books would show what profit he has made out of it.

51340. Would you say that the rule applies where, though the land is in the landlord's hands, he may for one years let it to a grazier and some years work it in and out with other lands, and perhaps with his home farm?—That happens occasionally.

51341. Do you consider that your rule would at all apply to land so held?—I think it would work fairly well.

51342. Do you think it is possible, where a landlord has untenanted grazing land in his own hands, and he has used it, although it is at some distance from his home farm, in and out with his own demesne, that it is really possible to applot, in respect of these lands, exactly what his net income was?—Not exactly; but you can give an idea of what it is. Suppose he had 100 head of cattle on it nearly all the time, he makes a profit of so much a head on them.

51343. Take the case in which it is worked as part and parcel of a tillage farm elsewhere. It is not a constant thing. He is continually changing stock. How are you to applot, as between the tillage farm and the home farm and the grazing farm, on which there is that constant fluctuation, the income derived from the grazing farm?—You can only tell the net income from the whole land in his own hands.

51344. You admit that part of it might be his demesne, which is not in question at all?—Yes.

51345. As I gathered from you, your policy in respect of tenants' sons was that an estate being bought, the congestion on the estate must first be relieved, and any balance of land remaining over must go to the sons of tenants on the estate?—That is what I should like to see, but what I am afraid of myself, is that they must relieve all congestion first, as the Board have no power to do anything else.

51346. But when the congestion on an estate is relieved, you think that in distributing any land left over the sons of tenants on the estate should have priority over uneconomic holders on surrounding estates?—I think they ought to have, as a matter of justice.

51347. How would you select the tenants' sons?—I would find out the tenants who were able to start their sons, and give it to those sons who wanted it, who were not in the habit of going away, but were living on the land.

51348. As you are going to give the advantages of new farms to tenants' sons, would you ask the tenants' sons to pay any fine?—I would not.

51349. Why?—Because it is not allowed to be done on entailed estates. It is illegal on entailed estates to demand a fine.

51350. I assume that the estate has been acquired by the Congested Districts Board?—I thought you meant that the landlord was going to divide it up.

51351. I am taking your answer to apply entirely to land that ceases to be in the landlord's hands and has become the property of the Congested Districts Board. Take the case in which the Board has bought property and relieved congestion on the estate, and has a balance of land over. According to your policy the Board ought to plant tenants' sons on that balance of land. I ask you can you show me on what ground, or in what way, you would make a selection of the tenants' sons?—I would find those who were best fitted for it. They would find that out just in the same way as they find out the value of the land.

51352. Having done that to the land in the hands of the Congested Districts Board, would you allow the Congested Districts Board to sell that land to tenants' sons, or would you expect them to put in tenants' sons and give them the occupation rights without any repayment at all?—I would sell the farms entirely to them if they wished; but I believe by law they cannot do it, because they are obliged to keep a certain percentage.

I assume the Congested Districts Board to be proprietors and to have the power, and I understand your answer to be that the Board should sell just the same as any other tenant on it.

51354. That would be the selection?—Yes.

51355. By competition prices?—Exactly.

51356. Sir Francis Mowatt.—You have told us, I think, that the primary object of the Board was the relief of congestion; that the main thing to be done with land was to divide it so as to put an end to that evil of congestion; that first of all the uneconomic holdings on an estate should be rendered economic; that, secondly, the uneconomic holdings in the neighbourhood of that estate should, out of the balance of land available, be made economic, and then, and then only, should any remaining balance be applied to granting holdings to tenants' sons?—I think there is a slight misunderstanding. What I meant to convey was that all the congests from the district should not be put in here. Some might be sent to Roscommon, and some to other places, so as to leave room for sons of tenants to get some land.

51357. But they should be given land somewhere, and then only should the tenants' sons get the land?—Yes. Mr. Doran has laid down a fair principle for estimating the value of grass land, recognising, as he does, that the landlord is possessed of what has been called the dual interest; and if his principle worked out in practice to the extent of giving the landlord the value of both such interests all difficulties would be removed. The difficulty, however lies in giving absolute effect to the principle, and, in order to do so, the grazing rental, less actual estate outgoings, should be taken at least as the basis of compensation.

51358. Sir Antony MacDonnell.—Did Mr. Doran state that in evidence or in conversation?—In evidence. It was read out to me as being his evidence.

51359. That principle is at variance, as I understand, with the principle that you have accepted?—No, I think it is exactly the same.

51360. I understood you to say that the fair basis of price should be the net income of the landlord?—Yes.

51361. The net income capitalised at a fair rate of interest?—Exactly.

51362. You mentioned 3½ per cent. That is a perfectly clear and practicable way of doing things, except perhaps in a few instances, as Sir John Colomb pointed out, where things dovetail into one another. But here you meet with a mixture of two principles. You say, in the first place, you value the landlord's interest in the lands as distinct from that of the tenant, and then you add to that the tenant's interest. If the land is altogether in the landlord's hands it is perfectly impossible to ascertain what the tenant's interest is. The tenant has never held that land; he has never been on that land. It is a pure conception of the mind?—That is what it is.

51363. Then, in getting at your value in this way, you cannot have any reference to concrete facts?—You may look at it this way, that the actual rent of the land shows both the landlord's interest and the tenant's interest in it, because the value is what it will fetch in the open market.

51364. You assume that when a landlord is in possession of grass land he represents a dual character, the character of a tenant and that of a landlord?—He does.

51365. That is really a figment?—Yes.

51366. But, if you practically state that the price should be based on net income the whole matter of dispute afterwards is the rate of interest on which it should be capitalised?—Yes, and another dispute may arise as to what is net income.

51367. We understand net income to be what he receives over a series of years, in which the arrears were discounted, after the estate expenses have been deducted?—Exactly.

51368. I think these expenses were taken as ten per cent. at the Land Conference which preceded the Act of 1903. This method of ascertaining the value of land by ascertaining what is the landlord's interest and what is the tenant's interest cannot be correctly

Sept. 2, 1907.

Sir Henry Lynch Blosse.

worked unless there is a tenant in occupation?—That is correct. It would not be an eleven months tenant. The tenant should be in occupation.

51369. Sir FRANCIS MOWATT.—Do you suggest that the grazing rental received by the landlord is the basis on which compensation should be calculated?—Yes.

51370. Mr. SUTHERLAND.—How have these rentals moved in recent years?—There is no trouble in estimating them in any case, and the same value is being paid. I do not let my grass lands, as some people do, by auction. The same tenants have held them for years and years, only they clear out at the time.

51371. It has not been at the same rent?—It has been the same rent, as a matter of fact, for years.

51372. You don't know what the general movement is?—That I cannot tell you, because I don't repeat them very often.

51373. Do you admit that the rents are decreasing now, as compared with some years past?—No. I don't hear other landlords in the county complaining. It may be so up in the midland counties. Of course you know that for some of the land they get no rent at all, in places where they have the cattle driving and these little bits of amusement.

51374. I am not talking of these things which occur only once in a blue moon, but of every-day experience?—These occur nearly every day in certain parts of the country. But between these and blowing up houses with bombs——

51375. What would the rent be two years ago?—About the same as now.

51376. It has not fallen the same as the price of land?—And that has not fallen, except officially, and with an object.

51377. Do you mean to say that the landlords of Ireland can put up or down the value of land in Ireland?—The tenants will put it down, with the assistance of the Estates Commissioners.

51378. The landlord takes what he gets?—Yes.

51379. Sir JOHN COLOMB.—The estate books will show the general tendency on that particular estate?—Yes.

51380. Mr. BRYCE.—Is not there a deterioration of grazing lands going on all over the country?—I don't think there is.

51381. There is very little being put into them?—There is a great deal of drainage done, and other things to improve them.

51382. You say, speaking generally, the grazing lands are not deteriorating?—I don't think they are, taking them all round. Of course a certain amount of land is running back into rishes, and that class of thing, through lack of drainage; but I think the majority of it is keeping very good sheep. You can see it yourself, driving along the roads, quite plainly. If the effect of any deal be to give the owner his net income, *i.e.*, his rental, less by estate outgoings, the questions in controversy could be readily solved, and, where any dispute arose as to income, then an appeal should lie to some independent tribunal. An appeal would become unnecessary where income, as defined by me, was made the basis of compensation; but the appeal should surely be open where any *bona fide* dispute arose as to what constitutes net income, as herein defined, in any individual case. I look upon an appeal as an absolute essential, in the interests of justice, because it would allow all sides to be heard, and the figures and facts should be publicly disclosed. Nothing could be more unsatisfactory than the present system, by which the buyer fixes the price for all practical purposes, and the landlord has not access to the report of the inspectors and valuers engaged to make out the estimate. No opportunity is afforded the owner of putting questions to the valuers, or of correcting any error into which they may have fallen. For an appeal I would suggest a Judge of the High Court in Dublin.

51383. Sir ANTONY MACDONNELL.—When you speak of an appeal, do you refer to such a case as this? Suppose the Congested Districts Board were dealing with you, and you could not calculate the net income, and the Board said, "We will take the net income to be £3,500 a year," and you said, "No; my net income is £4,000 a year"?—Exactly.

51384. Your appeal is on the basis of compulsion that is to say if compulsion is applied there should be an appeal, but if there was no compulsion it would be a matter of dealing with the party?—Yes. In what I have said, I assume that compulsion has been made law.

51385. Mr. SUTHERLAND.—You are willing to accept the new machinery?—No; nothing at all with assessors sitting.

51386. Sir ANTONY MACDONNELL.—There are no assessors?—I understood that in the new Act there were to be two assessors sitting with Judge Wylie.

It was proposed, but not accepted.

51388. Mr. BRYCE.—There is a valuer?—That is what I mean by an assessor, like the County Court Judge.

51389. Mr. SUTHERLAND.—Would you accept that?—No; I would sooner see three judges sitting together to form a proper court of appeal. Of course, it will stand entirely on the class of men whom you appoint as valuer. If you were appointing a politician on either side I would object to him strongly.

51390. Sir JOHN COLOMB.—Assuming Parliament to adopt the policy you have indicated to this Commission, that is, the acquirement of lands on the basis of net income, do you consider that the landlord under those circumstances would be so willing to sell that, though the power of compulsion might be in existence, its exercise would be comparatively rare?—I think that it would not be used at all, except it was done in a dishonest way without an appeal.

51391. Assuming that the principle you advocate here were embodied in an Act of Parliament and became law, do you or do you not believe that the power of compulsion would not have to be exercised often?—I believe it would not.

51392. Do you think that the landlords would regard such an arrangement as equitable, and would be willing to assist the Government, provided they did not lose, and that it is only in the case of eccentric persons and cranks that the power of compulsion would then have to be used?—Yes.

51393. If that policy were adopted and embodied in an Act of Parliament by the Government in power you would have no fear of compulsion?—No. I think compulsion a mistake in any place. It is never satisfactory in its results, no matter who uses it or what it is used for.

51394. Sir ANTONY MACDONNELL.—You say that the present system of fixing prices is unsatisfactory, as the buyer fixes the price. The landlord has no access to the report of the inspectors, and has no opportunity of questioning the valuers and correcting errors into which they may have fallen. Does that refer to the existing practice of the Congested Districts Board?—Not only that, but to the Estates Commissioners.

51395. But it is a matter of purely voluntary arrangement with these parties for the sale of a particular estate?—My statement was entirely on the assumption that compulsory powers would be granted to the Board.

Rev. JOHN M'DONNELL examined.

Rev. John M'Donnell.

51396. Sir FRANCIS MOWATT.—You represent the National Directory of the United Irish League?—Yes. It is three miles from here. I had intended to lay before you some statistics, but these are not necessary now, as they have been given already by other witnesses. From these figures, as well as from the fact that upwards of 50 per cent. of the male population between the ages of twenty and sixty are migratory labourers, and with 7,095 holdings under £8 valuation, it is clear that periodic distress is certain to arise owing to bad seasons. Besides, it is well known that owing to machinery and other causes the earnings in England are not now one-third what they used to be.

51397. What would you say is the average sum which a migratory labourer brings back at the end of his English migration?—We should divide them into different classes to arrive at that. Portion of our labourers go just for the hay-saving alone. They

re generally away for a month or six weeks, and when they return they bring home about £6.

51398. You think that they used to earn more?—Not much at the hay-saving; but a lot of our labourers who now have to come home when the hay is saved, used to earn a good deal more by waiting for the harvest later on.

51399. Do they come back sooner now because they cannot get work if they wait, or because they prefer to come?—They cannot get work. That is the chief reason.

51400. Is the number of migratory labourers decreasing?—The earnings are decreasing, because the time is shorter now than it used to be in England. The introduction of machinery has caused a great decrease of labour in England.

51401. Sir JOHN COLOMB.—The period during which they are away has become lessened?—Yes.

51402. They are not so long away?—They are not so long away at present. As a result, many of our boys are leaving England this year, and for the last few years, and going to America. Even the heads of families are going with their sons and daughters. This year from my own parish six heads of families went with some of their children to America, and the children are leaving England to go to America.

51403. Sir FRANCIS MOWATT.—What happens the holdings of tenants when they and their families go?—The entire family don't go. In the cases I refer to, perhaps a son or daughter, or more, are left at home with the mother.

51404. The father migrates, and the son remains in possession of the holding?—Sometimes the father and son go to America; sometimes the father and daughter go. This year six heads of families left my parish with other members of the family for America. All these heads of families used to go to England in times gone by; but England is now so bad that they are going to America instead.

51405. Sir ANTONY MACDONNELL.—Are they going permanently to America?—Not permanently; but to earn what they used to earn in England.

51406. Do they come back from America?—I have got much experience up to the present. I am afraid that very many of them won't. Some of them will.

51407. The cost of travelling to America and back will be very great?—Yes; but the earnings have so decreased in England that really it was not worth their while to go to England at all, because they could only spend a very short time there. In twenty-five years 20 families have left the parish, mostly by eviction. These lands are mostly in the hands of the owners, except a few that have been handed over to planters, without a penny compensation or fine. In these cases no compensation whatever was given to the tenant on leaving. In some cases they were evicted, not for non-payment of rent, but simply to make a farm for the owner. There are two or three instances of that in my parish.

51408. Sir JOHN COLOMB.—Not since the Act of 1881?—Within the past twenty-five years.

51409. Mr. SUTHERLAND.—Subsequent to the Act of 1881 the landlord could not have evicted the tenants without compensation. He had powers of resumption for certain purposes?—The cases I refer to occurred before 1881. Government after Government has been forced owing to the poverty of the Swinford Union to adopt means of saving the people's lives whenever, owing to bad seasons, their potato crops failed, but it is our experience of the past that any remedial measures adopted by the Government were generally too late and subjected the poor they were supposed to relieve to hardship and demoralisation without effecting much in the way of permanent good, while the administration was simply an enormous waste of public funds.

51410. Sir ANTONY MACDONNELL.—To what period do these remarks apply?—To all periods that I am acquainted with during the last twenty-five years.

51411. Do they apply to the period since the passing of the Local Government Act?—For the past twenty years in my experience.

51412. Another state of things has been produced by the Local Government Act?—I would make an exception of this particular time.

51413. Since the passing of the Local Government Act the administration has been all left in the hands of the local bodies, so that if you complain of administration in recent years your criticisms would apply more to the local bodies—boards of guardians and county councils, than to the Government?—My criticisms refer to the time before the local control of the administration of the Relief Acts was established.

51414. You know that under the Local Government Act responsibility for relief rests first on the guardians, and in the second place on the county council?—Yes.

51415. And that if the cost increases to more than the rate ought to be the Government comes to relieve it?—Yes. My remarks do not refer particularly to the last two occasions.

51416. You admit that on the last two occasions the demoralising tendency was not observable?—Yes. I refer to the time prior to the passing of the Local Government Act. The present year's administration of the Relief Act, as far as it went, is exceptional to our former experience, with the result that many substantial works of permanent utility have been done, with practically very little expense of administration. This different result is due to the fact that the scheme was made locally. The people have had a voice in selecting the most useful works, and this has made it their interest to see that a fair day's work is done. The failure of former remedial measures was due to the fact that the people were not consulted as to the most useful works, and had no voice in the administration of the money. While the present condition of things in Swinford Union lasts, we must always be prepared for recurring periods of distress in bad seasons, and any scheme, no matter how well conceived, of dealing temporarily with the evil, is only tinkering with it. To deal effectively with it the grass lands must be divided, and the people's holdings made economic, so that they may not have to depend upon any uncertain external aid, such as from England or America. There are vast grazing tracts around Swinford Union which once belonged to it, and from which the poor people were evicted. These lands should now be given back to the union again. There is £3,842 worth of land in the union in the hands of thirty-nine graziers and fourteen owners; and used mostly for grazing purposes. Migration of some young, thrifty families, as far as possible from the same locality, should be encouraged. To do this, a fair compensation should be allowed them for what they give up, and a reasonable value put upon their new takes, according to the locality, and not above their new neighbours. I know a few already in my parish who would gladly migrate on these conditions, but, naturally, no board can deal with isolated cases of the kind. There are about 1,300 acres of grass lands non-residential holdings, in Killasser, at a valuation of £500; 100 under £3; 500 under £5; 200 under £10. On Joynt's Estate there are 150 tenants, 110 of which are under £5 valuation. There is a grazing farm beside these tenants from which the tenants were evicted and sent to the mountain and rocks, and some, not for arrears of rent, but to make a farm. This farm, of 134 acres 2 roods 7 perches, is valued at £63 10*s.*, while Pat Hughes, an evicted tenant, for 15 acres is valued at £5 5*s.*, for mountain, and Bryan M'Nulty, for 43 acres, is valued at £15 3*s.* I mention these facts to show the unequal nature of the valuation—the bad lands on the mountain being valued almost as high as this grazing farm. Within four miles of these uneconomic holdings there are a few square miles of the best grazing lands in Straide. Some families should be migrated from Callow to these grazing ranches, and, as there is no meadow land at Callow, a quantity of this grazing land should be purchased as a meadow for Callow tenants, and some also for the purpose of grazing some of their young stock. They have at present to go five miles for meadowing, and buy it at auction prices, while, if land were made available for them on the same estate on which they are tenants, they could get a portion of that meadow much cheaper than they can get meadow at present, and it would be much nearer to their homes.

51417. Sir FRANCIS MOWATT.—You desire that the grazing and untenanted land in your district should be purchased, by agreement, if possible, or otherwise compulsorily, and divided among the small holdings of the district, so as to make them economic?—Yes. Besides the migration of tenants, a system of drainage should be adopted. The land is perished for want of drainage; the pastures are ruined by floods; the people's hay is carried away, and it is well known

Sept. 2, 1907.

Rev. John M'Donnell,

that the deposit left on pastures after floods is ruinous to cattle and sheep, and no one who knows will buy these sheep or cattle at a fair.

51418. Sir ANTONY MACDONNELL.—Have you worked out any administrative scheme of drainage. You know how the law stands at present. Would you regard the existing system of drainage boards as applicable to small holdings?—I should say that, in the first instance, some body like the Congested Districts Board, or some body similarly constituted, should have power to deal with the drainage of large rivers—main drainage.

51419. You would give a body like the Congested Districts Board power to initiate great drainage schemes, and to enter upon land both in their possession and in other people's possession, with the object of carrying out such schemes?—Yes; that is necessary.

51420. Is it your opinion that such a thing as that could not be managed by the county council?—I have never gone into details, but some drainage board should be established to deal with the rivers.

51421. Would you have any objection to such a board imposing a rent, according to the benefits conferred on the lands drained?—The people themselves would be quite willing to bear a portion of the taxes, if that were necessary. They would be very glad to contribute a portion in the way of taxation.

51422. Where would the balance come from? Say that the drainage scheme for a tract of country would cost £100,000, and would benefit 40,000 acres, would you impose the whole cost of the drainage scheme on the land benefited, or only portion of it?—Only a portion of it.

51423. From what source would you get the balance?—I think that the Government should find some funds to remedy many of those evils. We need not look to the owners, who have never, with a few exceptions, shown the least interest in the people's wants. They have blocked land purchase throughout the Swinford Union. They have made it impracticable, except in a few cases, and some of these are already known to be bad bargains. I mention this as showing why it is that since the passing of the Land Act of 1903 we have made so few purchases, and these we have made are not by any means very satisfactory. It has been said that the people have prevented the working of the Land Act of 1903. As against that, I wish to point out that, shortly after its passage, the Guardians of the Swinford Union, by unanimous resolution, wrote to every owner of land in the union stating that the people wished to purchase under the Act, and asking them to state their prices. Many did not condescend to reply. Others abused the guardians for daring to ask them to sell, while the reply from others, as if it was by arrangement, was that they did not wish to sever the friendly relations that always existed between their families and the tenants; and this was said, although we know that the relations in a great many of these cases were not by any means friendly. But, when it came to a question of price, we got none of them to ask prices less than from 21½ to 24½ years' purchase. Before the Act some of these very estates were offered from 16 to 19 years' purchase.

51424. Sir FRANCIS MOWATT.—Nineteen years' purchase of second term rents?—Yes.

51425. Sir JOHN COLOMB.—Was it second term rents in both cases?—In the case of the 19 years it was mostly first term rents; in the case of the 16 it was all second term. It was offered at 16, and is now offered at 21½ years' purchase. I have the name of the estate, but it is not necessary to go into it.

51426. Most Rev. Dr. O'DONNELL.—It is exactly the same estate which was to have been sold for 16 years' purchase, and for which they are now asking 21½ years' purchase?—Yes.

51427. Sir FRANCIS MOWATT.—Why was not the sale completed when the offer of 16 years' purchase was made?—The tenants did not consider themselves justified in giving this price, because on an adjoining estate, on which 15 years' purchase was agreed to by the tenants, the Land Commission would not sanction the advance. Then the price was reduced, and the estate was sold for from 11 to 12 years purchase, and the tenants on this other estate could not see their way to pay 16 years' purchase, when their neighbours were buying at 11 or 12.

51428. Sir ANTONY MACDONNELL.—And now it is being given for 21?—Yes; it is being negotiated. This property that was offered for 19 years' purchase before the Land Act of 1903 is now being negotiated at 21 and 23 years' purchase. The Congested Districts Board were asked to purchase it, but they consider the price fixed with the tenants too high by three or four years, because the place was very much in arrears at the time. That was the reason why such a high price was consented to by the tenants. I daresay there would be an average of four years' arrears on the property. The landlord wiped out the current year's rent with the running gale. The year the negotiations were entered into was a bad one, and the effect of making these remissions in a bad year was no doubt the reason that they consented to the price.

51429. Sir JOHN COLOMB.—What was the year that the 16 years' purchase was asked?—It was before my time in the locality; but I can find out very easily. I am seven years there.

51430. You are aware that the landlords were then paid in stock, which stood perhaps at 112 in the market; so that a landlord who sold for £100 was really getting £112?—Yes.

51431. Then the tenant was to pay four per cent. annuity on the purchase price when the offer of 16 years' purchase was made?—Yes.

51432. Take a £10 holding on the estate. If the tenant gave 16 years' purchase his annuity would be £6 8*s*., when he had to pay 4 per cent., whereas he can now give 19½ years' purchase and still pay an annuity which is less than the other one by two shillings. Do the tenants realise that?—Yes.

51433. Most Rev. Dr. O'DONNELL.—Would not you say that that was one of the dangers of the 1903 Act?—Yes.

51434. That extension of the annuity induces the tenant to give a larger number of years' purchase?—Yes.

51435. That is the practical effect of having the annuity going on for 68½ years instead of 49 years?—Yes. That is one of the dangers. Only two estates have been purchased under the Act of 1903 in my district, and the Estates Commissioners are dealing with each of these two cases. Having witnessed the dangers of direct purchase, owing to turbary rights, passages and boundaries, etc., in the Brett and Lynch Estates, and the endless law-proceedings arising therefrom, the people were naturally anxious to shun direct purchase, and to buy only through the Congested Districts Board or Estates Commissioners; but rarely can we find any owner willing to sell to either. Some of them say—"See how Sir Antony MacDonnell said he would not sell to his own Board, and why ask us"? In almost every case we have said to the owner—"We will agree to any price fixed by the Board or Commissioners," but the price should be fixed beforehand. Those who have purchased direct are now beginning to see they have deprived themselves of the improvements to their houses and lands that have been so extensively carried out by the Board on their estates. As already stated, the landlords of these districts, with a few exceptions, have never shown any sympathy with the tenants, or helped them in bad years by a reduction of rent, or even given them time to make sale of their stock. On the contrary, they pursued a system of persecution, such as processing for even the hanging gale the day after it fell due, though the case could not be heard for months; and serving writs if the rents were high.

51436. Sir JOHN COLOMB.—When you speak of landlords in that sense do you mean landlords in your parish, or generally all over Ireland?—My own district.

51437. Sir FRANCIS MOWATT.—That can hardly apply to an estate on which some years' arrears have been allowed to accrue. They were not turned out immediately on the rent becoming due?—No; I mentioned exceptions. I stated there were a few exceptions to that, even in my district. That is one of the exceptions too where the landlord treated his tenants very decently. I may mention his name—Mr. Orme. I may mention also that in some cases in which the landlords were disposed to treat the tenants fairly their efforts were frustrated by the agents. I refer particularly to the case of Sir Roger Palmer, who sends a few pounds every year to the poorest of his tenants. It meant £1 to each poor tenant. To get it one tenant was required to walk forty miles. That was never intended, I believe, by the landlord.

51438. Was that brought to the landlord's notice?—The landlord sent it to his agent.

51439. Did you, knowing that, bring it under the ndlord's notice?—No, I did not.

51440. Did anybody, to your knowledge, bring it to ne landlord's notice?—Not that I am aware of.

51441. Sir FRANCIS MOWATT.—What was the object the agent in making the man walk forty miles?—cannot understand it; but I can vouch for the ict.

51442. Sir ANTONY MACDONNELL.—Is it of regular currence, or has it happened only on a few casions?—It occurs almost every year. He sends a w pounds to the agent each year; and some of the ry old tenants have to walk forty miles—twenty iles there and twenty miles back—to get the money.

51443. That is to the estate office?—Yes.

51444. Most Rev. Dr. O'DONNELL.—Do they pay nt on that occasion?—No; generally they fix an fice nearer, at a much more convenient place. In nother instance where the mother of the family died, aving a weak little family, the agent evicted them wice, and threw down the house the second time, lest ey should go back.

51445. Sir JOHN COLOMB.—Was the tenant evicted id then restored?—He was allowed back on payment a certain sum, rent and costs.

51446. He got into arrears again?—Yes, and was icted the second time. The reason was the old man as over seventy years of age. He went to England r some forty years. For those years he paid his nt direct to the agent. Then he became unable to to England, and unable to earn the rent, and he as evicted. He went back, of a winter's day, to the elter of his old house, and was sent to gaol for three onths, at that great age—between seventy and ghty.

51447. Sir FRANCIS MOWATT.—I think we shall be tisfied with the examples you have given us of the nduct of that agent. Perhaps you will now come the dealings of the Department of Agriculture, and en to the Congested Districts Board?—Very well. just wish to mention that it is not for the purpose reviving bitter feelings that I refer to these things, it is not a pleasant thing to touch on, but simply impress upon you the view that I have, that the nants in these cases will gladly give a few years' rchase more than the value of the land simply to rid of that system. I hold strongly on that point, id I know they would do it. For that reason I state ere should be some power vested in some body to event that state of things—that is to prevent a nant giving, for any reason he likes, a price that won't be able to pay later on.

51448. The Congested Districts Board, for instance, ould not purchase at a price which, when converted to an annuity, the tenants could not pay?—Yes. he Congested Districts Board have purchased in my rish only one estate, and that a small estate with enty-six tenants. Notwithstanding the smallness the estate, the Board have done a wonderful lot in e way of drainage and accommodation roads, id other such improvements, and the building of new ouses; and where they have not built new houses ey have put slated roofs on the old houses. Though ey have made wonderful improvements on this small tate, naturally their operations were hampered, as ere are no grass lands on the estate. It was a ry congested estate—sixteen of the tenants being der £5 valuation. Almost side by side with this me estate is a grazing farm valued at £64 5s. The rner has refused to sell this grazing farm; and eight even his own tenants are valued at under £2. Such state of things naturally hampers the operations of e Board, and prevents improvements on a large ale, such as drainage and roads on a large scale, d an economic division of bogs, and there is a waste expenditure, owing to their being confined to one olated estate. To enable the Board to effect improve-nts on a large and economic scale, they should have wer to purchase, on a large scale, a number of joining estates and this leads to compulsion. Not-thstanding this and many other difficulties, the oard have done much wherever they have operated as the Dillon Estate, with which I am well acquainted. knew Charlestown and Kilmovee long before the oard commenced their works there, and I have to y that the whole face of the country is changed by ainage, making of accommodation roads, and the ilding of new houses. If the Board did nothing more than improve the sanitary conditions under which the people lived, they would have done much to stay the ravages of consumption, to which too much attention cannot be attached, when we consider that more die of consumption of late than from all other known epidemics. Besides the material improvements effected by the Board, they seem to have infused into the people a spirit of improvement and emulation and thrift through their parish committee schemes. The pity is that their grants are so small. For small grants six times, and in some cases ten times the value has been given, and this at a cost of 15 per cent. of the actual grant, or 3 per cent., if we consider the value of the work done, which should in reality be considered. Its educational effect upon the people is surprising. This scheme is certainly the best that has ever been introduced into the country, and has produced the best results. Hitherto improvements meant increased rents and increased taxation. This scheme was the first ray of hope held out to the people that improvements would be for their own good. The people were associated with the scheme and made to feel that it was in their interest that the work was done. The people's wishes were consulted, and their suggestions were adopted, and this, I believe, is the secret of its success. Their rules were not cast iron rules. At first there was a reasonable latitude allowed, and, as the scheme worked and the people became better acquainted with it, then, as it became necessary, more exactness was required. With more funds, and the operations of the parish committees extended, the homes of the people would, in a few years more, be made quite comfortable, and the land, with proper draining, manuring, and variety of crops, could be made to yield double its present produce. More land would be cultivated, and this would enable the young men to stay at home. To the parish committees might be given the moneys necessary for relief of periodic distress, and this course would ensure useful and reproductive work, without the demoralising results of our past experiences. I should also wish to see the parish committees in some way associated with the schemes handed over by the Board to the Agricultural Department, viz., cattle, horses, pigs, and poultry. The same cannot be said of their pigs, and poultry, spraying and manuring, and seeds. The Board did much to improve the breeds of cattle, pigs, and poultry. The same cannot be said of their efforts in improving the breed of horses, which certainly had very bad results. Whatever may be said of the Department's efforts elsewhere, they have done little in the Swinford Union for the funds at their disposal. They have barely touched the schemes handed over to them, and not with as good effect as even the Board, who received no subsidy from the rates. They received £1,200, or £1,300 yearly from the county rates alone. The Board distributed bulls at a moderate price—£12, £15, or £20 each. The Department charge £40. I mention this as having occurred in this district last year. That may not be the price in every case.

51449. The price of good bulls has greatly increased during the last three years. In Scotland what used to go for £20 now goes for from £60 to £80?—I admit that the price has varied. My point is that the Department should change the system of giving premiums. They should reduce the initial price to the purchasers. They have not the £40. It is a prohibitive price for poor persons, and we had to abandon buying them. We are anxious to improve the breed of cattle, but had to abandon it owing to the prohibitive prices. If they changed the system and reduced the prices and the premiums, it would be a great improvement. With reference to pigs, the Department have carried on the scheme much on the lines of the Board, and it is fairly satisfactory, and the same may be said of the poultry scheme, in which they have just acted on the lines of the Board; but I hold that they stop short at a very important point in each, viz., the market for each. The breed of pigs and poultry is certainly improved, but still the people are at the mercy of the buyer. Slaughter houses should be established at convenient centres. The Department could regulate the market, and much of the offal could be made available for the seller that is now lost to him. The same applies to eggs and chickens. The Department should get a market, and regulate, as far as possible, the railway rates, which are at present excessive. Then the Department have not done anything around here in the matter of butter or creameries. The people are timid of creameries, and

Sept. 2, 1907. — Rev. John M'Donnell,

no wonder, as heretofore when the rents were being fixed one of the questions asked was if the holding was in the locality of a creamery. That had its manifest effect on the people. They were suspicious of creameries for that reason. For my part, though I admit people receive more from creameries than otherwise for their butter, I do not care for them, and for the following reasons:—The people, on an average, have only two cows, in the Swinford Union, and not good ones at that. I do not think 3*d.* a gallon for milk a fair price, if we take into account the time, the expense of sending it, the want of butter at home, the want to children of sweet milk, and even buttermilk, which is admittedly healthy, as the children will not get enough sweet milk in creamery districts, I believe. Besides, in a few years, the young girls will not know how to make butter, and these are to be the wives of the Irish farmers in future. When each farmer will have a nice dairy, which is encouraged by the parish schemes of the Congested Districts Board, and a proper training as to the treatment of his cattle and milk, etc. I would much prefer what we may call a "Butter Factory," in a convenient centre, at which each will receive the price of his butter, according to its quality, as in Canada, where at one time, if butter is cheap, they make cheese instead, if it pays better. This would keep our girls at home, and fit them for the lives of good house-keepers afterwards. I know there are many objections, but all these can be done away with in time, by encouragement of prizes. With all these things I would wish to associate the parish committees, but shall not go into detail further than saying if the Board or Department, or whatever body takes charge of these industries, would send up an intelligent member of the parish committee to Glasnevin for six weeks or so, and an intelligent farmer's daughter from each parish, you will get better results at a much less cost than you can ever hope for from the Department's itinerant instructors. I may tell you the people I am acquainted with do not believe in them; and, like the parish committee scheme, you must associate the people themselves with the scheme. I may now refer to spraying. It is the great necessity of the locality. Up to this the Department have done nothing for Swinford. Though they were approached last summer twelve months, in the year 1906, to bring machines and sell them at the price the Board offered to sell them at, namely, 24*s.*, they stated they had no funds at their disposal. After a fight, they have done it this year. They have sold them for 24*s.* this year. They were supposed to give examples in spraying. They have, I understand, sprayed, but they sprayed only the example plots that they selected themselves, for some seed potatoes, and some along the road in particular districts. Somebody, whether it be the Department or the Congested Districts Board, through the parish committees, should see that no sale of spraying material should be allowed without a guarantee as to purity, and they should have samples taken for analysis. People will naturally be induced to purchase a cheaper article if they have not good grounds for believing that it is an inferior article and somebody should have the power of preventing the sale of inferior spraying material to the people. I come now to the question of bogs in connection with the Congested Districts Board and the Estates Commissioners. We have perhaps 1,700 acres of deep bog in this district alone. One owner has 820 acres of bog, and he is very careful of it. I should wish to see all surplus bogs taken over by some body, such as the Congested Districts Board or the Estates Commissioners, for the people's benefit, as an ample supply of turbary for the people is a serious question for the future. And that is one of the reasons why direct sales should not be encouraged among our people, because the question of turbary will be a very unsettled one. It has given rise already, to my own knowledge, in my own district, to serious litigation. After allotting to each purchaser certain turbary, the rest should be vested in some body, such as the Congested Districts Board or the Estates Commissioners, for the general use. A serious question in connection with the bogs arises in this way. While the 820 acres of bog to which I have referred are valued at only a few shillings, the owner is selling these bogs, and making sometimes £2 and £3 an acre, and up to £7 an acre for this bog. This is a serious question for the ratepayers of the locality, and one that the district and county councils will have to deal with. The only other matter I wish to refer to is that the waste mountain lands should be planted, as they are almost useless for anything else.

51450. Mr. Bryce.—Won't it be difficult to get the people to give up their grazing rights on the mountains to be planted?—I refer to mountains that are already in the owner's hands—the waste mountains.

51451. That have not been sold to tenants yet?—The tenants have no claim to the mountains that I refer to.

51452. In order to carry out a comprehensive scheme you might want to have mountains on which tenants had got pasturage rights; how are you going to get rid of those?—That would not be any great inconvenience, to my mind, because the portion that they would have grazing rights on might be eliminated from the scheme of planting. That would be an easy way out of the difficulty, though I don't think myself that the people would have any objection to these places being planted if it were explained to them.

51453. What was the small congested estate you spoke of as being purchased?—The M'Carrick Estate.

Mr. Patrick Finn examined.

Mr. Patrick Finn.

51454. Sir Francis Mowatt.—Are you a farmer?—Yes. I reside at Cloontia, Ballaghadereen. I have seven or eight acres of bogland. My valuation is £1 18*s.* The place has been sold to the Land Commission since 1904. The annuity is £1 8*s.* In Cloontia, which belonged to Jonathan Rashleigh, of Cornwall, England, up to December, 1904, and is now in the possession of the Irish Land Commission, there are 140 holdings, ranging in area from four to ten acres each of reclaimed bog, the valuation of the majority of them being less than £2. There is no grazing or untenanted land available on the property for the purpose of enlarging these holdings, but there are large tracts of it in other parts of Mayo and in County Roscommon, to which half these tenants could be sent, and by dividing their holdings amongst the remaining tenants their condition would be much improved. Failing the adoption of this course, there are several thousand acres of shaking bog which could be drained, provided with proper roads through it, and reclaimed, which would add considerably to the present holdings, provided that the tenants got financial assistance from the Government to enable them to do this.

51455. You mean that they could reclaim the lands?—The tenants themselves could reclaim the lands if they got financial assistance.

51456. They would reclaim it by their own labour?—Yes.

51457. Then what would you call financial assistance: do you mean that if the Government would pay them while they were doing it they could reclaim their own land?—They should pay them so much an acre if they reclaimed it.

51458. Sir Antony MacDonnell.—The land being their own?—Yes, the bog being their own, and they reclaiming it and getting financial assistance.

51459. Is the land to be reclaimed to be the property of the tenants?—Yes.

51460. So that the reclamation is their own property?—Yes.

51461. You think that the Government ought to assist them to do that?—Yes. It would be a means of enlarging the holdings.

51462. Sir Francis Mowatt.—You say that these holdings are from four to ten acres each, yet there are thousands of acres of bog which belong to the tenants. They cannot be in their holdings if the holdings are from four to ten acres each?—They are not measured into their holdings. They are commons.

51463. How do they belong to the tenants?—They expect them to be divided among them.

51464. They are not theirs now?—They have acres of bog measured into some of the holdings at present.

51465. But all this additional bogland does not be-ng to the tenants now?—I don't know whom it uld belong to if it would not.

51466. Most Rev. Dr. O'Donnell.—What rights uld they have on the bog at present?—They have there all to themselves.

51467. Do they graze their cattle on the bog?—s.

51468. Perhaps you will say that if a public de-rtment advances money to a tenant to reclaim his the tenant will, when he is buying out, pay a ger annuity because of the reclamation, and in t way pay back the money expended on the bog? They would be badly able to pay back anything.

51469. Suppose a public department advances ney to a man who has a big tract of bogland to able him to drain that bogland and prepare the gland for reclamation, does not the bogland be-ne much more valuable than it was before?—Cer-nly.

51470. When he has got that land reclaimed, you rself put it to the Commission, he is very much the position of a man who has got an enlarged ding?—That is right.

51471. If that be so, is not it a fact that he could y something by way of instalment to the public ly that advances him the money to do the drainage l the reclamation?—It would be worth his while.

51472. Don't you think he ought to do it?—I do. have every confidence in the Congested Districts ard and the Parish Committees and their admin-ation, the only obstacle to their proper working ng that they have not sufficient funds at their dis-al. The grants they make are, in consequence, y small, and we are unable to pay the remainder the expenses which the improvements we are so ch in need of would incur. That is a great draw-k to a man who goes building and gets a grant m the Parish Committee of say £2 for an out-se which will cost him £10. That man, induced his grant, will start building, and by the time he finished he is £8 in debt.

51473. Sir Francis Mowatt.—He borrows the rest the money?—Yes, or he buys the stuff from mer-nts on credit.

51474. Sir John Colomb.—The grant he gets from Parish Committee is generally to purchase ma-ials?—Yes.

51475. The rest of the work is really a matter of our?—It is.

51476. It is the tenant does the labour for his own vantage; is not that so?—Yes.

51477. Therefore really he is getting payment for labour?—He is.

51478. Sir Francis Mowatt.—What does he use money for?—Galvanised iron, timber, and the son's work, which all cost a good deal.

51479. Sir Antony MacDonnell.—Does he usually ploy additional labour?—As a rule he is able to do himself if he has any help at all. Where he has he has to employ labour.

51480. He has to pay for that?—He has.

51481. Sir Francis Mowatt.—You have described rself as a farmer, with seven acres and 2 roods of d at £1 11s. rent. You must have other means living besides farming?—Yes; money coming m England.

51482. Don't you do any labour?—I work on the ding.

51483. Don't you also work for other people?—To n money from them?

51484. Yes?—Occasionally.

51485. Is that your only means of living, in addi-n to money coming from relatives and friends oad—what you can make out of your holding, h its rental of £1 11s.?—Yes.

51486. From whom do you get the money?—From rother of mine..

51487. Does he send you this money in order that may be able to pay your rent?—Yes.

51488. Has he got the same right in this farm you have?—He will—just the same.

51489. So you look after the farm at home, and goes to England?—Yes.

51490. Sir John Colomb.—What stock do you keep this £1 11s. holding?—A couple of cows.

51491. Do you sell the calves soon after they are n, or, if not, how long do you keep them?—I sell m when they are a year old and often when they born.

51492. You have got a couple of cows and you keep the produce of those cows on the holding until they are a year old?—Yes.

51493. Do you mean to say that you do all that out of the seven acres of reclaimed bog?—Yes. There is this other place that the cattle run in on—the cutaway bog.

51494. Have you got grazing rights on that land that they run in on?—Yes; the places where we cut turf.

51495. And the commonage you were speaking of just now is outside the reclaimed bog part of your holding. You have all grazing in common and the rights on the bog?—Yes. Previous to the passing of the Land Act of 1903 the tenants on the Costelloe property purchased their holdings at prices varying from seven to sixteen and a half years' purchase, and they get decadal reductions.

51496. Who was the landlord of that holding?—Captain Costelloe.

51497. Was this property that was sold at seven years' purchase sold in court?—I think it was sold by the landlord himself direct.

51498. Most Rev. Dr. O'Donnell.—Did you reclaim these seven acres yourself or did your father reclaim them?—My father and grandfather and the others who came before me, and I myself did a bit.

51499. Through your labour this cutaway bog produces good crops?—Yes, but the land is nearly worn out.

51500. It requires a rest occasionally, but it would not do to leave it untilled for a long period?—It would not. It is fairly good when reclaimed first, for a few years, but when a small holding is continually worked it gets worn out.

51501. What kind of potatoes have you on the land this year?—Not good.

51502. Did you spray?—I did.

51503. Mr. Bryce.—With a machine?—No; with a broom. How could I get a machine?

51504. Most Rev. Dr. O'Donnell.—Were there any machines given out to hire in your district?—No.

51505. Were there none given out last year?—I never saw any given out in my place at all.

51506. The small holders in your place could not borrow machines to spray?—Not at all. They would not know what it was if they saw it. They never saw one before.

51507. Do you think if they had facilities in the way of machines and mixtures they would be glad to utilise the facilities?—I am sure they would, but you could not raise a good crop on the land, because it is worn out.

51508. In your neighbourhood do none of the people spray except with a broom?—With a broom, all.

51509. So they were not aware of any facilities to spray with a machine?—They were not. They never saw a machine in my locality.

51510. Mr. O'Kelly.—Were the rents on which the tenants purchased first or second term rents?—First term rents.

51511. Sir Antony MacDonnell.—What crops have you growing this year on your holding of seven acres?—I have about an acre under potatoes and about the same under oats.

51512. Have you got roots, mangolds, or turnips?—Some little patches of turnips. I would not count them.

51513. Have you got cabbage?—Just a wee patch. There could be about an acre under meadow.

51514. What is the rest occupied with?—Pasture.

51515. That is grass?—Yes.

51516. How many acres have you under grass?—About three or four. I cannot exactly tell you.

51517. Do you keep two cows?—Yes.

51518. Do you sell the milk or make the butter yourself?—There is nothing but what we require for the use of the house.

51519. You use your own milk and butter?—Yes.

51520. Have you any pigs?—Yes, two.

51521. Have you got a horse?—A little mule.

51522. And you cannot do with a mule for ploughing, of course?—Yes.

51523. That makes up the whole thing, and on that you make your living?—I could not offer to live on it but for the help I get on it.

51524. Would you be prepared, if you got a thirty-acre holding in the County Roscommon, to migrate there?—Faith I would, if I were fixed on it, and I think I could live there.

Sept. 2, 1907.

Mr. Patrick Finn.

51525. If you got a thirty-acre holding in Roscommon, with a house built on it, would you be prepared to remove there?—Certainly, I would move there.

51526. You would have no objection to remove there?—Not a bit.

51527. Mr. O'Kelly.—What kind of a reception would you get in Roscommon?—I cannot tell.

51528. Sir Antony MacDonnell.—You would be prepared to take your chance?—If I had a good crowd along with me I would not be afraid.

51529. Sir Francis Mowatt.—Are you a married man with a family?—Yes.

51530. Mr. O'Kelly.—You would like to bring some of your old associations with you; that is, some of your neighbours. You would be all willing to migrate?—A great many more want to go as well as I.

51531. Don't you think that the difficulties of migration would be considerably lessened if, instead of one man going from one particular parish, three or four or half a dozen went?—I am sure of it.

51532. The old associations would be brought up in the new parish?—Yes.

51533. Most Rev. Dr. O'Donnell.—Probably you would like to see the farm to which you were to migrate before committing yourself?—I am sure I would. I would not like to buy a pig in a poke. The property which I have referred to is adjoining ours, and we had to pay 18½ years' purchase, under the Act of 1903, for inferior land, owing to the fact that the holdings were all sunk in arrears, which the tenants were sued for each May, and had to pay a full year's rent the November after.

51534. Sir John Colomb.—What was the average number of years on the holding of the tenant?—From two and three years up.

51535. And then you did not pay in May, when you were sued, but paid a year's rent in November?—They paid a year's rent in November, and were sued for a half year in the following May.

51536. Sir Francis Mowatt.—It did not make much of a difference whether you were sued or not?—It makes a big lot of difference to a man when he does not have it. The landlord, in order to get his demand, held out inducements to the tenants as follows—to wipe off all the old arrears and add the year's rent due in November, 1904, to the purchase money.

51537. Mr. Bryce.—The result of that was, as a matter of fact, although there was apparently only one year's rent of arrears added to the price, practically all these old arrears are really added to the price; that was why you gave so high a rate of purchase?—The arrears were not added to the purchase money.

51538. But the reason you gave the high price was because you got off the arrears?—Yes. The year's rent was put in with the purchase money, and we had to pay no rent that year.

51539. But I only want to point out that practically all those years were added to the purchase money, because otherwise you would not have given that number of years' purchase?—Yes. The year of 1905 promised to be, and was, a year of famine, so in order to avoid to a certain extent the difficulties which beset them the tenants embraced the offer, and paid 18½ years' purchase, half of which money would not have been advanced by the State had the land been inspected. We also had to buy direct from the landlord, while if we bought through the Congested Districts Board there would have been works opened, and improvements made on the land, such as drainage, etc., which would improve the condition of the tenants in many ways. In one townland in this property there are sixty-six holdings of what they call land, and the valuation of each of these holdings is under £2; 150 men from this townland reap the English harvest every year, and about sixty three have left for America during the last few years, the money sent home by these being the only visible means of keeping their relativs at home from starvation. All the people in this district have this sad story to tell. To remedy this deplorable state of affairs we believe that the Congested Districts Board or the Estates Commissioners should be granted compulsory powers of purchase, as by this means alone will they be able to secure grazing lands for distribution amongst the people.

51540. Mr. O'Kelly.—You think that compulsory purchase is necessary to acquire the grass land?—Yes.

51541. Do you think the landlords are unwilling to part with them?—I think so.

51542. Have you got any facts that you can adduce in support of that?—No. There are no untenanted grass lands in our locality.

51543. Sir John Colomb.—Suppose that the Congested Districts Board or the Estates Commissioners had compulsory powers to take land, and to fix the price at their own will, would you give them the powers of compulsorily fixing what the tenant was to pay?—I would leave it to what a reasonable man would think the land would be worth.

51544. Suppose a man did not think his annuity was reasonable, would you compel him to pay it?—A man must pay something.

51545. Would you give to the Congested Districts Board power to force the man to pay an annuity that he had not agreed to and thought too much?—I would give them power to compel him to pay a fair price for it.

51546. What the Congested Districts Board said was a fair price, although the man did not think so?—He would have to do it.

51547. Sir Francis Mowatt.—You would be prepared to trust your case to the Congested Districts Board?—Yes; I think I would.

51548. Mr. O'Kelly.—As between landlords and tenants, let me suggest to you that it will operate in this way: the landlords say they are willing to sell, and the tenants say they are willing to buy, and they suggest to the landlords that they are willing to allow the Congested Districts Board to decide the price that might be equitable between them. Is not that your experience?—Yes.

51549. Is not it the fact that the tenants on every single property in the County Mayo have said: "We are willing to buy if you are willing to sell; let the Estates Commissioners or the Congested Districts Board make the bargain"?—Yes.

51550. And is not it a strong presumption in favour of the justice of the tenants' case that they are willing to submit it to the arbitration of an impartial tribunal?—Yes. They are always satisfied with what is fair and reasonable.

Sir Francis Mowatt.—Mr. Kenny, who gave evidence before us the other day, is anxious to put in some document in explanation of the evidence that he gave then. We cannot re-open the question, but we will give him five minutes to make any statement he wishes.

Mr. P. D. Kenny re-examined.*

Mr. P. D. Kenny.

51552. Sir Francis Mowatt.—You wish to put in a document in connection with the evidence which you gave the other day?—Yes. It is this:—"On the estate of Lady Larpent, at Waterdale, in the parish of Claregalway, the Waterdale tenants are some of the poorest and most highly rented I have known. When I was preparing this estate for sale, the parish priest, Father Commons, stated to me that he was opposed to the Congested Districts Board having anything to do with the purchase of this estate, and that he would not consent to the migration of any of his parishioners." I wish to present that, because my evidence in the matter has been questioned.

51553. Is that your statement?—No. This is a statement by Mr. E. S. Jordan, who is Petty Sessions Clerk at Kiltimagh, and volunteered this when he saw the trouble I was in about giving specific instances.

51554. Mr. O'Kelly.—I think this explanation arises out of my cross-examination of your other evidence?—It is more particularly on account of his lordship.

51555. Most Rev. Dr. O'Donnell.—Who made that statement?—Mr. Jordan, of Kiltimagh, volunteered this statement from his own experience, and he is prepared to swear it if necessary. He gave it to me after I had given evidence at Castlebar, and

* For former examination, see p. 104 *et seq.*

me of my evidence was rather doubted, and I am t surprised, because it is rather extraordinary evi-nce.

51556. That was put into your hands after you gave ur evidence?—Yes.

51557. Mr. Jordan is not here himself?—He is t, but he is prepared to make an affidavit if neces-y.

51558. What a pity he does not come here?—He ll be delighted to come if he is asked.

51559. Would not that be the right way, that he ould come up himself?—I am concerned only in is way about it—I believe firmly that this does ppen, and I have made it a part of my evidence. at evidence has been somewhat doubted, and I nply want to have my evidence corroborated by a rect document. I was not free to tell you the mes of the people who told me.

51560. Why did you not suggest to Mr. Jordan at he should come and give this evidence?—I will very happy to do so now.

51561. Would not it have been the right thing for m to have done so at the start?—I am concerned ly with the right thing for me to do.

51562. Do you remember saying in your evidence at you knew twelve men who perjured themselves? Yes.

51563. I must say this, that since then it has been ated to us that the twelve men spoke the truth, and at you had gone round suggesting to them what s not exactly the statement they themselves wished make. It is perfectly fair for me to state that, cause it has been stated to me and to others?—es this mean the same twelve men?

51564. As far as I know?—I don't think it is re-ant to our business—the statement. It was made ly very indirectly, and has nothing to do with this siness at all; but since the matter is stated, I peat it, that I have known twelve men who swore at they knew to be not true.

51565. Mr. O'Kelly.—Where was that, and when? I don't think that is relevant either. It is only question of credibility.

51566. I speak with the greatest possible friendli-ss, but let me suggest to you this, that it is rather erious matter that you should come before a Royal mmission and say that twelve of your countrymen a certain occasion were guilty of perjury, and n to say that it is not relevant for a member of Commission to seek to find out when that was ne?—I think the question giving rise to my state-nt was an irrelevant one to the business of the mmission.

51567. It is for the Chairman to say that. Did you say that twelve of your fellow-countrymen a certain occasion perjured themselves? Under the direction of Sir Francis Mowatt, I, as a member of the Commission, want to ask you when that occurred, and where?

Sir Francis Mowatt.—I am afraid I must interfere to this extent. I called this witness to put in a certain statement. Then I told the Court that the rest of his evidence would not be re-opened in any way. We have closed that evidence at Castlebar, and I submit to the Commission that I don't wish to attach much or little importance to anything that was there stated; but he was not called for the purpose of re-opening the rest of his evidence. It must stand or fall by the Commissioners' judgment of it.

Mr. O'Kelly.—My question would not have arisen only you permitted the witness to make that statement.

Sir Francis Mowatt.—Pardon me. The statement was made by one of my colleagues. I ought, no doubt, to have then told the witness that he was not in the chair for that purpose; and I am afraid that I cannot allow the rest of his evidence to be re-opened except on the single point on which I allowed him to be re-called. If any of my colleagues desire to ask him any question on his statement, that is open to us, but it would not be fair to the other witnesses to go beyond that.

Mr. O'Kelly.—I shall, of course, immediately obey your ruling, but I might point out this to you, that a very serious reflection has been made on our fellow-countrymen?—(*Witness*)—Only on twelve of them.

Mr. O'Kelly.—He has said that on a certain occasion twelve of our countrymen perjured themselves. Now, might I suggest to you, with all respect, that it is perfectly fair for me to test the accuracy of that statement by asking the witness when those twelve of our countrymen perjured themselves, and where.

Sir Francis Mowatt.—It was perfectly open to you on the occasion when the statement was made. You had an opportunity of doing that. This witness is now re-called for the single purpose of putting in a particular statement, and I think it would be out of order for us to re-open the whole of his evidence.

Mr. O'Kelly.—Might I suggest to you that you would, considering the very serious character of the question, ask the witness yourself?

Sir Francis Mowatt.—It would be as much out of order for me to put it as yourself.

51568. Sir John Colomb.—On the statement you have handed in I wish to ask a question. Was the statement which you have submitted to us voluntarily said to you, or did you write and say you wished a statement from him?—No, I did not. His statement was entirely volunteered, but I did request him to put it in writing. The statement was volunteered verbally, and I said it would not be much use to me unless it was written.

Rev. Michael Keaveney examined.

51570. Sir Francis Mowatt.—You are parish est of Charlestown?—Yes. I have been asked by Executive of the United Irish League to give evi-ce before this Commission. I have lived for the t twenty-five years in exclusively congested dis-cts, and have been a member of the County Com-ttee of Agriculture of the County Mayo from the ie the Department was established. With the eption of one townland, my parish lies within limits of what was formerly the Dillon Estate, contains about 600 agricultural holdings, if they y be so described. The average area of these hold-s is almost exactly twenty-four statute acres, and valuation £2 10s. They were almost all sold to occupiers at fifteen years' purchase of the rent. e rent was fixed since 1881 at the valuation, and annuity now payable to the Land Commission very little over a shilling an acre. I agree in ry particular with the evidence given by Father llon, at the sitting of the Commission in remorris; but I am prepared to give my views, in my own way, if the Commission so de-e, on:—(1.) The constitution of the Congested tricts Board; (2.) The relative merits of the thods, as I understand them, of the Estates Com-sioners, on the one hand, and of the Congested tricts Board on the other, in the enlargement treatment of uneconomic holdings; (3.) The re-ve merits, in the application of public money to the improvement of the condition of the people in the congested districts, of the County schemes of the Department on the one hand, and of the Parish Committee schemes of the Congested Districts Board on the other; (4.) The necessity of giving to any body—Commissioners or Board—charged with the duty of relieving congestion and dealing successfully with the problem, the powers of compulsory purchase; (5.) The attitude of priests towards the question of migration; (6.) The special circumstances of the people of my own locality, and how their condition might be improved.

51571. Might I suggest that in reference to any of these headings as to which you are absolutely in accord with Father Fallon, I do not think it will be necessary to extend your evidence. But in any case in which you desire to offer an opinion not identical with, or carrying you a little farther than Father Fallon, we shall be very glad to hear what you have got to say; and of course when you come to the attitude of the priests towards migration, and the special circumstances of the people in your own locality, and how they might be improved, you have full liberty?—I have put my views in the form that I have employed in order to economise time.

51572. Mr. O'Kelly.—What would you suggest as the constitution of the Congested Districts Board?—It is a big question, and everybody is afraid to tackle it, so that if I make a mistake it is no harm.

Sept. 2, 1907.

Rev. Michael Keaveney.

My view is it should consist of twelve members. It consists at present of ten. Half of the twelve should be elected, and the other half nominated by the power that at present nominates the Board.

51573. Sir FRANCIS MOWATT.—And elected by?—By the County Councils.

51574. Mr. O'KELLY.—Do you think that a member of a great Department such as the Department of Agriculture should be a member of the Congested Districts Board?—I should like, then, my own constitution.

51575. Don't you think that anyone dealing with that kind of work should devote his time to it, and that the head of a Department such as the Department of Agriculture would not be able to devote much time to the work of the Congested Districts Board?—My answer to that would be this, that whoever now are responsible, or will be, for constituting a Congested Districts Board, will be the persons to judge whether his obligations to the Department would unfit him. In some cases it is quite possible that a man's duties would unfit him; in such a case I think he has quite enough to do to mind his own business.

51576. The Under-Secretary for Ireland for the time being, as you know, has a great deal of work to attend to. Do you think he should be a member?—If you allow me to state what I intended I will go to your question in a moment. As I said, I consider a proper constitution of the Board would be six elected and six nominated representatives. At once I am faced with the difficulty that there are eight counties in which there are congested districts; and how are you to work out the six?

Mr. O'KELLY.—I am suggesting to you men who ought not be members.

Sir ANTONY MACDONNELL.—Speaking for myself, I would ask that Father Keaveney would state his case, and then Mr. O'Kelly will ask his questions, and I will ask my questions; but I think it is fair to us and fair to Father Keaveney that he should be allowed to state his case. I make that suggestion.

Sir FRANCIS MOWATT.—That won't interfere in any way with Mr. O'Kelly's absolute liberty of questioning.

51577. Mr. O'KELLY.—The custom followed has been to question witnesses on the subject of each section of their evidence?—I have finished by statement. I think that the Chief Secretary and the Under-Secretary ought not to be at the same time members of the Board, and that the Under-Secretary should attend, in the absence of the Chief Secretary, because I am anxious to limit the number. I think that the Under-Secretary, in the absence of the Chief Secretary, should be an *ex officio* member of the Board, and that five other members should be nominated, and that six should be elected in the following way—The eight counties in which there are congested areas should be divided into two. Four of them are larger than the other four. They would have a larger area of congested districts. To each of the four counties with the large congested areas I would give the nomination of a member. To the other four I would give the nomination of only two. There would be a difficulty in settling the districts. I think I could get over it. Take Leitrim and Sligo. Both are congested counties. They have but one Committee to manage the joint asylum for both counties. In the same way as the Chairman of that Committee is found you could group four of the smaller congested areas, so that you would have two members from each.

51578. Do I take your view to be that the Vice-President of the Department of Agriculture ought not to be a member of the Congested Districts Board?—That is a matter that I have not considered; but on the moment, I think he should not.

51579. Do you think an official of the Department of Agriculture, however eminent, such as Mr. Green, should be a member of the Congested Districts Board?—I think Mr. Green should be a member of the Board, on account of his special knowledge of fishing.

51580. Mr. Green is a paid official of the Department of Agriculture. Don't you think that his duties as an official of the Department of Agriculture so occupy his time as to prevent him from giving to the work of the Congested Districts Board that attention which it deserves?—My opinion is that, however that may be theoretically, his knowledge of the fishing industry is so great that he should be a member of the Board.

51581. Assuming he has to devote all his time and attention to the work of the Department of Agriculture?—Really I think it is the body nominating the members who should look after that.

51582. Don't you think that the twelve members of the Congested Districts Board whom you suggest considering the great importance of the subject should be able to devote as much time as possible to the work?—Certainly; and I hope it will be much more important in future, and that they will have more work to do.

51583. Those on the Board should give their attention to the work of the Board?—Yes.

51584. Sir ANTONY MACDONNELL.—The general function of the Board is the oversight of all the officials and servants of the Board, and the determination of questions of policy. In the working of the Board it comes into touch very often with the working of the other Departments of Government which deal with the general conditions of the country and its improvement, such as the Department of Agriculture and the Estates Commissioners. Does it occur to you it would frequently be of great benefit if a member of the Department of Agriculture and even a member of the Estates Commissioners were members of the Board, so that any questions affecting the three Departments brought up for consideration might be determined, having regard to the interests of all these three Departments?—I quite appreciate the point, and agree with you.

51585. Therefore you would be disposed to reconsider your statement that the Vice-President of the Department of Agriculture ought not to be a member of the Congested Districts Board?—I said he had quite enough to do for himself.

51586. The business of the Board, which meets once a month, is not a matter of actual heavy work but rather of determination of principles, so that the actual work of the Department of Agriculture would not interfere with the action of the Vice-President of the Department of Agriculture upon these matters of principle, and the co-ordination of the two Departments if they are harmoniously directed. If you are, as you propose, to have a large expansion of our work, it would be desirable that we should work harmoniously with the other Departments of Government which are also concerned with the improvement of the country. These are the Department of Agriculture and the Estates Commissioners?—From that point of view, and on these lines I quite agree, but I think I have known more or less conflict, or something verging on it, between the Department, occasionally, and the Board, and where that would occur there would be a slight disadvantage in having a member of one body acting on the other.

51587. Would not it be better if those subjects of contest and conflict that did occur should be discussed quietly round a table than be prolonged in a paper correspondence?—I quite agree with that.

51588. It would be much better to talk amicably over the whole matter, and the members of the Board could rub their minds against each others, and come to a harmonious conclusion?—Yes. I fancy that after the report of such an important Commission as this, and one which has taken so much evidence, and gone to so much trouble, that very great regard will be attached to its recommendations; therefore anybody charged in future with the reconstruction and constitution of the Congested Districts Board will be very careful, I am quite satisfied, to select the very best men to administer the important work that will lie before them.

51589. Then, in regard to the proposal to have six elected members when the Board was first constituted you are, no doubt, aware that the question of election was considered, and it was thought, on the whole, better to take men of known independence, who would attend equally to all districts, and have no preference for any particular district. Whether you think any change in that respect ought to be introduced is a matter for consideration?—I have no doubt at all that the gentlemen who do act act as fairly and as capably as any body of men can, and the reason why I suggest the elected element is to get the Board more into touch with the districts in which it operates.

51590. What would you say to some such arrangement as this—a small Board composed of the very

st men you could appoint, and in each of the ngested districts an advisory committee appointed r the purpose of bringing to notice all points con- rned with the particular county or particular strict co-ordinating them, and converging them upon e Board with the authority that would come from n advisory and representative committee of the nd you mention?—Wherever that advisory committee ould be in a position to feel that their recommenda- ons would have weight, and that they were fluencing the decisions of the Board I think I would ll in with that view, because what I would like is at the people in the various districts would feel that ey were brought into touch with the Board and had mething to say to their operations.

51591. A body like that, which might be elected in e same way as you suggest, would necessarily carry great degree of weight, and that degree of weight ould increase in proportion to the reasonableness d importance of the recommendations which they ould make?—I quite agree.

51592. But, passing from that to another aspect of e Board. The Board meets once a month, with mmittees on two days of the month. In the interval, at is for twenty-seven or twenty-eight days out of e thirty or thirty-one days of the month, matters e carried on by the ordinary officials of the Board. ry frequently it happens that certain business comes which requires immediate orders. These orders ve to be passed by somebody, or they would be validated afterwards at the meeting of the Board. falls, unfortunately, to my lot, as being the person the spot?—Not unfortunately.

51593. I am glad you say so, but it falls to my lot deal with these matters in that way; so, if the der Secretary is not a member of the Board, you ll still require some official in Dublin who will have deal with these urgent pressing questions. If the der Secretary is not a member of the Board, how uld you provide for these questions? Has that ever curred to you?—No; but I am prepared to offer an inion on the spur of the moment. What occurred me was that having both the Chief Secretary and Under Secretary members was multiplying mbers. My object was to keep the Board as small possible.

51594. May I suggest this to you, that the Chief retary is every year from January until August nost always over in London, where he is detained his Parliamentary duties. He comes over to blin, and settles in Ireland, say, for three months the year at the outside; that is to say, he attends, Chief Secretary, three meetings of the Board. uld you exclude the Under Secretary from member- p of the Board during these three months, keeping n out of touch with the Board during that period, l making it necessary for him later on to get into ch with it afresh?—No. It would occur to me, view of your information, that, while the Chief retary might be a member to cover all legislation l bring the Board into touch with the Government, should not act.

51595. In practice, it is exactly as you say. The ief Secretary's legislative business prevents him. e Board is always delighted to see him when he es, and his connection with the Board always pre- poses him to help the Board in every way he can, ecially in its constant and prolonged struggle with Treasury?—I suppose that the longest and ngest is before you if you do anything with this mmission.

51596. I have mentioned this matter in order to w you that the suggestions which you make do not er the whole ground?—I know that they do not. ust make them to ventilate the question, because er people seem inclined to shirk it.

1597. It really comes to this—you would not think t the system of nomination should cease; you would w the responsible Government to continue to minate, but you contribute the suggestion that you ld introduce the elective element?—Yes; I would.

1598. In connection with that, I would suggest to ir consideration whether the elective element should introduced directly on the Board or whether it uld be introduced in the shape of advisory com- tees?—I have given my view already on that.

1599. Sir JOHN COLOMB.—I presume I am right drawing this general inference, that you are quite isfied that the Congested Districts Board is the best body for dealing with the problem of congestion?—Quite satisfied.

51600. I understand that you would desire to limit the number of the Board to twelve. Am I right in assuming that you would have no *ex-officio* members?—I would. I stated that I would have the Under Secretary in the absence of the Chief Secretary, and I now modify that in the direction of the suggestion of Sir Antony MacDonnell—one *ex-officio* and five nominated.

51601. Is that *ex-officio* included in the six nominated members?—Yes.

51602. So it would come to this—There would be five nominated members and one *ex-officio* member, the latter being the Under Secretary. With regard to nominations, have you got any idea as to the period for which men ought to be elected or nominated for service on the Congested Districts Board?—The nominated members would be life members, but I would be careful in selecting them. The elected members would be regulated by the duration of the election of the County Council.

51603. Do you not think that that is open to this objection—the nominated members are permanent, and the elected members would be liable to be shifted off in the exigencies of local political life. Don't you think that that is objectionable?—It would to some extent, but I do not think there would be much difficulty, because the nominated and *ex officio* members would always get some of the other members to join them, and there would be a majority to manage matters, so that there would not be any great trouble on that score.

51604. Does it not occur to you that the object of electing a member of the Congested Districts Board by the county council would not be merely to get into touch with the Board locally, but also to get as much as they could for their own locality?—Certainly.

51605. Don't you think, taking human nature as it is, that the natural tendency of the elected member of the county council would be to turn all his attention not to the general problem of congestion in Ireland, but to get as much as he could for his own particular place. Don't you think that there is that danger?—I do; but I think it is not a real one. Let us go to actual facts. Suppose that the member for Kerry was anxious to get a bull for Kerry, the member for Donegal would be inaccessible always from Kerry, and he would join the nominated members. I think that that thing would come to an equilibrium very soon, and the elected members would find that their best policy was to fall in with what was generally best.

51606. Don't you think that a member of the Congested Districts Board, elected for a county would be very much judged, not in relation to the whole problem of congestion, but by the amount of money that he got for his county?—He would be able to tell them that he did his best.

51607. There would be another man to say that he would do much better?—There would, of course.

51608. Do you or do you not see some danger in interfering with the continuity of policy by having the time of service of elected members associated with their time of membership of the County Councils?—I see that there is a difficulty there, and I can only consent to that on account of the advantage on the other hand that the local representation would give.

51609. You regard it as the lesser of two evils?—At all events, there is the counterbalancing advantage.

51610. Is the Commission to understand that there is to be no qualification for an elected member and that he need not necessarily be a member of the Council or anything like that?—Yes. I would leave it to the Council. They might get a better man outside their own body for that particular work.

51611. You said there were to be six nominated members, one of whom was to be *ex-officio*. Would not there be two on your own showing—would not the Fishery Inspector be a member?—My view is that the Government ought to be left free to nominate the men, having regard to their whole field of work, whom they think most competent to discharge it. If they thought Mr. Green, notwithstanding any other duties he has to discharge, would be the best man I would not criticise their action on it.

51612. You would leave it to the Government to include the fishery representative in the nominated members?—Certainly.

Sept 2, 1907.

Rev. Michael Keaveney.

51613. Sir FRANCIS MOWATT.—Or any other person they thought best fitted for the work?—Yes.

51614. Sir JOHN COLOMB.—The position of a man responsible for fisheries is totally different in this sense, that the fishing operations have no artificial boundaries. The fish do not recognise any, and therefore a man dealing with fisheries to be really of value, must take care of the interests of all the coast and not of any particular part of it?—Quite so, but I don't see any difficulty.

51615. Most Rev. Dr. O'DONNELL.—This question of the constitution of the Board is of fundamental importance?—I consider it so.

51616. Don't you think that if the Congested Districts Board is really to relieve congestion within a moderate time the Board must have three things in its members—first, the members should have good knowledge of the general work to be done and the policy to pursue; next, the members should have a knowledge of the local wants of the whole congested area; and third, would not the Board require to have great influence throughout the congested area? I take it that your suggestion of an elected element on the Board is largely with the object of consolidating local influence and support for the Board?—And supplying a knowledge of local requirements.

51617. You have suggested one way of doing that, through the County Councils. I am not going into that with you. You look to a not very large Board composed of a dozen people. Let me call your attention to the six men who would remain after your six elected men. You think six elected men would suffice to give perfect knowledge of the wishes of the whole district?—If a larger Board could be worked efficiently I would rather have a larger number.

51618. Let us take the other six, for a moment. You are aware that before Mr. Green became an important official of the Department he was a member of the Congested Districts Board?—Yes.

51619. As such, he derives his salary, not from his appointment to the Congested Districts Board, but as an inspector of fisheries. You are also aware that in the original constitution of the Board the Chief Secretary is a member, or, in his absence, the Under-Secretary; also in the original composition of the Congested Districts Board one of the Land Commissioners was a member of the Board?—I am quite aware of that.

51620. And you know also under recent legislation that the head of the Department is a member of it?—I am aware of that also.

51621. Therefore if the suggestion put to you were adopted it would not be much of a change on what was originally the composition of the Congested Districts Board. Originally on the Congested Districts Board there was a Land Commissioner. If an Estates Commissioner came on, that would not be much of a difference. Again, Mr. Green was the representative of fisheries. Then under recent legislation the head of the Department is a member of the Congested Districts Board; again, under recent legislation the provision which said that the Chief Secretary, or in his absence, the Under Secretary, should be a member, has been changed into this, that both the Chief Secretary and the Under-Secretary shall be members?—I am aware of that.

51622. If you take all those gentlemen and make them *ex-officio* members you leave very little room for the Government to nominate, out of the six, men with special knowledge of this special Department?—Only two, as far as I follow you.

51623. Father O'Hara is put on in respect of agriculture, so I suppose you don't object to that appointment?—I will have to come to yourself next, my lord.

51624. In other words, the *ex-officios*, for their knowledge, or the good they can do, and for the purpose of harmony between the different Departments, would, under your proposal, leave comparatively little room to people who would have special knowledge and special capacity to pursue the policy of the Congested Districts Board?—I see that.

51625. Does not it look, then, as if you would require a somewhat larger number?—Yes.

51626. When you enlarge the number don't you think you might bring in a larger elected element?—Yes. I would give each county of the eight congested at present a member. If I could conceive that sixteen members would work as harmoniously as twelve, I would at once say that that was the proper constitution, and if the body who are to nominate consider themselves bound to keep the head of the Department, the Inspector of Fisheries, the Chief Secretary, the Under Secretary, as practically *ex officio* members, then I think the local requirements ought to get the balance of four more.

51627. Mr. O'KELLY.—You see a great advantage in continuous supervision of the work of the Congested Districts Board?—Yes.

51628. To have continuous supervision they should have permanent members working in the same way as the Estates Commissioners now?—There should be continuous work. I would not say exactly as the Commissioners work.

51629. The work of the Congested Districts Board comes under three heads—agriculture, fisheries, and industries?—Yes.

51630. Would you give consideration to the suggestion that you should have, say, a vice-chairman of each of the three Departments to which I refer, paid officials, associated with men of local knowledge?—I don't know where you have a Department of industries.

51631. I am referring to the particular work of Mr. Walker under the Congested Districts Board. Suppose you had three vice-chairmen, with permanent officials of the Board, exercising continuous supervision over these three Departments, it would give you the advantage of continuous supervision, which nobody will deny, and then outside these three you might have as you have now, something like his lordship the Bishop and Father O'Hara associated with them, but the requirements of whose position prevent them from attending daily to the work of the Board?—Really I do not think it would be necessary to have constant supervision in that way. I take now the Department of Agriculture, with which I am most familiar, and I think that without any constant supervision beyond what Sir Antony MacDonnell describes as the necessity of giving orders, that the Chief Agricultural Inspector carries on the work quite as efficiently as if there was a vice-chairman or anyone else without constant interference.

51632. My only suggestion is this: We have three Departments, agricultural, industrial, and fisheries. I am suggesting that there is great advantage in continuous supervision over their work by members of the Congested Districts Board. I am suggesting also that there is a further advantage, and that is the advantage of having members like the Bishop and Father O'Hara associated with such a body?—Yes.

51633. Might I suggest that it would be a very fair compromise with the question if we had three vice-chairmen acting under the chairmanship of the Chief Secretary for the time being, one for each Department, associated with members having local knowledge?—I daresay that it would be an advantage.

51634. Sir FRANCIS MOWATT.—As you entirely agree with Father Fallon on the sub-heads which follow, and as we are anxious to hear from you fully your opinion, on number 5, the attitude of priests towards migration, and, 6, the special circumstances of the people in your locality, if you don't differ from Father Fallon on the intervening points we can accept your evidence in support of his on these matters?—I am quite satisfied with that, as I understand you will infer in that way what my opinions are. I think that the methods employed by the Department of Agriculture are not as effective in giving results as the expenditure of money under Parish Committees. The next point is the treatment of land that has been acquired. I don't know anything or much about the Estates Commissioners, but the complaint is constantly made that there is a grievance felt about the delay made by the Congested Districts Board often in dealing with these. On that point I have experience of some very congested holdings, and though in the beginning the people were very restive and dissatisfied, they are now dissatisfied that the Board did not spend a longer time because on account of the outcry they were not able to do all that they might have done in the way of planting. There were opportunities missed because of the pressure of public clamour that they were delaying too long. In regard to the attitude of priests on the subject of migration, I come from the same district as the Chairman of the Council, Mr. Henry, who was first examined here to-day, and he stated to you that the people were quite willing to migrate. If you ask them generally that question they will

ate so; but if you come to any one of them, as I ve done, and ask him: "Would you go now to ch a place, and I will try to get you a holding," e result is different. I have taken the poorest town- nd, where the people are all very poor, with an erage valuation of £2 10s. I have asked them to nsider the question of giving up some of their very or holdings and that from my acquaintance with me of the officials of the Board and some of the embers I thought I should be able to get fairly good ldings for some of them and I have asked them ould they go and not one of them consented. I am ite satisfied that that disinclination is gradually sappearing and that if it could be arranged they ould go in groups of a half dozen people with know- dge of one another. I think that might be easily ranged and I am quite satisfied that they would ten migrate. I want to put that in on account of e suggestion made to the Commission that we are posed to migration. It is not true at all. The bject under number 6 heading is one that would ke a long time to deal with if I went into it fully, t there is only one point of importance, as far as I ow, that I would like to give to the Commission. he average acreage of these holdings is 24 and the aluation £2 10s. It would surprise you, perhaps, know that I could show you a holding that pays at is moment 32s. a year of an annuity, and the owner it told me, not this year but last year, of his re- arkable success. I happened to meet him one day, nd I asked him what he got out of his holding. He id he had thirteen head of cattle, six stacks of oats, venty-one tons of hay, and two acres of potatoes. I ggest, therefore, that the valuation does not al- ays show you precisely where you are. That was ll reclaimed land and the valuation had not been anged since 1847, although he got that produce out it, and it was entirely his own work. On the other and, I will get plenty of holdings in my own parish here the valuation is higher; yet they have the ost abject poverty, and the only cure for them is igration.

51635. When you speak of 24 acres, which is a fair zed holding, do I understand that the reason that e valuation is so low is that the land is rough rubb and bog?—I have given you a case in which I m quite satisfied that the estimate was under the roduce on which the annuity is thirty-two shillings, hich is a reduction of nine shillings on the original nt, while the valuation is only £2 3s. The acreage ould be more than twenty-four. It is all reclaimed nd. When the valuation was put on it it was all rown heath.

51636. Sir ANTONY MACDONNELL.—It is obvious ore or less from what you say that these 24-acre oldings, by intensive cultivation, may be made conomic?—There are two methods I would suggest: hat the scope of the parish committees should be nlarged and more money put at their disposal, be- use they are making the best use of it and it would e much easier to deal with improvements in that way han to attempt to migrate people, which is a very ifficult thing. Then I believe that on most farms he produce could be doubled by a better system of griculture. Since the Board got possession of the lace it is marvellous what improvements they have ade. I am quite satisfied that the produce of a good any of the holdings is at least 25 per cent. more, nd everything is improved.

51637. Would you suggest the lines on which you hink the activity of the parish committees should be eveloped and exactly what further improvements you hink they might encourage and assist?—I would, in ach parish, keep the election of parish committees as is. Of course I agree entirely with the suggestion hat there should be a permanent local man, the best an who could be selected, with knowledge of the cality and who farmed himself, and that he should e given a fair remuneration for going about and ointing out to this man and that what they could o, and he would be able to point to his own farm s an illustration, and I could find such men.

51638. There is this difficulty. I am afraid that if e paid full attention to his other duties he could ot attend properly to his farm, and then the refer- nces to his own farm would be rather unfortunate?— ometimes when the children grow up all that is eeded is superintendence of the work. I know a illage where there are two farms, one adjoining the ther, and I am speaking with accuracy when I say that one farm produces more than double what the other does. In the neighbourhood, within a range of ten miles, they are all congested districts, such as my own; where some of the people are in abject poverty, but where, in one way or another for the most part, they get on fairly well, and in these places it is most desirable that there should be bought up large tracts of untenanted land and that these people should be given a right to send their cattle to graze there.

51639. A common right?—Yes. The idea was not new. I was over in Harrogate and I found there they did this; and, of course, if the Board would have any difficulty in retaining land, as I understand from a point of law they might, trustees might be appointed and in that way help. That is the most easy way, financially, in which I think these people could be helped.

51640. Sir ANTONY MACDONNELL.—That has been suggested by Mr. Doran?—Yes. I read his suggestion.

51641. Mr. O'KELLY.—The amount spent through the parish committees lessens the amount that is spent yearly on improvements?—My suggestion is that the money now expended through the agricultural committee and under the county schemes should be handed over to the parish committees in the congested districts. Unless more money is given to the parish committees they won't be workable. We used to get £160 for my parish committee; we only got £80 this year, the reason being that the money spent remains the same while the grants are being extended. There is no direction in which grants could be more usefully enlarged than in the direction of giving larger grants to the parish committees.

51642. Sir JOHN COLOMB.—Do you think in a very congested district the men with large holdings would be more likely to migrate if they got advantages for doing it than the men with small holdings?—They would be more likely to migrate, and their migration would be of greater advantage.

51643. Do I understand that with regard to developing and enlarging the work of the agricultural committee you are in favour of an extension of the limits of valuation determining the grants, that is, £7 10s.?—The Board, I think, contemplate putting it up to £10, as you consider £10 the value of an economic holding, but I understand that the funds at their disposal were so poor that that could not be done, but I really am not much concerned locally with that, because I have very few £7 10s. holdings and hardly any of £10.

51644. But you are very strong on this point, that the mere figures of valuation are not by themselves a test of the differentiation between economic and uneconomic holdings?—It certainly is no test on the part of the people with whom I am familiar. I would not like to extend the remark to places that I don't know well.

51645. With regard to placing a permanent instructor at the disposal of the parish committee, would you give him, previous to putting him into that position, any preliminary training?—I should be very glad.

51646. You think it necessary?—Not at the beginning of the operation.

51647. When the level of intelligence and knowledge through the operations of the parish committees has increased you would contemplate it being necessary to have men perhaps specially trained?—Quite so. I would extend the range of work to all the agricultural lines that the Department works in at present, and I would train a man to superintend them through the parish committee.

51648. Sir ANTONY MACDONNELL.—How long do you contemplate granting this money through the parish committees? Is it to go on for ever?—I should hope that after a period—I could not name the period—these people would understand correct methods and have their houses put into proper sanitary condition. It would not be necessary for long.

51649. How many years?—I should say ten years at the moment. That is a point I did not consider.

51650. In your part of the country you contemplate ten years' work?—I do.

51651. At the present scale of expenditure?—Honestly I would not continue it at all unless the grants are enlarged, because the members of the committee have so little to do now that we find it difficult to get men to allow themselves to be nominated.

Sept. 2, 1907.

Rev. Michael Keaveney.

51652. Why don't you give prizes instead of grants as is done in Donegal?—I have read about the Donegal system and I have studied our own and I will stick to our own. I consider it the best system.

51653. Most Rev. Dr. O'Donnell.—In a place where it is pretty difficult to find an avenue for remunerative and useful expenditure would you say that the limit should be raised from £7 10s. to £10?—Yes. I think it would be reasonable to put it up to £10.

51654. Mr. Bryce.—Do you think that a general improvement in the general conditions would be brought about gradually by having a certain amount of agricultural instruction given in the schools?—I think that agricultural instruction should be given in the schools.

51655. With regard to the case of the man who had thirteen head of cattle on his holding and paid an annual instalment of 32 shillings, do you consider is he, with all that produce coming off his farm, in an economic position?—He has good clothes and good food; his children don't go to England; he lives on the farm; and he gave his daughter £130 fortune last year.

51656. Sir Antony MacDonnell.—Does he get any money from America or England?—No.

51657. Then he lives out of the holding?—Yes.

51658. And makes money?—Yes.

51659. Mr. Bryce.—Would you describe exactly how much of his holding is under tillage?—I can merely give you what he told me. He had twenty-one tons of hay and I fancy he must have had at least 12 acres to get that, considering the kind of land he has. Then he had thirteen head of cattle. The total extent of his holding would be at least 40 acres.

51660. A great deal of that must be rough pasture?—It is in fairly good condition now. It was a good quality of mountain bog, say, fifty years ago. This man and his brothers went into it, dug pits down for gravel, scattered it around, and brought it into a state of reclamation, and he still continues to work at it, because if he did not it would go back to a comparatively worthless condition.

Rev. Martin Henry examined.

Rev. Martin Henry.

51661. Sir Francis Mowatt.—You are parish priest of Foxford?—Yes. In my view the whole difficulty in the congested districts can be put in a nutshell—more land and better land. That is the root of the whole difficulty. In my parish the valuation of the holdings is under £4. In the district in which I live the average valuation of about 400 families, taking in the natural boundaries for about two miles about Foxford, would be about £2. The remedy for the desperate condition in which the people are situated would be to give them the waste lands at present held by the graziers and the landlords. There is, at present, no possible way of getting them from the landlords, because they will not sell. We have approached the landlords in the parish of Foxford, we have asked them to sell, and they have refused. In some cases they have asked impossible prices, prices we consider extravagant—23 and 24 years' purchase on high rents—extravagant for rents that are in no way judicial rents.

51662. Sir John Colomb.—Are you speaking of untenanted land?—No, but of the tenanted land.

51663. Sir Francis Mowatt.—The tenants, as a body, have not gone into Court?—Some have gone into Court, but the rents are not reduced sufficiently, for the landlord first got two or three of the tenants on each townland to arrange to settle for two or three shillings reduction in the pound, and when the more independent men went into Court this was brought before the Court and the Commissioners gave reductions only in accordance with those that the tenants had got outside.

51664. Were not the lands visited by a valuer?—I am only stating what occurred. Two or three tenants who were in the hands of the landlord, who were not independent, and who were in arrears, agreed with the landlord to accept a reduction of two or three shillings in the pound, and this fact was brought up against those who were more independent and who went into Court and the result was that the reduction which they got was only the same as that given to those who settled outside.

51665. That cuts two ways, because if the independent valuer put the rents at the figure agreed on between the landlord and the other tenants it would look as if the landlord had fixed a fair rent with the other tenants?—It is considered a high rent, and not as fair as where the landlords on other estates allowed their tenants to freely enter the Land Courts, but in any case there is no use asking the landlords to sell. They have refused to sell, and our view is that the only way of getting them to sell is to have compulsion, and compulsion in the hands of the Congested Districts Board, because it is the only Board that is at present satisfying the people.

51666. When you speak of compulsion you mean compulsion to sell at a fair price?—Yes.

51667. Would you say fair price is the net revenue of land on an average of years?—I would not say so. The income of many landlords at present is from rack-rents. There is a case in my parish in which the tenants, seven years ago, got into arrears. The time came round for getting second term rents fixed. The agent came in with a view of making a settlement by giving them a reduction outside Court. He began by giving them two or three shillings in the pound reduction. After giving that he charged them so much for arrears, £1 or £2, according to the amount of arrears, and also so much for bog. The result was that the reduced rents were higher than the original rents. These poor tenants had to sign these papers as judicial tenants for their second term of 15 years, and they are now asked to purchase on these rents, which are nothing less than rack-rents.

51668. Sir John Colomb.—They were judicial tenants and the agent came and gave them, on the one hand, a reduction on second term rents and added on other things which made the payments greater than they were before?—Yes.

51669. Surely the tenants had the option of going into Court?—They could go into Court, but they were asked to sign these papers for the new judicial rents, or otherwise they would have to pay up all arrears.

51670. Not all arrears—they could not make them pay more than two years?—They were threatened if they did not do it they would be put to cost, and they had to sign these papers, and they are now asked to pay 22 years' purchase on what is a rack-rent.

51671. Sir Francis Mowatt.—The object of your evidence is to urge on the Commission that they should recommend powers of compulsion of some sort, by which the Congested Districts Board could purchase compulsorily from the landlords and divide the lands so purchased so as to increase and improve the holdings of the existing holders?—Yes.

51672. Most Rev. Dr. O'Donnell.—Has the scheme conducted by the nuns for improving the houses around Foxford been a great success?—Yes. The parish committee is in charge of that now.

51673. Do you know a good deal about it yourself?—Something.

51674. You don't wish to give special evidence about it?—No.

51675. Mr. Bryce.—Your desire to give compulsory powers only extends to the purchase of untenanted lands?—To the purchase of both tenanted and untenanted lands in the congested districts, because the landlords will not sell in either case.

Mr. James Morrin examined.

Mr. James Morrin.

51676. Sir Francis Mowatt.—You are Chairman of the Swinford Board of Guardians?—Yes. As compulsion and other important matters have been dealt with I will not go over the same ground again. I would like, however, to mention a few points in order that you might be all the more firmly impressed by the very exceptional circumstances prevailing in this union, where famine continually stares the poor people in the face, and no wonder, when we consider that if all the lands within the boundaries of the union were parcelled out in £10 holdings this would leave considerably over half the present landholders

the high road and without a perch of land; the nber of the present holders being almost 8,000, l the valuation of all the land within the union ıg only £34,450.

1677. Sir JOHN COLOMB.—Do you include demesnes that?—I include all the land. This fact alone ws the absolute necessity that exists here to estab- industries of some kind, and if the Government at all in earnest in their apparent desire to im- ve the condition of the people they must found subsidise manufactories, and with a fostering ernment I believe that there are great possibilities n in that way. Certainly the labour is going to te here, and I believe there are numbers of people be found who have money saved and who would ch prefer to invest it in a fairly safe concern at ıe rather than in precarious foreign stocks, but in opinion before this state of affairs can be brought ut the foundations must be laid by the Govern- ıt. We had this question under consideration in timagh about a year since, and a number of the lers of the town volunteered to invest sums vary- from £100 to £300 in any likely undertaking in way of a factory to give employment, but the ject had to fall through for want of sufficient ital. We could raise £1,000, or perhaps £1,500 lly, and when people in one of the poorest dis- ts in Ireland are anxious to do good in this way ly a paternal Government should come to their In districts, such as ours, migration alone will r solve the problem of congestion. The principal, in fact the only agricultural industry we have he raising and fattening of pigs. The Depart- t, no doubt, have done something in the way of roving the breeds, but they have stopped short e—they have allowed thousands of pigs to die made not the slightest move to grapple with the ase. In the whole County Mayo we have only veterinary surgeons, and for all practical pur- s we might just as well have none at all. They ot possibly do the work of the veterinary depart- t all over a county so large.

1678. Mr. O'KELLY.—Who are the two?—Mr. ding and Mr. Hamilton. I would suggest that Agricultural Department should do something in way of providing veterinary surgeons for the try people. They have not done so up to the nt. They are badly needed. I would say we ire a veterinary surgeon for each poor law union.

1679. Is not it so that the veterinary surgeon of Department goes to every single district where Department is at work?—He will go as far as an, but it is impossible for two or three men to d to the whole county.

1680. Tell me any particular case where they ed a veterinary surgeon and he could not attend?—annot call to mind one just at present. I know ne case in which a veterinary surgeon could not ot to attend a cow in Kiltimagh, not even in . A veterinary surgeon was wired for to Sligo, he could not come. The Department, in my ion, should assist the poor people to the best ble market, and as a means to this end I would that bacon factories should be established. I d also suggest, though perhaps against my own ests, that at least three mills for crushing grain ld be established in this union, when small hold- would be enabled to profitably utilise the grain ucts for feeding purposes. Having read in the *ern People* the evidence given in Castlebar by a Kenny, of Cahir, and as I come from the parish fers to, I may be permitted to inform the Com- on that this Mr. Kenny who makes the astound- statement that "there are occasions when these le dare not tell the truth on oath" was himself cuted by the Crown at Kiltimagh Petty Ses- for trying to prevent people from coming for- to tell the truth.

1681. Sir FRANCIS MOWATT.—Was he convicted? ıave got the copy of the order made on that oc- n. The order reads simply "Informations re- ." I have strong grounds for knowing that it on a technical question that this order was made, certainly not for want of evidence.

1682. I only want to know whether the prosecution ded or failed?—Informations were refused.

1683. Was that ruling given by a magistrate?— was not a minute made of it, but it was stated ne time. Here is the documenet. (*Produces ıent.*)

51684. The document is: "Kiltimagh Petty Sessions, 8th May, 1905. The King at the prosecution of John Shankey, Esq., D.L., R.I.C. *v.* Patrick D. Kenny. Summary of Complaint:—That a sworn inquiry was held at Kiltimagh on 21st March, 1905, by Sir A. M'Cullagh, Medical Inspector, to inquire into certain charges against Dr. Burke, and that defendant did unlawfully endeavour to dissuade, hinder, and prevent one William Benson, one Michael O'Brien, and one Michael Benson from attending said inquiry and giving evidence thereat. The court records show that the following witnesses were examined:—Sir A. M'Cullagh, Medical Inspector; T. R. M'Nulty, Clerk of Swinford Union; William Benson, Michael O'Brien, and Michael Benson." The order reads simply 'Informations refused.' "I have strong grounds for knowing that it was on a technical question that this order was made, and certainly not for want of evidence. E. J. Jordan, C.P.S., 2nd Sept., 1907"?—That is the Petty Sessions clerk who was present.

51685. Sir JOHN COLOMB.—Who was Mr. Jordan?—The petty sessions clerk. He was present in court.

51686. Mr. O'KELLY.—Has this any bearing on the case to which Mr. Kenny made reference as to the twelve jurors?—Not jurors.

51687. You heard Mr. Kenny to-day in the witness box saying that upon a certain occasion twelve jurors perjured themselves. I should like to ask you whether you have any knowledge of that?—It was twelve persons, I understood.

51688. Twelve persons perjured themselves in the district. You have intimate knowledge of these persons?—I have; they are neighbours of mine.

51689. What is your opinion of Mr. Kenny's evidence on that point?—My opinion is it is very prejudiced.

51690. Is it your opinion that his statement is true or untrue?—It is my opinion that it was untrue. I have it from a County Councillor who is present in this room, and who can tell you, as he told me, that this same Mr. Kenny offered him a blank cheque to be filled for any desired amount, provided he used his influence to get these poor people to smother their grievances and whitewash his friend.

51691. Sir FRANCIS MOWATT.—A blank cheque?—Yes.

51692. For whatever amount he liked?—Yes. The gentleman he offered it to is here. He will give you more particulars than I can with regard to it. The proffered cheque was refused, and the people told the truth, with the result that Mr. Kenny's friend was dismissed from his position by the Local Government Board.

51693. Sir JOHN COLOMB.—Is this which you have just stated what you were told?—I was told by a County Councillor, who is here present, who will tell you.

51694. Most Rev. Dr. O'DONNELL.—Who is present here?—Yes. I think I need not say much more about this man who brings a charge of perjury against twelve of my neighbours; and were it not that the men of Culthrasney to whom he referred are away in England, I have no doubt they would come before you, and satisfy you that there is not a word of truth in Mr. Kenny's statement to the effect that they told him that the priest said he did not wish them to migrate, lest he should lose so much per head at his collection. There is not a man in the parish who believes it, and those who know the parish priest know that he would be as unlikely to give such advice to his people as those same people would be to tell a lie of their priest, whom they love and revere. I also say that I was present some time ago at a meeting in the Town Hall, when the parish priest, whom this gentleman alluded to, strongly impressed upon the people with small holdings the foolishness of remaining in them all their lives, and said he would take down the names of those willing to migrate, and do his best to get decent dwellings for them elsewhere. In face of these facts it is incomprehensible to me how an outsider and stranger could make the statements made. They are false.

51695. Most Rev. Dr. O'DONNELL.—Did you hear Father Keaveney's evidence about Parish Committees?—Yes.

Sept. 2, 1907.

Mr. James Morrin.

51696. Have you a knowledge of Parish Committees yourself?—I have.

51697. Do you endorse the evidence which he has given?—Yes. They have done an immense amount of good in all districts I am acquainted with. For £100 in grants they get £500 worth of improvements carried out as a rule.

Mr. Thomas Roughneen examined.

Mr. Thomas Roughneen.

51698. Sir Francis Mowatt.—You wish to make a statement?—Yes. I was surprised to see by the *Western People* last week a statement made by Mr. Kenny in Castlebar, and I say there is not one word of truth in that statement. Mr. Kenny, instead of making that statement about others, could have made it about himself.

51699. Is it to you that the blank cheque is said to have been given?—Yes.

51700. Give me the blank cheque he gave you?—I have not got it.

51701. What did you do with it?—I did not take it in my hands at all. There was a case pending in Kiltimagh. I had a case against Dr. Burke, and Mr. Kenny interfered with some of the witnesses whom I had to prove this charge against the doctor. He went round to these men in the country, who came to me complaining of what Mr. Kenny had done, saying they were not required, and he had the whole case settled. He came to me and said—"I have that case settled with those people." "What people?" said I. "The witnesses to come. The whole thing is in your hands. I have a blank cheque here with Dr. Burke's name signed to it," showing me the cheque. "Fill it up for any amount you like." "Go along, you ruffian," said I. I would not take it, and I ordered him out of my place.

51702. Sir John Colomb.—Were you a witness before the Local Government Board inquiry?—I was the person who brought the charge against the doctor.

51703. Is it your case that was made?—It was my case.

51704. It was upon your case that the inspector holding the inquiry gave the decision he did?—I don't understand you. There are two cases.

51705. Were you in court just now when the last witness handed up the document which the Chairman read, in which the decision was "informations refused"?—Yes.

51706. Was that on your case?—No. That was a different case altogether.

51707. What was the decision in your case?—The decision was that the Medical Officer was dismissed. If I had withdrawn the charge against the doctor Mr. Kenny would have gained the case, and the doctor would have been dispensary doctor to-day.

51708. Sir Francis Mowatt.—Of course, this was about as scandalous a thing as any man could do. You stated that in the court, I presume?—No. I was not a witness in the court. It was I brought the charges against the doctor.

51709. You did not state in court that you had been offered a blank cheque?—I was never asked before. There was no necessity. The doctor was dismissed. If I had not gone on with the charge the doctor would not have been dismissed.

51710. Mr. O'Kelly.—Is not it your experience that you find the clergy in the various parishes have been the most zealous in trying to get migrants to go from one place to another?—That is right, and, more than that, I know cases where the priests came and asked me to use my influence to help customers of my own out of the district.

The Commission adjourned.

ONE HUNDRED AND FIRST PUBLIC SITTING.

TUESDAY, SEPTEMBER 3RD, 1907

AT 11.0 O'CLOCK, A.M.,

In the Courthouse, Castlereagh.

resent:—The Right Hon. Sir FRANCIS MOWATT, G.C.B. (in the Chair); The Right Hon. Sir ANTONY MACDONNELL, G.C.S.I.; The Right Hon. Sir JOHN COLOMB, K.C.M.G.; Most Rev. Dr. O'DONNELL; JOHN ANNAN BRYCE, Esq., M.P.; CONOR O'KELLY, Esq., M.P.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. T. W. RUSSELL examined.

Sept. 3, 1907.
Mr. T. W. Russell.

51711. Sir FRANCIS MOWATT (*in the Chair*).—You e, as we know, Vice-President of the Agricultural epartment, and succeeded Sir Horace Plunkett—on hat date?—At the latter end of May.

51712. We have received very full and exhaustive idence both as to the constitution and administration your Department up to the time of your taking er the reins of office. Perhaps, therefore, we need t take up your time by any repetition of the evidence nich we have had already before us. We will take at as the evidence of the Department, and you will then enabled to concentrate whatever observations u wish to offer to us, on any points on which you ve seen fit to make any alteration or contemplate y change in future in the administration of your epartment. We have received a short precis of the ads of the different subjects on which you would e to touch. That being so, perhaps it would be e more convenient course for you to make any statement you desire, and we could ask you any questions at suggest themselves to us as you proceed?—It ould be entirely in consonance with my own view. have been only three months in office, two months which were spent in the House of Commons. I n now engaged painfully mastering the details of hat is a great Department. I will be very pleased deed if you will take the evidence already given officers of the Department as to details, and allow e to make the suggestions which I have in my mind offer.

51713. If you please?—The first thing is—taking e question merely as a matter of business—We have ur Departments working in the same area. I think at is a great waste. I very much doubt whether it conducive to good work. We have, first of all, the tates Commissioners, engaged in the sale and rchase of land, endowed with ample funds—I am t referring to the difficulty of the money market the present time, but, so far as Parliament is ncerned, endowed with ample funds—working with great staff. In the second place, you have the ngested Districts Board, which has been in operation r a great many years, and has done most useful rk in the country. Whilst stating what has curred to my mind as to the facts of the case, I hope at the Commission will not take it from me as being my mind to give evidence in favour of one Department more than another. I wish to avoid that; the her officials are permanent officers. They have atchments; I have none. I approach the matter as a atter of business. The Congested Districts Board s done valuable work with the funds provided by rliament, and with a staff for carrying out the rk. Then we have the Department of Agriculture d Technical Instruction. It has also large funds d a staff; and, finally, we have the County Committees, a statutory body working under the Department. There are four Departments working in the ngested area.

51714. Sir ANTONY MACDONNELL.—The fourth epartment is the County Committee?—Yes.

51715. You have the Estates Commissioners, the ngested Districts Board, the Department of Agriture, and the County Committee?—Yes. As a mere matter of business, and speaking as a business man, I think you have overlapping. You must have it; you cannot avoid it. You have wasted effort and wasted money, and, I take it, the object of Parliament at all events would be to save expense and have the work effectively done without waste of money or energy. The general proposition will not be questioned I apprehend by anyone, but when you come to the remedy of course you come up against a great many difficulties. All these bodies are established, and no body likes to be disestablished, but I have alternative proposals to submit to the Commission. The first is this—I hope that I am not taking the Commission over ground that it has been over before?

51716. Sir FRANCIS MOWATT.—This is new ground to us?—If you were starting *de novo* I should put the purchase and the sale of land into the hands of the Estate Commissioners. I should put the improvement of the land and the development of the estates into the hands of the Congested Districts Board, and I should put the educational work into the hands of the Department and the County Committees.

51717. Mr. O'KELLY.—Are you referring to the congested district counties?—Yes; to nothing else.

51718. Sir FRANCIS MOWATT.—You would then treat the County Committees and the Department as one Department?—They are practically so now; although, let me point out that the County Committees are a statutory body, having their position insured by Parliament quite as much as the Department. They are a local authority, a statutory body, and of course the Department must work with these facts in view.

51719. Mr. O'KELLY—Arising out of that last answer, would you then exclude the Estates Commissioners from the question altogether?—If you would allow me to proceed, I would rather go on a little further before I answer that question. I would rather put my case. The result of two State Departments being engaged in the work of buying and selling the land is, in the first place, inevitably to create an artificial market, but a real one, by which the owners of these slum lands are bound to profit; that is at the expense of the State and at the expense of the people. That cannot be avoided under the circumstances. The landlord is selling his land; he looks for the biggest price he can get. He is not a philanthropist—at least I know of no Irish landlord who has appeared in that role; and he would be very foolish if he did. He is looking for the highest price he can get for the article he has to sell. It follows, when two State Departments are each willing, if not anxious, to buy a thing, they get an artificial market created by the State. I don't object to a market that is created legitimately, but I object to two State Departments competing against each other and raising the price of land. I have said already that the Estates Commissioners have ample funds and a very large staff. That is my case for vesting the sale and purchase of land in the Estates Commissioners. This is my first alternative—I have a second—to the present system. I should then vest all estates purchased in the Congested Districts Board for improvement purposes. I propose to give an example of the confusion that arises by a case close at hand. I will take the new farms

Sept. 3, 1907.

Mr. T. W. Russell.

that have been started at Runabackan. Mr. John Fitzgibbon bought the land and sold it to the Estates Commissioners. I visited Runabackan. As I understand, the position is this—Mr. Fitzgibbon bought this tract of land, of something like 360 acres. The Estates Commissioners came in then, and they have put nine tenants upon the 360 acres. They have given the lands and striped them, and we have farms provided, admirable to look upon, of, I suppose, forty acres apiece. I have seen the nine men. I have seen the lands striped, and nothing could be more admirable. The Estates Commissioners have done that, and, I think, have given each a free grant of £30, although I am bound to say I don't know under what authority. I can understand an evicted tenant getting a free grant. But, at all events, let the authority be what you like, I understood from the men themselves that the Estates Commissioners had made a free grant to each of the tenants.

51720. Sir FRANCIS MOWATT.—To do what they like with or for a definite purpose?—I rather think that it was in lieu of out-offices and houses. The Commission will bear in mind that they have planted these nine men upon forty acres of good land, but bare land.

51721. With no house?—There is no trace of a house or out-office. They have no visible means for providing stock. This is within four or five miles of Castlerea. Let the Commission picture this holding. These men have got forty acres of land each, with no stock, no house, no offices, and a free grant of £30 for some purpose or other, which I suppose the Commissioners intend to be employed for the erection of some kind of a house

51722. You say farmers' sons in your precis. Does that mean that the men who were put on the land had no previous holdings at all, or were merely sons of farmers?—Yes. That opens up a very interesting matter. The question really to be tested there was whether it would not be better for public purposes to take the sons of farmers existing in the neighbourhood and place them upon holdings. The aim is of course to keep the people in the country instead of having them emigrating. From that standpoint I believe it to be extremely effective; for there is nothing more certain than that in two years' time from this every one of these stalwart young men whom I saw would be in America if they had not got that land. Nothing is more certain, on the other hand, if things can be worked, they will be there, comfortable farmers; they will very soon marry; they will get something with their wives in each case. That is what they said to me themselves. They said—"If we marry we shall get a bit with the girl." You thus bring about a new state of affairs altogether. Of course you leave untouched the question of the slum property. The plan has been purely an experiment in that way. My plan would work out in this way. The Estates Commissioners would purchase the land and sell to these men, just as they have done. The Congested Districts Board would come in to deal with the land as an estate, and with the necessity for housing and offices. My theory is, it would take £150 at all events to erect a cottage and out-offices. Of course I know that in England and Scotland it is entirely different, and that that amount would not nearly suffice for a house and out-offices. But things of that kind can be done in Ireland. I should add £150 to the annuity. Provided that the land was bought at a reasonable price, that ought not unduly to weight the annuity, and you at once get the house and out-offices. Then the Department has in this case established at Castlerea an agricultural bank, and the men have got money to purchase their stock; and I suspect that they rely on part of that money and the £30 free grant to build their houses. My theory would be for the Commissioners to buy the land and hand it to the Congested Districts Board to improve and develop the land, the Board or Department to come in with the agricultural bank to lend these young men money to purchase stock at fairs, do drainage, and so forth. That is a particular case at our doors. Apart from the interesting experiment of planting farmers' sons, it shows in a nutshell what I mean by a division of labour. I think it horrible waste that these three bodies should be all working on the same nine men without any co-ordination; and upon that I shall have something to say immediately. Having stated that pretty fully, my next point is that all educational work, such as domestic economy work and things of that kind, should go to the Department. The Congested Districts Board and the Department are both working at that, and there again I see a divided authority, without any practical results, save bad results; and these are costly results. If that is too difficult to work because of the want of co-operation and co-ordination, and I should think it ought to be—perhaps before I pass from it I might give a practical example of what I mean by co-ordination. I presume Sir Antony will correct me if I am wrong. At present Athenry is probably one of the most disturbed districts in the whole of Ireland. That is my own view. I was there a month ago, and I am going there to-morrow or the next day. There are ninety policemen in the district where the Agricultural Department is farming. Building contracts were signed the other day for the erection of an agricultural station or college for the province of Connaught. We are spending many thousands of pounds. We have all our stock, cattle, stallions, mares, boars, everything there for the province of Connaught. We have at present actually twelve or fourteen farmers' sons there learning scientific agriculture. Altogether it looks to me a most promising experiment. We had not been there very long when the demand was made on us to give up some of the land to the people in the neighbourhood. We had taken care of every tenant who was on the estate—that is to say we had enlarged the holdings. We had done everything that was possible for the tenants who were on it, and everybody was satisfied.

51723. When you say "we" you mean the Department?—Yes. We bought 1,600 acres from the Congested Districts Board, upon which we are building this college to commence our work. We took care that no tenant who was on that land suffered in the slightest degree, but that the condition of the whole of these tenants was very much improved. There was no dissatisfaction then. The other day a message was conveyed to London to me that the meadows have been spiked; that is to say, spikes such as you have seen in a croquet lawn had been driven all over the meadow. I saw myself with my own eyes two sacks full of these spikes taken out of the meadow. Of course meadowing was impossible under the circumstances without great expense, and he had to get labour to get the meadows reaped. That was done successfully. Very shortly after it was done the house of the man who was engaged in meadowing was fired into. He was a man of some courage. He did not leave us. He is at work now. I went down myself. There was a threatening letter awaiting me at the hotel, about which I don't care very much, knowing what threatening letters are, though if I had handed it to the police it would figure, no doubt, as an agrarian outrage. I saw the priest and asked him to send to me the men who were interested in this demand for land on our farm. Fifteen or twenty of these men met me at the hotel. It was an informal meeting. I talked to them and told them I was not a landlord, a piece of information they did not require; that the Department had not gone there as landlords, that they had gone there for the benefit of the people of Connaught, and had gone there under pressure, other counties being desirous of having the college. I told them I could give them none of the land, as every acre of it was required for public purposes. But I also told them this, and I said so after inspection, that I had seen the land grievance of the West at Athenry as I had never seen it before; that I had seen grass lands all around the town, with not an outlet save by grass lands; that I had seen that people could not get a bit of land to grow a cabbage leaf upon, or a cow to give milk to the people for their children; that I had learned their children were fed upon black coffee and condensed milk. I said: "You have a grievance beyond all doubt, and what I shall do is this. I shall represent that grievance to the Estates Commissioners, and if possible I shall bring the Estates Commissioners down to see the place." They are to be there the day after to-morrow with me. What I mention this for is to point out that that is one effect of co-operation and co-ordination on the part of these two bodies. If they are to go on, there must be some form of co-operation, some form of co-ordination in their work. Now, I go down there the day after to-morrow, and, as by all the good luck in the world, the whole of the grass land, practically, around Athenry has come into the hands of the Estates Commissioners, I have no doubt w

hall be able to settle the question by co-ordination etween the two Departments. That is a sample of vhat I mean by co-ordination and co-operation. That is one way of settling the difficulty. Another s to allow the outrages to go on until the law has o deal with them promptly and put them down. hat is really the substance of what I have to say s to co-operation. If this cannot be done, I think, hen, that the Commissioners ought to insist upon ne body doing the work in the congested districts. may be the Congested Districts Board; it may be ne Estates Commissioners; but you ought not to ave two Departments buying and selling land in he same district. So far as the Department's work s concerned, I shall have something to say about ost further on, but I don't think the Department ill have any objection to withdraw the supplemenary schemes altogether and leave them to the Conested Districts Board. When I say the supplemenary schemes I am not dealing with the County Comittee schemes, which are statutory. We cannot op them. So far as the Department is concerned, shall not be responsible—and I wish to say it with mphasis—for carrying on the work in the congested istricts area; that is, the educational improvement nd development work which was handed over to us me three or four years ago, with £2,000 to do it. s Vice-President I say I cannot be responsible for rrying on that work. The estimate for this year as £9,700, for which we only got £2,000 from the ongested Districts Board by Mr. Wyndham's arangement. But I say emphatically I would far raher leave the whole work to the Congested Districts oard, and revert to the position we were in before, aving the County Committees to do the work in the unties, and leaving the Congested Districts Board o do this work, unless we get more funds. It canot be done, and I decline to be responsible for it.

51724. You have referred to the existence of four—t perhaps for practical purposes you may call it ree—authorities working side by side?—Yes, if you ar always in mind the distinction between the Deartment and the County Committees.

51725. As regards the Estates Commissioners and he purchase and sale of land by them, the actual urchase and sale of land in the congested districts I understand, now carried on by the Estates Comissioners?—Yes, as far as money is concerned.

51726. When I say the actual purchase and sale, mean the mere legal and court details, but the purase of land, as you have properly called it, is carried on by these two Departments, and you have aised the question whether purchase between he two Departments, does not, in point of act, come to something like an auction; hat each one bids against the other. Should ou say from experience that that is so in ractice, or may we take it that the two Deartments, the Board and the Commissioners, do not, a matter of fact, compete for an estate, but that he buys one estate and one another, and that except hat they are two persons or two Boards in the market here is no real competition between them?—No; e form of competition is of quite a different charac-r. I don't say that it is an auction with the two partments competing for an estate. It is nothing the kind; but I think you will find that land purased by the Congested Districts Board is purchased r a slightly higher figure than land purchased by e Estates Commissioners.

51727. Therefore the suggestion is that the knowdge on the part of the Estates Commissioners that e Congested Districts Board are likely to buy up a certain standard induces them to offer a higher andard?—Whatever is the machinery by which the ing is worked, undoubtedly it happens that a larger ice is paid.

51728. Then you point out as the next thing, and perally I entirely agree with you, that the work of imoving and developing the land is at present carried t on somewhat different principles by two different partments in the same area, and you advocate at it should be done by one Department, and on e one scale?—Certainly. I give no opinion as to e Department at all. I am a member of the Conted Districts Board, and I have no element of preice as between them, none whatever.

51729. Again, as regards the educational and delopment work, you have suggested that should be left to your Department?—I say to either body, but not both. I am prepared to withdraw if we cannot get more money.

51730. Then again, whichever the Commission may eventually suggest should take it in hands should have the subject committed to them to be dealt with by them alone?—That is my opinion.

51731. Sir ANTONY MACDONNELL.—Reverting to the Athenry case, you cite that case as an instance of the want of co-ordination between the two Departments?—I don't know if it is co-ordination. I think it is more co-operation.

51732. Want of co-operation between the two Departments; in that case between the Department of Agriculture and Technical Instruction and the Estates Commissioners?—Yes.

51733. The facts of the case were these: that the estate in question was bought by the Congested Districts Board from Mr. Goodbody for the purpose of migration. It was untenanted land. The Agricultural Department considered that the estate was well suited for the purpose you have mentioned, an agricultural college, and approached the Congested Districts Board with a proposal to take it over; and it was transferred to them. Now the duty of the Estates Commissioners lies in one of two directions. It is either to validate the transfer of land from landlord to tenant or to buy from the landlord land which under a particular section of the Act the landlord offers to sell. There could be no co-operation between your Department and the Estates Commissioners in this case unless land in the neighbourhood of Athenry had been offered to the Estates Commissioners?—I agree with you.

51734. They cannot, therefore, come into operation in that case unless they had been moved by the landlord either selling to the tenant or selling direct to the Estates Commissioners. Now, the circumstances were, you had the town of Athenry, as you said, surrounded by grass lands on all sides?—Yes.

51735. The inhabitants of the town are anxious to get some of this grass land for the purposes you have mentioned?—The necessities of life.

51736. The necessities of life, as you say, gardens, the pasturage of a cow, and so forth. As the law at present exists, it is, I suggest to you, absolutely impossible that that can be carried out, and that the wish of those town tenants can be complied with, unless the landlord decided to sell them?—I don't know whether you have got my meaning. What I point out is this. I think almost all the estates around Athenry, the untenanted land, have come into the possession of the Estates Commissioners. The Caherogan Estate, the Lambert minors Estate, and other estates have come into their hands.

51737. As a matter of fact I am inclined to think that the Lambert minors Estate has not come into their hands yet, but it is in process of sale. But at all events my point is this, that you say there has been a want of co-operation between two Departments, and I point out to you that there can be no co-operation between the two Departments unless the Estates Commissioners have purchased the lands?—They have in this case. The Caherogan Estate has been purchased.

51738. Is that in the immediate neighbourhood?—It is the closest of all the estates to Athenry. I have been there.

51739. You speak of a matter in your own knowledge when you say it has been bought?—Yes. My point is that the co-operation comes in here. Suppose I had told these people in Athenry, "I can give you no land because in the first place I cannot alienate the land from the purpose to which it is devoted, and you have got no remedy; you must go in your misery and discomfort"——

51740. Where does the question of co-operation come in?—It comes in here. The day after to-morrow the Estates Commissioners are to meet me at Athenry for the purpose of dealing with this question. I have been able to get their co-operation.

51741. Co-operation for what?—You are in possession of a certain estate there. You have got no power to go outside the limits of that estate. So what you really suggest is that you have called to the notice of the Estates Commissioners that it would be desirable, in the general interests of the country, to give to these town tenants certain plots. That is what you have done?—Yes.

Sept. 3, 1907.

Mr. T. W. Russell.

51742. That is not the co-operation of the Department. It is your own individual but most admirable suggestion; but it is not the co-operation of one Department with another?—I beg your pardon.

51743. You cannot do anything. It is the Estates Commissioners who can do it?—Is not that exactly what I told them? I said: "All I can do is I shall bring this before the Estates Commissioners officially. I shall even go the length of asking them to come down and meet me, as Vice-President, and see if we cannot get something."

51744. What can you do as Vice-President?—Simply call the attention of the Estates Commissioners to the matter.

51745. You can do that as Mr. T. W. Russell?—I did not do it as Mr. T. W. Russell.

51746. You had no more power to enlist the co-operation of the Estates Commissioners than you had as a private individual?—All I can say is, acting as Vice-President, concerned in that part of the country where trouble was upon our own land, I acted officially. I called the attention of the Estates Commissioners to the possibility of settling this difficulty, and I shall take the responsibility.

51747. There is no responsibility in the matter at all. What I am bringing out is this, that you say there is a want of co-operation between the two Departments, and you cite this particular case in Athenry, in which the question of co-operation between the Department and the Estates Commissioners does not arise. The question of your suggestion to the Estates Commissioners that they would act in a particular way does arise, but it would arise from the action of any other individual?—I did not act as an individual. I acted on my own responsibility as Vice-President, and I take the responsibility.

51748. Sir Francis Mowatt.—Perhaps I may suggest this one observation; even so, it is an example, and an admirable example, of co-operation?—That is exactly what I intended, and never anything else.

51749. Mr. Sutherland.—It is nothing more than the usual co-operation that is desirable between Government Departments?—Yes, but which does not exist in Ireland, which is not like Scotland or England.

51750. Sir Antony MacDonnell.—I may say that when you become more largely acquainted with the work of the Congested Districts Board, of which you have become a member, you will find that that sort of co-operation does exist. You will find, still further, that an arrangement has been come to, for instance, in the purchase of estates, that where there is a particular estate which the Congested Districts Board requires, and the Estates Commissioners are in treaty for it, that communications pass between them, and one assists the other in getting possession of the particular estate. In those ways co-operation does arise?—Will you allow me to give you, from the Act of 1899, an example of what I mean. The Act of 1899, under which the Department is set up, contains a clause forming a consultative Committee on education. The Vice-President is the Chairman of that Committee. There is a member from the National Board, and a member from the Intermediate Board; and that is the real thing that I have in my mind here, that we want some plan that when one Department is conducting the work of another there will be some official method of getting the Departments into communication.

51751. Most Rev. Dr. O'Donnell.—How often does that Committee meet?—It has met several times. It will meet oftener in the future, if I have anything to say to it.

51752. Sir Francis Mowatt.—Permit me to assure you that I personally, and I believe that I speak for my colleagues, am extremely anxious that the utmost co-operation and the utmost harmony should prevail between every Department engaged in the matters that we are considering; and I am sure I may go further, and say that no recommendation which this Commission is likely, or, I may say, sure to make, will be founded upon anything but that basis?—That is my object.

51753. Sir Antony MacDonnell.—You make the suggestion that all the purchase and sales should be carried out by the Estates Commissioners. It is not a suggestion which has been made to this Commission for the first time?—I am not responsible for that.

51754. It is a suggestion which is already before the Commission. In the purchase of land, would you think that any advantage would accrue if, having in view the ultimate destination and distribution and treatment of the land, the price should be determined with reference to that fact?—I don't know that I quite appreciate the point.

51755. Where you purchase a property, would it not be desirable to have in view the amount of the price which you can recover by the re-sale of the property again?—Decidedly.

51756. Therefore you probably agree that if the purchase is effected by a Department which has nothing to do with the recovering of the purchase money afterwards, or the assessment of the annuity, there would probably be a higher price given than if it were purchased by the Department which was responsible for the ultimate treatment of the property?—It is quite possible.

51757. If that be so, don't you think it follows that the Congested Districts Board, which has to assess the annuity and spend money upon the property, would be a better purchasing authority than the Estates Commissioners?—My alternative was that one or other should do it, but not both.

51758. Which would be preferable?. Would you be disposed to give an opinion upon that?—No.

51759. In regard to the working of the Agricultural Department, you say you consider you would be unable to carry out the work of education with the funds that have been transferred to you?—Yes.

51760. Whom do you look to for an increase of funds: do you look to getting an increase of funds from the Congested Districts Board?—I think not. The principal matter for discussion at the Congested Districts Board since I have been on it is how to get funds for its purposes and not to give away any more.

51761. The only other resource is from the funds of your Department or from an additional grant from the Government?—Certainly.

51762. You say that you cannot do it from the funds of your Department?—No; not in justice to other parts of the country. We got £2,000, under Mr. Wyndham's minute, from the Congested Districts Board when we took over the work. The estimate for this year, which was passed by the Agricultural Board the other day, is £9,700. Of course we cannot go on at that.

51763. Was I right in understanding that you thought it better that the work of education in congested districts should be carried on by the Congested Districts Board?—By one or other, the Department or the Congested Districts Board, but not by both. That is, so far as it does not affect the County Committee work. The supplemental schemes should be carried out by one or the other.

51763A. Have you considered the question of excluding from the congested districts altogether the operations of the Estates Commissioners, and making the Congested Districts Board the sole exclusive agency for the purchase, improvement, and distribution of land in the congested districts?—So long as you have one authority you may take your choice, so far as I am concerned.

51764. At present the Estates Commissioners are capable of buying land in a congested district. A landlord in a congested district can approach the Estates Commissioners and they can purchase his estate. Would you be disposed to allow that to continue, or would you exclude the Estates Commissioners altogether?—I would have one authority in the congested area for buying and re-selling land; whichever authority the Commission chooses.

51765. That would be in the hands of the Congested Districts Board?—Whichever authority is selected as being the authority for the purpose.

51766. Would you have the purchase and re-sale of land carried out by the same authority?—Yes.

51767. Then your proposal that the Estates Commissioners should purchase land must be conjoined with the further proposition that they should re-sell that land?—Yes; that is what they are doing now in other places. They re-sell land.

51768. Not when it comes under the work of the Congested Districts Board?—No.

51769. You propose that the Estates Commissioners should buy, and that then the Congested Districts Board should come in and improve?—Yes.

51770. And then that the Estates Commissioners should re-sell?—That is my first scheme. My first scheme is a division of the work. My second is,

should the first be impossible, whatever you do, have one authority for the whole thing.

51771. It might of course follow then that when the Estates Commissioners buy the property, say for £10,000, and the Congested Districts Board expend money upon that, the Estates Commissioners would have to re-sell it for, say, £15,000, in order to cover the expenditure?—I think that that is rather a fanciful calculation.

51772. I am only giving you an illustration?—Yes; but I don't think that it is an illustration upon which you can found an argument.

51773. Is it not an illustration of your meaning?—I did not mean anything like that.

51774. It is an illustration. It might come to pass that the Estates Commissioners might have to re-sell, and place upon the tenant an annuity which was infinitely greater than the amount they paid for the property?—Yes; and that is the argument for my second alternative of one authority to do everything in connection with the purchase and re-sale.

51775. Sir Francis Mowatt.—Perhaps there has not been a complete understanding between Mr. Russell and Sir Antony, and I would just point out this. I understand that, as representing the Agricultural Department, you do not feel in a position to say that this one body which should do the purchase and re-sale should be the Estates Commissioners or shall be the Congested Districts Board?—Certainly not.

51776. But your alternative, to which, I gather, you attach importance, is that there shall not be two?—Yes. If you reject my first scheme of division, then, whatever you do, let us have one authority.

51777. Sir John Colomb.—You have stated that, in your opinion, the present system of so-called competition between the two bodies leads to paying an over-price for properties?—I think that the whole system is an over-price, if you like to take it that way; but what I say is that the two Departments buying land create an artificial market. The one may offer more than another. As a matter of fact that has come about, I understand.

51778. Can you give a concrete case where the operation of the present system has led to an over-payment of price; or can you give any fact on which you base the assertion of over-value?—If you take me into the question of over-value, I have very distinct views that the whole thing is over-valued, whichever Department buys or sells.

51779. You are not prepared to give a concrete case where an over-value has been paid for land?—What I will say is this. I mean by over-value——

51780. More than it is worth?—At the Congested Districts Board the other day there was a proposal for the sale of Sir Henry Lynch Blosse's Estate. I said to the gentleman sitting next me—"that is an extraordinary price for land." It staggered me; I had not seen anything like it.

51781. Most Rev. Dr. O'Donnell.—Was it an offer from the Board?—I understood it was one of the settled estates that the Board had consented to buy, and the price was all set out.

51782. Sir Antony MacDonnell.—The estate has not been even inspected. It was really a demand from the owner?—Well; that is quite sufficient for my purpose.

51783. And a man always asks more for land than he will take?—It seemed to be a startling price for what is a slum estate.

51784. Sir John Colomb.—What I again ask is if you can give the Commission a concrete case of an over-price being paid for land in consequence of the competition of the Departments for that land?—I think both departments pay far too much for slum lands.

51785. Can you give me a concrete case of excessive prices having been paid due to the competition of these two Departments?—I have seen cases where the Congested Districts Board were reported to have given more than the Estates Commissioners.

51786. That is not my point?—That is my point.

51787. My point is, I want the name of an estate, giving a concrete instance to the Commission of where a higher price than ought to have been paid for and has been paid owing to the competition of the two Departments?—I think they both pay much too high a price.

51788. Your remedy to get rid of the state of things that impresses you is to vest the educational work in the County Committee?—No; I never said that.

51789. You pointed out that there are now four Departments—you call the County Committee a Department for that purpose—operating at much the same work. You then passed to the remedy, and as I understood your remedy was this, that the purchase and re-sale of lands was to be vested in the Estates Commissioners, and the improvement and development of land was to be vested in the Congested Districts Board, and that the educational work was to be vested in the County Committees?—No. The County Committees are working in these areas, and the Department is doing supplementary work, on which it is spending close on £10,000 a year. I don't propose to take away their work from the County Committees. It would be impossible, because they are statutory bodies, and I do not propose to touch it in anything that I say about these areas; but what I said was that I would prefer that the educational work that is included in the supplementary schemes should be done either by the Department or by the Congested Districts Board.

51790. You are aware of the constitution and work of the County Committees?—Yes.

51791. Do you consider their work supplementary work?—No. I should not touch it. It is most excellent work.

51792. Do you agree that in the introduction of the Department's supplementary work there was some overlapping of the work of the Parish Committee?—That is my point. The Department is carrying out these supplementary schemes now. The two bodies do the work now.

51793. Are they operating through Parish Committees?—They are working. They do all that work. They are spending £10,000 next year on supplementary schemes, educational and otherwise.

51794. Are they associated with, or are they overlapping in certain matters, the action of the Parish Committees?—I think that overlapping is very general.

51795. My concrete narrow point is that there is work voluntarily carried on under the auspices of the Congested Districts Board, through the Parish Committees, as to which we have overwhelming evidence that it is producing most admirable results?—I have no desire to interfere with it.

51796. You would not on any account touch those?—No; that is not the work of the Department.

51797. Then how would you distinguish between the work of the Parish Committees and the work done by the Department?—I think the work of the Parish Committee is most admirable. There is a Parish Committee formed, and there is a proposal to give a small grant to a farmer for building out-houses, putting on a slated roof, putting in wooden instead of earthen floors, or windows that will open instead of windows that are closed permanently. Small donations are given towards those objects. That is not the work of the Department, but it is very admirable, and I don't wish to interfere with it.

51798. My reason for putting the question is that we have got a considerable amount of evidence from those who work the Parish Committees advocating an extension of the work; for instance, instruction in agriculture and all those things; and, if the Commission were to agree that the work might be extended for the purpose of supplemental work, such as instruction and help in agriculture, then, if that proposal were adopted, your Department and the Committees would overlap?—Certainly.

51799. The next question is the question of the property bought by Mr. Fitzgibbon—360 acres—which you so clearly and tersely described in dealing with the overlapping. In giving that as an illustration, you said the object of those Departments was to keep the people at home?—I should say it was. It is the object of my Department at all events.

51800. But, primarily, is it not the object of the Congested Districts Board to fix its whole attention upon the relief of congestion. The consequence may be to keep the people at home, but the sole object of establishing the Board was to relieve congestion?—I was in the House when the Act was passed, and I would not like to bind myself to a proposition of that kind; but, substantially, it was so.

51801. Is it not so, whatever the intention may be, that the work of the Congested Districts Board is concentrated upon one great main object, which is the relief of congestion?—You mean by that the buying of slum properties to improve them.

Sept. 3, 1907.

Mr. T. W. Russell.

51802. I am putting the question generally. I understood you to state that the general object was to keep people at home. My point is this, that the primary and definite object of the Congested Districts Board is to relieve congestion, though the indirect result may be to keep people at home?—That is substantially the case.

51803. The reason I ask is this—was there any uneconomic holding on this 360 acres?—None.

51804. Were there any uneconomic holdings in this immediate neighbourhood?—Not that I saw. I motored all over the place and I did not see any. I saw very few holdings at all. It is all grass.

51805. Assuming that the land is bought in the neighbourhood of uneconomic holdings, do you say that the object of the purchase of that land, with the aid of State money, should be to re-settle farmer's sons, or to relieve congestion in the neighbourhood?—That opens up the whole question of policy. In this particular case there is a great deal to be said for it. From the standpoint of the Congested Districts Board work, there is a great deal to be said against it. I fear in all these things a great many plans are necessary before you get to the end.

51806. But in the neighbourhood of a district where there is congestion, and grass land is acquired by any Department, with the aid of State money, do you think it a primary necessity to relieve congestion before you settle farmers' sons?—I think that that is the prime duty of the Congested Districts Board.

51807. I may take your answer to be this, that, while the action of the Congested Districts Board in buying estates, and buying untenanted land must be for the relief of congestion, the Estates Commissioners may buy it for the purpose of settling farmers' sons, and may ignore congestion?—That may be, and I think it very foolish for them to be working against each other in that way. It all comes back to the one point, that you must have a single authority.

51808. The Congested Districts Board would be operating for the relief of congestion; the Estates Commissioners would be operating with the object of giving land to farmers' sons. Those are not the same objects?—Certainly not; but on the other hand I think there is a tremendous lot to be said for it.

51809. Mr. SUTHERLAND.—To my mind the important point of your statement with regard to the operation of two bodies buying and selling in this area is that it puts up the price of land?—It must have that tendency.

51810. Almost invariably, in the great mass of evidence that was given before us by the representatives of the Landowners' Convention, they preferred dealing with the Congested Districts Board to the Estates Commissioners?—I am certain they would.

51811. A reasonable inference may be drawn from that?—I would do it, at all events, as a Scotchman.

51812. Sir ANTONY MACDONNELL.—What is that inference? That they are given more by the Congested Districts Board?—I am not saying anything against the landlords. I say that in order to put myself right with Sir John and other friends in the matter; but if I find the landlords having the choice of two bodies to dispose of their land invariably choosing one, I draw my own conclusion.

51813. Are you aware that they get their money from the Congested Districts Board in, let me say, a year, while they cannot get their money from the Estates Commissioners until the lapse of three or four years?—I think if they get a better price from the one they will wait for their money.

51814. That is your opinion?—That is my opinion.

51815. Most Rev. Dr. O'DONNELL.—Have you yourself any special knowledge of the way in which congestion might be relieved?—I have been a close student of this question for thirty years.

51816. Have you ever lived in a congested district?—I have not, but I have gone over the congested districts.

51817. Have you taken any practical part in the work that has gone on for the relief of congestion?—The only part I have taken in that matter was as a private member of Parliament in the House of Commons, and as a journalist, in exposing the miseries of the western population. If you mean to ask me whether I am an expert in dealing with congestion from the practical standpoint, such as Mr. Doran is, I am not, and never pretended to be.

51818. Don't you think that the views of those who are practical men are of the first importance in dealing with this delicate matter?—I think so, as in all other matters.

51819. You put before us two plans for the purchase of lands with the object of relieving congestion. In the forefront you put the plan of all purchases being made by the Estates Commissioners, and the work of remodelling the farms being done by the Congested Districts Board?—That is the improvement and development of the land by the Congested Districts Board.

51820. You put that in the forefront?—Yes.

51821. Is it in the forefront after your examination by Sir Antony MacDonnell?—That is for the Commission to say.

51822. Do you still put it in the forefront, because if you do I have a question to ask you about it?—I am entirely indifferent as to which of the plans is preferred.

51823. Then I feel bound to ask you some questions about it?—I myself prefer the one authority.

51824. This is a matter of tremendous importance, and I want to see how you would work out the scheme. Do you say it is a feasible thing that the Congested Districts Board should improve land and then sell land which it has not bought, but which another has bought for it?—It should not be impossible. It may be difficult.

51825. Is it a feasible and useful plan?—I think with co-operation yes; without it, no.

51826. I invite you to describe the process?—The process would be that the land would be bought.

51827. I will help you; I will ask you questions. Would the Congested Districts Board, before fixing on the land which it wanted, have an inspection of the land?—It would be inspected by the authority purchasing.

51828. Is not the Congested Districts Board the authority for relieving congestion?—Yes, by statute.

51829. Then it may desire certain lands?—Yes.

51830. Before it goes to the Estates Commissioners to ask them to have these lands purchased it will have these lands inspected?—I should imagine that the authority——

51831. Please answer the question?—It is not a question for answering yes or no.

51832. We are engaged in this work; we ought to know how to do it. Will the Congested Districts Board express a desire to acquire lands without having surveyed the lands?—They will know that it is a slum estate, and they would express their desire to the Estates Commissioners to get that land.

51833. On what will that desire be founded? Will it be survey or inspection?—They will see that it is a locality in which there are uneconomic holdings. They desire to purchase that land, and the purchasing authority will inspect it before paying the price.

51834. In reference to the grass land which the Congested Districts Board requires for its purposes, will the Board inspect that land before it expresses its desire?—It may.

51835. Ought it?—I think it ought. That is for the Act of Parliament.

51836. Will the Estates Commissioners, before they buy that land, inspect it for themselves as to price?—Certainly.

51837. You want to avoid complications. You have the officer of the Congested Districts Board inspecting as to whether the Congested Districts Board would desire that land, and you have the officer of the Estates Commissioners inspecting for price. Is that simplicity?—With co-operation between the two authorities.

51838. That is not simplicity?—I don't see why it is not. With cordial co-operation between the two authorities I don't see any difficulty in its being carried out.

51839. The Congested Districts Board go to the Estates Commissioners, and the Estates Commissioners buy the land. In whom is it vested? Is it vested in the Estates Commissioners or in the Congested Districts Board?—My theory is to use the Congested Districts Board, after being purchased, for improvement purposes.

51840. Who collects the rent during the improvements?—The Estates Commissioners are bound by law now. They collect the rent for all land.

51841. The estate is vested in the Congested Districts Board, and the Congested Districts Board are

proving it, but meantime the Estates Commissioners are on the ground collecting the rents?—It is the same as with the estates sold now. The Estates Commissioners are collecting millions of money.

51842. But the actual organisation?—Not only the organisation, but the administration.

51843. Therefore while the improvement works are under one authority a different authority is interesting, collecting the rents and administering them? That is the authority that buys it.

51844. When it is a question of selling to the tenants, who fixes the annuity?—That must be the Congested Districts Board.

51845. The annuity is fixed by the Congested Districts Board that had nothing to do with fixing the original price?—You are assuming that the two bodies who are charged with this difficult duty are to remain apart, with no relation between them. I am providing for co-operation and co-ordination between them. If it is to go on in that way, I say let either one or the other have it, if that can be worked.

51846. I want to know have you that plan still in the forefront: the Estates Commissioners buying and the Congested Districts Board remodelling the farms? I think there are difficulties, but they are not insurmountable.

51847. I want to know are you able to defend it?—I would think that I could work it.

51848. You have said that under that arrangement the Congested Districts Board would fix the instalments for the tenants purchasing?—Of course the instalments must be fixed in view of the cost of reclaiming the estate and the price paid for the land.

51849. And the poor unfortunate Board would have to do all that without ever having had a word to say to the price of the estate?—That is assuming that I will not assume, that it was all to go on in the way it goes on now, without any co-operation or co-ordination.

51850. You gave the Athenry case as an instance to illustrate the want of co-operation, and some great thing is to occur in the course of a couple of days when this co-operation is to be started for the first time. Are you aware that the estate there was purchased by the Congested Districts Board?—Yes.

51851. You talk about the prices paid by the Congested Districts Board. Are you aware that the purchase of that Goodbody Estate was, comparatively, a good bargain?—I cannot refer to things I know nothing about.

51852. Inquiry into the purchase of that estate, into the price that was paid for it, would not carry you beyond the sixteenth century. Take it from me that it was a good bargain, and that your predecessor came to the Congested Districts Board, and that through co-operation, and I would say renunciation, with the effect of co-operation on the part of the Congested Districts Board, that good bargain, which was very valuable for the relief of congestion, was handed over to your Department. Is that co-operation?—Yes.

51853. Now I want to ask you about this. Do you approve of the way in which that land handed over to your Department has been turned to account in Athenry?—In what way?

51854. What class of land have you kept for the College—rough and smooth?—We kept very good land.

51855. For the College to train the young men who are to go on the rough lands of Connaught you have kept the plums of the whole estate?—Let me point out that we put a great deal of the land into tillage.

51856. Why did not you keep the rough with the tillage?—I had nothing to do with that. I was not there. I am only two or three months in the office, and I have no knowledge of this. But let me say this: for the purposes of the Department, for training the stock for Connaught you could not get the rough land. What I have satisfied myself upon is that they did fairly by the tenants who were upon the estate. They have enlarged their holdings. I have been there and have seen them.

51857. What class of land did you give them?—The land they were on, with additions to it.

51858. What kind of additions?—Good and bad. I gave to one man, for example, who was on it. He had got thirty acres of land, and he told me some of it was good, and some of it was poor land; and I suppose that that is the case with the whole of them.

51859. You spoke about overlapping. Do you speak from your personal observation or merely repeat a statement made by other witnesses?—No; I know this, that the Departments do overlap.

51860. Where?—In Mayo.

51861. What has caused the overlapping?—That is another matter.

51862. Has the Congested Districts Board caused it?—Your lordship takes it that I am only dealing with facts that have come under my own observation and have come here to place these facts before you.

51863. What are the facts that have come under your observation?—For example, I remember the other day two schools of domestic economy were sanctioned by the Board of Agriculture in Dublin.

51864. Two schools?—Yes; and I found that there was another school under the Congested Districts Board so close that they must overlap.

51865. Do you say that your Department acts in that way, with so little care as not to make inquiries when establishing domestic science classes, as to whether the Congested Districts Board has a class in the locality?—That is quite possible I think, under the present system.

51866. It is possible under no careful system?—It is very likely to happen.

51867. It is a thing that ought never to happen?—That is what I want to secure.

51868. I may point out that in its whole history the Congested Districts Board has never gone in where a class already existed and established a class of its own. That is the only kind of overlapping you know of. Now, about the purchase from Mr. Fitzgibbon, what do you bring that forward to illustrate?—What I bring it forward to illustrate is that here are the Estates Commissioners purchasing the land for these people.

51869. Was it to illustrate the good way that the Estates Commissioners did the work?—The Estates Commissioners purchased that land for these people and left them there, with not a house, not an out-office, and not a head of stock or anything else. Of what use is that to anybody? I did not bring the Congested Districts Board into this at all. I say that if I was working it out myself under the scheme that I outlined, the Estates Commissioners would have bought the land, the Congested Districts Board would have improved it and developed it, and would have even fixed the price, and the Agricultural Department would have started a bank to enable these people to get stock. That is my point. I will not say they have left anything undone.

51870. The Congested Districts Board on that estate would buy the land, and improve the land, and put down its migrants, and it could do all itself. It would not need the three Departments?—I would be perfectly satisfied with that arrangement.

51871. Sir Antony MacDonnell.—You say that absurd prices are paid for land in every district?—Certainly.

51872. You stated a short time ago that the inference you drew is that the Congested Districts Board pays a higher price for land than the Estates Commissioners. Let me call your attention to the fact that in the year 1903 the average price which the Congested Districts Board paid for tenanted land was 17¾ years' purchase. In 1904 it was 18¼, in 1905 it was 20½, in 1906 it was 19½; which in every case is lower than the price which the Estates Commissioners paid for untenanted land. This contradicts directly your statement that the Congested Districts Board pay more for land than the Estates Commissioners?—Do you think that that settles the question—taking an average like that?

Sir Antony MacDonnell.—Certainly. I think, if you talk about the price that is paid, your evidence is generally taken to be the average price.

51874. Sir Francis Mowatt.—Perhaps I may draw the attention of the Commission to what is somewhat important. Whatever obstacles or difficulties may be found in the way of Mr. Russell's first proposal, he is quite content to waive that proposal and to accept a general arrangement that there should be one operating Department doing the whole work itself and not in competition with the other?—That is so; but I felt bound to put before the Commission these schemes as alternative schemes.

Sept. 3, 1907.

Mr. T. W. Russell.

51875. Most Rev. Dr. O'Donnell.—Have you seen the work of the Congested Districts Board in improving estates?—I was all over the areas twenty years ago, and there is nothing which gives me greater satisfaction or greater pleasure than when I drive through them now, and see the enormous improvement that has taken place. I said so in Parliament the other day. I have been all over the Dillon and DeFreyne Estates from the very beginning of this thing. If the Bishop thinks I have any prejudice against the Congested Districts Board I tell his lordship to get rid of the idea. No one appreciates this work more than I do, and if the Congested Districts Board is going to take over all this work in the congested districts area, I only say—don't make two bites of a cherry; do it, and don't have these different Departments working alongside of each other.

51876. No; I have no such idea at all, but I have this feeling, that the longer one is mixed up in this work of the Congested Districts Board, and giving some service to it, the more he will be opposed to dislocating arrangements that work out even at second best, for the sake of what may turn out to be only a theoretical advantage?—Don't take me as advocating theory as against the reality, for I admit the reality most cordially; but I do say that this work is going on in this way. In Heaven's name, let us have either one thing or the other.

51877. About this preference of landowners for the Congested Districts Board, I don't know what the point is. My own observation is this. Undoubtedly it arises from the representatives of the landlords, who came before us, being strongly of opinion that the work of the Congested Districts Board should go on, but I don't recollect that they suggested that the Estates Commissioners should be superseded?—My lord, I made no suggestion upon the point.

51878. Mr. Sutherland.—It was made on my authority, and the record will show it?—I only answered you with reference to human nature.

Mr. Sutherland.—The preference was given by landlords to the Congested Districts Board purchasing, to the Estates Commissioners.

Sir Antony MacDonnell.—The prices are here on record. There is no mistake about them.

51879. Mr. O'Kelly.—I would not like to ask you to account for the general distrust of the Estates Commissioners by the Irish landlords?—That would take me a little further than I ought to go. I am also a politician, and I would rather not go into that.

51880. Sir Antony MacDonnell.—I might call your attention to this fact. You stated, in reference to your alternative proposal, that the Department might withdraw from the work of agricultural development and education in congested areas?—So far as the supplementary schemes are concerned.

51881. And leave the supplementary schemes to be carried out by the Congested Districts Board?—Yes.

51882. I call your attention to the fact that the point was very carefully inquired into by Sir Kenelm Digby's Committee, and you will find, in several parts of the report, his strong disapproval of that as it would mean a reversion to the confusion and overlapping which existed before the change was made; so that according to that inquiry, the very evil which you want to avoid would be introduced by the suggestion which you make?—That does not affect me in the least.

Mr. O'Kelly.—Might I suggest to you this, in regard to the report to which Sir Antony has made reference, that, at any rate in this part of the country, no confidence of any sort or kind was placed in this Inquiry, because it was felt that it was merely for the purpose of whitewashing certain people.

51884. Sir Antony MacDonnell.—This is a mere fact. I am not going into the general character of the report. This is a mere statement as to a matter of fact; whether a particular proposal would lead to overlapping, or the contrary?—Apart from the report altogether, on which I have no desire to enter—the report is there, and can speak for itself—I desire distinctly to state, as the Vice-President of the Department, that we cannot be responsible for these supplementary schemes, which involve a cost of nearly £10,000 a year, when we have to go on with a donation of only £2,000 from the Congested Districts Board. It is not fair to the County Committees.

51885. I quite agree with you?—You may take that as a fact from me.

51886. That is not in doubt at all. It is only a question of principle, whether or not the system which you suggest would be productive of overlapping and confusion, or the avoidance of it?—Who gave that evidence?

51887. Professor Campbell gave very strong evidence on that point?—I don't see how to vest the work in one authority will cause overlapping, though I don't see how vesting it in two authorities may cause it. At all events I am quite clear that it cannot be done as it is now.

51888. Mr. O'Kelly.—You find you have to devote all your time to the work of your Department?—Certainly. I should not have gone to it if I had not been prepared to do it.

51889. It is a most responsible office, and of course takes up all your time. That being so, do you think the Vice-President of the Department, speaking entirely in the impersonal sense, ought to be a member of such an important body as the Congested Districts Board?—Indeed I do; and so far it carries out the theory that I have of co-operation. I may not be of much use, but I certainly find out what is going on, and I should very much deplore any legislation that would put the Department and the Congested Districts Board more asunder. That is at all events one link to bind them together.

51890. Do you have that co-operation now?—I attend meetings of the Board so far as I am able. I cannot be in two places at the same time, but I have attended two meetings since my appointment.

51891. The Under Secretary for Ireland for the time being is also a member of the Congested Districts Board?—Certainly.

51892. Don't you think he has enough to do in his own particular office?—I am not the judge of what he has to do.

51893. Let me suggest to you that the office is one of great importance, and involves great responsibilities. Don't you think he would not be able to give the necessary time and attention to the work of the Congested Districts Board?—If you wish my opinion on the abstract question, I think it of great importance that there should be a representative of the Government there.

51894. Would not you say that the Chief Secretary for the time being would discharge that function?—No. The Chief Secretary is not in the same position as the Under-Secretary. The Under-Secretary is supposed to be resident in Dublin. The Chief Secretary is not. As I understand, the Under Secretary is supposed to represent the Chief Secretary. I don't think that the Congested Districts Board suffers from these official members.

51895. Observe, I am not referring to Sir Antony or to you. I want to get some light as to whether the present constitution of the Congested Districts Board is the best constitution. Have you any suggestion to make as to any alteration that might be made with advantage in the constitution of the Board?—I have not considered that. I am much to short a time with the collar on, and the Commission will please bear in mind that the Vice-President has to be in Parliament as well as in Dublin, and it is not possible to get at everything in three months. I really have no suggestion to make as to the improvement of the personnel of the Congested Districts Board.

51896. I am not talking of the personnel, but of the constitution?—Nor of the constitution.

51897. Might I suggest to you that the work is of such immense importance to the country that if the Board is to stand you should have the constitution so altered that you would have continuous supervision over its work?—My answer to that must be that my experience of the Congested Districts Board as a member is too brief for me to venture to offer an opinion upon that. If I am allowed to speak of what I have known as a politician for the last twenty years, I think that the work of the Board has been beyond all praise. I cannot put it more strongly than that.

51898. But you see some advantage in continuous supervision over the work of the Board?—Of course I do. I cannot conceive work of that character being carried on without supervision. It is not carried on now without supervision.

1899. I know that, but you cannot have it abso-
ly continuous on account of its constitution. But
do see an advantage in having continuous super-
on over the work of the officials of the Board your-
?—Certainly.

1900. You also see a great deal of advantage in
ing the assistance of local men whose influence
be of great assistance as members of the Board?
ou are really coming at me in another way. I
e told you already that I am not in a position to
an opinion as to improvements in the personnel
he Congested Districts Board.

1901. I am talking of constitution again?—Now
are asking whether it would not be an improve-
t to add persons of a certain class to it. That is
alteration in the personnel of the Board, which I
not give you an opinion on. If you mean this,
there should be a representative of Kerry, for
nple, which has no representative at present, I
k that there ought to be. I think that there ought
e considerable representation of the congested dis-
s.

1902. It would not matter where the representa-
s come from at all; but I merely suggest this to
that there is an advantage in having con-
ous supervision over the work of the Board;
efore for that purpose you must have a paid offi-
or paid members. Then I suggest to you
should also have men like his lordship associated
a body of that kind, but who, necessarily, could
attend daily to the work that the Congested Dis-
s Board should discharge?—That is all on the
tion of the personnel. I am bound to say I have
y desire to assist the Commission, but no advice
I could give would be advice that I had con-
red, and I object to think on my legs.

1903. Sir Francis Mowatt.—You are here to
k on behalf of your own Department, and you
t desire to criticise the work of the other Depart-
its?—Yes. Nothing is further from my inten-

1904. Mr. Bryce.—There is a point that was left
rather unsatisfactory position. After the dis-
ion between you and Sir Antony about the com-
tive prices paid by the Estates Commissioners
the Congested Districts Board, although Sir
ny pointed out to you that the prices paid by
Congested Districts Board were lower on the
age of certain years than the prices paid by the
tes Commissioners, you still seem to have in your
d that the landlords would prefer to deal with
Congested Districts Board, on the indications of
an nature, as you say that the Congested Dis-
s Board give a better price. Have you really
case to allege which warrants you in drawing
conclusion?—In my answer to Mr. Sutherland
hat point I said, as far as I knew Irish land-
s, they would go to the Department which they
ght paid best. They are not fools nor philan-
pists.

1905. Sir Antony showed you as far as prices were
erned the Congested Districts Board did not pay
er prices. How else are you going to test it ex-
by price?—There are cases in which averages
e the matter. There are also cases in which
ages are most unfair. Now, one man might
a tremendous price for his land in a con-
d area. Another man might get a small price,
the average of those two would not give a correct
of what was given. I question the applicability
he doctrine of averages to this particular case.
ould not say that the doctrine of averages is
or fatal to my contention.

1906. Perhaps not, if you could get two cases of
sely similar estates in congested districts, pre-
y similar in conditions, where the price paid for
was a great deal higher than the prices paid for
ther, and there was no circumstance to account
the difference except the personnel of the two
s buying. In such a case I think you would be
fied, but otherwise I think not. We are very
ous to have your view on this point, because a
derable amount of discussion in the future will
nd upon it, and we are very anxious to know
grounds you have?—Perhaps the Commission
allow me to draw up a statement upon that point
forward it. I did not come here prepared with
ls of that kind, I may say frankly. I would
like to be allowed to read an extract from Mr. Finucane's evidence from your Third Report*:—"Most Rev. Dr. O'Donnell—Might one say that the poorer the class of people whose farms are made economic through the enlargement of holdings the bigger, as a rule, would be the loss on the process?—Certainly. (*Reading*)—In illustration of the difference between the prices estimated by the Congested Districts Board and the Estates Commissioners' prices I may quote the facts as to one estate, the W. R. Chichester Constable's estate, County Roscommon. This concrete case, which occurred in Roscommon, may be mentioned as illustrating the difference in the principles of estimating prices followed by the Congested Districts Board and the Estates Commissioners respectively. Major Chichester Constable offered his estate, comprising a small area of tenanted and a large area of untenanted land, to the Congested Districts Board for purchase in 1903. The Board's inspector estimated the price at £48,220, exclusive of bonus, which sum the Board offered to the vendor in September, 1903. The vendor refused this offer. The Board thereupon increased their offer in December, 1903, to £50,000, exclusive of the bonus, or £56,000, including the bonus. This offer was also refused. Subsequently, in November, 1904, the owner lodged a request for the purchase of the same estate to the Estates Commissioners, without mentioning the fact that he had already been negotiating for the sale of it to the Congested Districts Board. The Estates Commissioners had an inspection made by one of their most experienced inspectors, Mr. Lopdell, who estimated the price of the estate at £38,615."

51907. Sir Antony MacDonnell.—Was the area the same?—Why ask me the question? It arises on Mr. Finucane's evidence. Mr. Finucane said it. I was reading his evidence.

Mr. O'Kelly.—As a matter of fact it was the same.

51908. Sir Antony MacDonnell.—As a matter of fact it was not?—I am only reading Mr. Finucane's evidence. This is in answer to Mr. Bryce, who asked for a concrete case, and this has been put into my hands, and, until I see all the evidence, I must take it that it was the entire property. "The Estates Commissioners intimated to the owner the price which they were prepared to advance for this estate, £38,615, which was indignantly refused by the owner, who then informed the Estates Commissioners that he had already been offered £50,000 by the Congested Districts Board. The Estates Commissioners thereupon inquired from the Congested Districts Board whether it was true that they had offered £50,000 for this estate, and asked for a copy of their inspector's report on it, which was duly furnished. The Board intimated that their offer had been withdrawn, and that there was no objection on their part to an offer being made by the Estates Commissioners. On examination of the papers, it appeared that three separate valuations had been made of the untenanted land, viz., by Mr. Doran, and, second, by two of the Land Commission assistant commissioners for settlement of rents, Messrs. Gregory, Eyre, and Thompson, who were deputed at the request of the Board for the purpose; and, third, by the Estates Commissioners' inspector, Mr. Lopdell. The estimated annual valuation of lot 1 of untenanted land, comprising 835 acres poor law valuation, £839 10*s.*, made by all the inspectors, was in substantial agreement, being for this lot of untenanted land, first, by Mr. Doran, £700; second, by Messrs. Gregory, Eyre, and Thompson, £655, and third, by Mr. Lopdell, £680. But, while the Estates Commissioners' offer for this lot was only £16,392, exclusive of bonus, the Congested Districts Board offer was £21,000, or more than 25 per cent. over the Estates Commissioners' offer. The difference is explained thus—Mr. Doran's estimated price was calculated on thirty times the annual value without bonus, or 33·6 the annual value inclusive of bonus, while Mr. Lopdell's was based on twenty-four times the annual valuation exclusive of bonus, or twenty-seven times the annual valuation inclusive of bonus, this showing a difference of six and a half years' purchase of the annual. Mr. Doran's price, inclusive of bonus, invested at 3½ per cent., would yield an income of 117 per cent. on the annual value; Mr. Lopdell's would yield an income of 104½ per cent. on the annual value. Chairman.—The gross annual value?—Yes. Most Rev. Dr. O'Donnnll.—As regards that case, the Board were unanimously in favour of the purchase.

* See Appendix to the Third Report of the Commission [Cd. 3414, 1907] p. 143.

Sept. 3, 1907.

Mr. T. W. Russell.

We had to give that price if we were to get the land." I submit that I have answered Mr. Bryce's question.

51909. I submit you have not, if you just listen to me. Mr. Lopdell's offer was subject to the condition that the landlord was to purchase the house and demesne at a price named by Mr. Lopdell; so it was not the same estate. It was not the same area and was not the same value?—Are you speaking now of the estate? The annual value of lot 1 was proved to the Commission afterwards.

51910. This is the fact?—Here we have a responsible officer of the Estates Commissioners. I must put this strongly, because Sir Antony is not giving evidence—I am. Mr. Bryce asked me the question, if I could give one concrete case where the Estates Commissioners' offer had been lower than that of the Congested Districts Board. I submit on this evidence given by Mr. Commissioner Finucane, that the case has been made clearly and emphatically. That is what I object to this doctrine of averages for. This just shows the danger of taking averages.

51911. Most Rev. Dr. O'Donnell.—Are you aware that neither the Congested Districts Board nor the Estates Commissioners purchased the property?—I am aware of nothing save what Mr. Finucane says.

51912. Sir Antony MacDonnell.—You are not aware of the essential fact which explains the difference?—I point to what the Bishop says: "As regards that case the Board were unanimously in favour of the purchase. We had to give that price if we were to get the land."

51913. Most Rev. Dr. O'Donnell.—That price did not fetch the land?—There is a case at all events.

51914. Sir Antony MacDonnell.—How many years' purchase of the estate rental did the Board wish to give for this untenanted land?—I cannot answer that question.

Mr. Bryce.—30 years' purchase of the valuation, plus the bonus.

Sir Antony MacDonnell.—The valuation in Roscommon is 15 per cent. over the rental.

Mr. Doran.—This was not poor law valuation at all. It was the estimated agricultural value for a sitting tenant to pay, and, as a matter of fact, it worked out at only about 21 years' purchase of the rent which the landlords were receiving, and he refused the Board's offer even though it was so much higher.

Sir Antony MacDonnell.—Is not it a fact that the difference was due to the withdrawal of the house and demesne?

Mr. Doran.—The difference in the gross price is due to that, but that does not apply to lot 1. This case has been referred to so often that I would to ask to be allowed to make an explanation when Mr. Russell has finished, because I do not think that the facts have been clearly put before the public.

Sir Francis Mowatt.—Were the house and demesne part of the particular parts of the estate to which Mr. Russell has drawn our attention?

Mr. Doran.—Yes; in his first statement.

Sir Francis Mowatt.—Were the house and demesne in lot 1.

Mr. Doran.—Not in lot 1, but it was in the entire estate in which the large difference appears.

51915. Mr. Bryce.—That is one case which you have given of which there appears to be another explanation. The remarkable fact about it was that the transaction did not go through, and that therefore upon that particular case there can have been no general impression founded by landlords that they were likely to do better with the Congested Districts Board than with the Estates Commissioners. Now, assuming they have got that impression you have given a case which never went to actual practice at all, because no sale was effected, I would like to hear what other grounds you have for thinking that the landlords have reason to think they would do so much better with the Estates Commissioners than with the Congested Districts Board?—I said nothing about it until Mr. Sutherland put it to me, when I said that the landlords, like other people, if they went to the Congested Districts Board have a good reason for going.

51916. But there is an implication there?—But that is Mr. Sutherland's.

Mr. Sutherland.—The fact is not denied by any member of the Commission that there was this preference.

51917. Mr. Bryce.—But there is an implicat that the Congested Districts Board have not don well by the State and by the people in their purcha as the Estates Commissioners have done. That the position which I want you to justify?—I h the impression. I make no statement. If the C mission will permit me—I don't say they will or t they ought—I should be happy to put in a deta statement upon which that impression is founded.

51918. Most Rev. Dr. O'Donnell.—As a matter fact we have a return showing that the Estates C missioners, on the whole, have bought land cheap than the Congested Districts Board, but t Congested Districts Board always held this, that Board like the Congested Districts Board, to reli congestion must sometimes buy a property in a c tain place and must pay a little more for it tha they would elsewhere, and if the Estates Comm sioners were doing it they would have to do the sa thing?—I quite agree with that.

51919. Sir John Colomb.—Assuming that your i ference is right, and that the landlords prefer to de with the Congested Districts Board, is not it a suf cient inducement in favour of dealing with the Co gested Districts Board that in that case they g their money very soon and they know when they wi get it, while in the other case they will not get very soon, but will have to wait for years?—Are the quite sure they will get the money soon from th Congested Districts Board?

51920. If that is so?—It is an inducement.

51921. And a very great one for a man who ha charges on his estate?—Yes; for a man who ha charges.

51922. Mr. Bryce.—You say you want to have or authority for purchase and sale, and I think you ar quite right in that opinion?—Within the congeste area—yes.

51923. You said in the congested area, but if th Congested Districts Board was working, it could onl work inside the congested counties. But in order t relieve congestion land should be got outside the con gested counties. For instance, untenanted land migh have to be bought in Longford or Westmeath in orde to relieve Leitrim or Mayo. How would you get ov the difficulty there? Does not that seem to exclud according to your view, the Congested Districts Boar as being the operating authority?—Certainly. could not conceive the Congested Districts Boar working all over Ireland.

51924. Could you not conceive it would be necessar for the relief of congestion to buy lands in West meath?—Yes. That goes back to my old story. W have to co-operate with the Estates Commissioner for that purpose. Even if the Commission were t recommend and Parliament were to adopt the theor which, in my opinon, would be a sound theory tha the Congested Districts Board would have everythin to say to land and its improvement and developmen within these areas, if you come to set the Congeste Districts up as an authority outside these areas yo will have confusion worse confounded. You must, i you want land, in my judgment, co-operate with th authority set up by Parliament for the purpose o selling and buying land. You must have co-operatio with that authority for your work.

51925. I don't see any difficulty in the co-operatio myself?—Neither do I. It ought not to exist.

51926. You said it was improper to interfere wit the work of the county committees so far as they hav statutory powers in the congested districts?—Yes.

51927. Do you imply that it would be impossibl to alter that position?—No.

51928. Do I understand you to mean that if i could be altered you would like it to be altered t avoid overlapping?—What I say is this, these ar statutory local authorities. I think you will find a this time of day very considerable opposition fro these same authorities if you propose to take fro the powers which Parliament gave them and gra these powers to a nominated Board.

51929. Even if the Board was representative?—don't care what kind the Board is, you will not g these men to disestablish themselves. I don't sa that they are doing all that they ought to do, bu they are improving and improving very rapidly, an they are doing very excellent work in many parts o the country.

51930. As you think highly of their work you woul not desire to interfere with them?—I am not, at th

ne of day, going to strike down a local authority up by Parliament and set up a nominated au-ority in its place. Anyone else can do that if he es. I won't.

51931. Even if the administration is not all that it ght to be?—The administration may not be all that ought. They have not been accustomed to local ministration in the past, but I say on my know-lge and responsibility that these county committees over Ireland are improving remarkably in con-sted districts and elsewhere, and the work they are ing is, in its own way, most effective and beneficial rk, and I would be no party to ending it.

51932. Mr. O'Kelly.—Would not you suggest at is time of day that it is the nominated body which ould be disestablished?—I don't wish to destroy any dy, but if I were a private member of Parliament stead of an official I should resist with all my fluence and power the destruction of any local thority engaged in this work.

51933. There are only two bodies we have in our nds at this moment: the parish committees on the e hand, and the local county committees on the ner?—I am speaking only of the local county com-ttees. The parish committee is not a statutory dy at all.

51934. Don't you think if it came to dissolving a al committee that it is the parish committee should e way?—I am not for dissolving anyone.

51935. Has it ever been suggested that the ad-nistration of the parish committee is more efficient an the administration of the local committee?—I ve heard a great deal suggested, and I pulled up a unty committee the other day, but, on the whole, think they are working extremely well.

51936. Sir Antony MacDonnell.—Who has pro-sed their abolition?—Certainly I have not proposed but when the question is put to me I must answer

Practically I have dealt with the financial ar-ngements. We cannot go on with the money we ve, and we should require a great deal more money. don't know whether my third point is relevant or t. I wish to give it, not as Vice-President of the partment, but for what it is worth.

51937. Sir Francis Mowatt.—The Bishop has lled my attention to the suggestion that the fishery rk should be given to the Department as the fishery thority. I think that that goes with your general tement that there should be a single Department? Yes.

51938. Then, we need not trouble with that?—I n't know whether the third point is within your rms of reference. I wish to go into the question the acquisition of grass lands and the finance of e Land Act, and the difficulties that are in the y. You may take my opinion for what it is rth.

51939. Let us deal with the one. We have no doubt out the acquisition of grass lands?—The one hangs the other.

51940. You will, no doubt, have to refer to the iance of the Act in dealing with that?—What I nt to put before the Commission is the absolute cessity of acquiring the grass land, the difficulty of quiring it which is mainly, if not entirely, a ancial difficulty, and that lands me inevitably in e finance of the Land Act.

Sir Francis Mowatt.—No doubt we shall be able hear you, and if any question arises as to which feel ourselves excluded from hearing you I am sure u will bear with me if I tell you so.

51941. Sir John Colomb.—I presume in giving is evidence you are giving it as a member of rliament?—Certainly. I desire now, if you please hear me, to speak, as Sir Antony put it, as Mr. W. Russell.

51942. Sir Francis Mowatt.—Certainly, and if ything arises which we think we cannot go into u will bear with us if we tell you so?—As I stated the Bishop, in reply to one of his questions, I ve been thirty years examining this land question all parts of Ireland, with the best intentions, and have done what I could—it may be little or much—bring relief from the old state of affairs. Now, e pressing question that faces Parliament, and es it in the most awkward way, and which faces e Commission, is the acquisition of these grass lands. congestion is to be relieved it is quite clear that ese lands must be acquired. The question how they e to be had is one of extraordinary difficulty. When Parliament passed the Land Act of 1903 we were told by Mr. Wyndham—when I say "we" if you wish that defined I mean that the Land Conference was told, in the first place, and in the second place Parliament was told—that compulsion would not be necessary. At the Land Conference I and my colleagues—I mean my colleagues on the tenants' side of the question—set aside compulsion for the time being. We did not drop our opinions, or rather we did not drop our convictions, but assured that the landlords were willing to sell—when I say assured I use the word deliberately—provided they got an equivalent for their net income, and that compulsion would not be necessary, we set aside our ideas on the subject. We were not so sure of it as the representatives of the landlords were, and as Mr. Wyndham was, but in order to arrive at a settlement of this everlasting question we waived our views on compulsion and combined for a general settlement. The Commission knows what was the result. I think a very great result; and whoever has gone against the Land Conference I have never done it. I think we did magnificent work for the country. But now we are face to face with this position, that in the better parts of Ireland the Act of 1903 has worked extremely well bar the price for the present. I should be very sorry to speak for the future. But at all events the Act has operated in these districts, whereas the ameliorative portion of the Act, which, to our minds, was the most important part of it, has hardly worked at all.

51943. That was the very part that was required in the congested areas?—Yes, in the west. I don't say that it has not worked at all, but it has not worked as the other part has, and we have this extraordinary situation. We have Mr. Wyndham's promises, in Parliament and out of it. I heard his promises and therefore know what they were. No doubt no Department has to administer Mr. Wyndham's speeches; they have to administer an Act of Parliament. But we have this extraordinary state of affairs, that in the greater part of Ireland, north and south, and east, you have land rapidly passing from owner to occupier, and in the west, even apart altogether from the congested area, the Act is hampered and impeded, and is not worked in the same way at all. Why is it that the Act has not worked? I don't attach the importance to the money market at the present moment—the want of sufficient money to pay the landlords—that would regard it as an adequate explanation. That is very serious, but that is not the real reason why the Act has not worked here. The real question is these great grass lands cannot be had. There are some grass lands that can be bought at a reasonable price, but the great grass lands of the West cannot really be had at a price that will warrant the Commissioners in purchasing them and in re-selling them. That is the problem, a very grave problem for the Government of the country, because the people were promised these lands in Parliament by the mouthpiece of the Government. Nothing is clearer than that they were led to expect that these lands would be sold to them, and that the whole of this desperate state of affairs in the West would gradually be improved and bettered to a large extent. We have come to a dead stop. The first question that arises is how these lands are to be had. I am told that there is plenty of land to be had in the West of Ireland, though the Government did not seem to think so the other day when passing the Evicted Tenants' Bill. Certainly the terms upon which one branch of Parliament proposed to let them have it were very extraordinary terms. These terms amount to this. They were to get the full market value for the land; they were to get a bonus of 12 per cent.; they were to get the benefit of the Lands Clauses Act, which meant 10 per cent., and to get what arrears of rent the courts thought fit to grant. That put the settlement of the grass lands, the great work of your Commission as I take it to be, out of the question for all time. If that is to be anything like the way of settling it then the thing is at an end. I never laid down the proposition that compulsion would be necessary at the scale of prices there proposed, but I say that compulsion must be applied to acquire these lands at a price that will enable the Congested Districts Board or the Estates Commissioners, or whoever is transacting the business to re-sell these lands at a price that the tenants can pay. That is the first position I take up in regard to these grass lands. Now, the second position is even

Sept. 3, 1907.

Mr. T. W. Russell.

more difficult that the first. I admit compulsion to be difficult enough. I think it can be overcome, because, after all, the peace of Ireland counts for a good deal, and the people must have it. The second point is the real difficulty of land purchase at the present moment. I wish to make a suggestion on that point. There is no use passing an Act of Parliament ordering the lands to be sold and bought if you cannot get the money to pay for them. That is pretty much the position at the present moment. Is the present position to continue and can nothing be done to ease matters? There are two ways, in my opinion, of meeting the difficulty. I do not very much care which of them is adopted; but if the Commission recommend the acquisition of these grass lands the public and the Government will look for some guidance to the Commission. If the landlords are to be paid in cash, if they are to receive sovereigns for this land, and to be paid at the same rate of purchase as they have been paid, which has leaped up from 18 years' purchase to 25 years' purchase—that is an average of 18 years' purchase under the old Purchase Acts and 25 years' purchase under the present Act.

51944. Sir ANTONY MACDONNELL.—Was 18 years' purchase of grass land ever given?—I am falling back on the averages. That is the only thing I can do. The average price of land under the old Acts, for tenanted and untenanted land, was 18 years' purchase. They bought untenanted land even then.

51945. No doubt, but do you maintain that 18 years' purchase has ever been given for grass land; we are dealing now with untenanted lands in the County Roscommon?—We are dealing with a little more than that. The Congested Districts Board is dealing with all kinds of land, slums as well as grass land.

51946. I thought that you were limiting your remarks to grass land?—We are dealing with the whole question of land. When I said 18 years' purchase I was a little over it. The average of sales under the Land Act was 17·3 years. That is the figure in the returns. That has now gone up to 25 years' purchase.

51947. Are you dealing with grass lands alone?—I will take grass land alone. The argument is as good for grass land as for any other. The point I make is only this, that if these prices are to prevail, and if we are to pay for compulsion in addition, and if we are to pay a bonus in addition it is manifest that the thing cannot be done. Either the State must consent to lose on re-sale or the lands must remain as they are, or we must find some way out of the difficulty. My own opinion is that these prices cannot be paid.

51948. You take the price of land and the bonus, and also add on something for compulsion?—That is what the House of Lords put into the Bill the other day.

51949. But it has not put it into the Evicted Tenants Act?—No, but I think a great deal of their action in that was with a shrewd eye to the Act that would follow the proceedings of this Commission.

51950. Sir FRANCIS MOWATT.—I am exceedingly unwilling to interrupt for a moment. Mr. Russell, I am sure, will agree with me that it is exceedingly important to keep out what I may call any political atmosphere from our discussions. We shall listen, all of us, with great interest, to the course he will recommend, and to the facts which prompt that course, but I think it would be well if we confine ourselves as much as possible to these two. For instance, we may put aside, I suggest to you, any views you entertain on the House of Lords because they are not really operative. There is, no doubt, a difference of opinion. But let us consider what is the price which we think may possibly be granted, what course should be taken to ensure the sale of the lands, and how we shall deal with any resultant, if there is any resultant, loss to the State?—I quite appreciate the position. If they had not put in the fair market value of the land plus the bonus, plus 10 per cent. for complusion, plus a certain amount for arrears of rent, the House of Lords probably would have been better advised.

51951. We may put that out of court. Nobody would conceive that that can be done?—I am glad to hear that. I come to the question how the thing should be dealt with, in the present position of the money market, how the thing is to go on. I say compulsion, and compulsion must be paid for.

51952. Sir ANTONY MACDONNELL.—That is to say, we would have the three elements, the price, the bonus, and something for compulsion?—No. I have not said that at all. I would give the fair market value of the land and allow the bonus to stand for compulsion in each case. The first thing I have heard suggested—I don't say I approve of it; it is a way out of the difficulty—is that the landlord should be paid in stock. That is to meet the immediate difficulty. Of course that is open to clear disadvantages and clear objections. It is a proposal, and I don't think much of it. I don't think we can get back to that. I remember the time that they got the medium of payment changed from cash to stock in 1891. Then stock was at 110. The change was made by the Bill of 1891. I think they were paid under the Ashbourne Act in cash. I have a distinct recollection that when the Act was passed—I forget the exact year—but I remember very well we proposed to pay them in cash, and by a combination of the Irish Nationalist and the Irish landlords one fine Wednesday morning they put stock in instead of cash.

51953. Sir FRANCIS MOWATT.—So far as your opinion goes that is not a good plan?—I don't like to be unreasonable. I don't think it would be fair to say to a landlord: "We are buying £100 worth of land, and you will only get £82 for the piece of paper representing £100 which we give you."

51954. Then, that is not your recommendation?—No. This is a rather complicated business. Here is the position we are in. As the Estates Commissioners report, the tenants are buying on an average now of 25 years' purchase. The rate is somewhat higher in the north-eastern counties of Ulster, but we may take it at 25. Land stock is a little over 80. Now, it is obvious that in addition to the money raised and employed in actual purchase there is nearly one-fifth more to be added as loss on the stock. If you take 25 years' purchase by the tenant and one-fifth additional in the shape of loss, that makes 5 years' purchase additional to be paid by the taxpayer. This brings the price to 30 years' purchase. On the top of that you have the bonus. This being 12 per cent. the purchase money is heaviest when the price is highest, and on 25 years' purchase would amount in round figures to 3 years' additional bonus, making 33 years' purchase in all. And that does not include the whole of it, so far as the operation is concerned, because there is the upkeep of the Land Commission for all its multifarious works in addition to this enormous price for agricultural land. The various items of loss are proportionate to each other. The more exhorbitant the price that the tenant agrees to the worse is the security for the stock, and the loss upon the flotation and the higher is the bonus. It is all therefore, the unfortunate outcome of the basis of the Act of 1903, which deliberately set aside the old method of purchase by number of years' purchase of the land, and substituted for it a form of purchase by reduction. So long as the tenant secures his 20 per cent. reduction he has neither the capacity in many cases to inquire what his price is nor indeed is he concerned to inquire. Another difficulty at the present moment is the fact that while land stock is really not inferior in point of security to the consolidated funds, the financial houses have been able to make a dead set against it as bog stock. Chiefly from these facts the present actual situation is this, that in the Land Commission there is an immense amount of arrears in the form of agreements for sale for which there is no money available. The question is—are these sales that have been agreed on to go through, and is the money to be raised whatever the loss may be, and if that course is followed how will the country ultimately fare? This is relevant in this sense, that whatever you do you propose to add to this——

51955. Most Rev. Dr. O'DONNELL.—And if what you anticipate occurred congestion would not be relieved?—Yes. That would stop the whole work. I say that if it is allowed to go on it means financial ruin. If purchase is allowed to continue at a cost one way or another of 33 years' purchase of the rent for every acre of land sold nothing but financial ruin stares us in the face. I don't think that there is any perfect remedy, and all that a public man can do is to throw out any suggestion that occurs to him. To shut down the door on land purchase absolutely, that is, to suspend the operations of the Act, would undoubtedly be a very serious matter. It would raise a tremendous hurricane in Ireland. Landlords and tenants would both unite in attacking any Government that proposed to suspend or stop land purchase altogether. On the other hand, I do think

at if it were proposed only to alter the method of ıance only in so far as it was necessary to cut out e incidental loss, the attempt would be so obviously stifiable in the public interest that no outory could sustained against a well-considered effort directed erely to stop the leakage.

51956. Sir JOHN COLOMB.—I might ask you to de- ıe incidental loss?—Loss on flotation. Cut out this ss. There is one other fact to be noted, and it is is, that estates are now coming into the market ıich a year ago were not for sale. That is pecu- ırly so in the North of Ireland. There are several ses in my own knowledge in which the tenants ap- ied a year or more ago, and were told that the land- rd had no desire to sell. On these estates negotia- ons have now been opened from the landlord's side. ıe number of these instances suggests to me that the ndlords have present in their minds a suspicion that e finance of the Act of 1903 must inevitably in the ar future be revised, and any alteration in the ıance of the Act to stop the leakage that is inci- ntal must reduce the price if there are to be any les. This is one of the things that must be taken to account. But I venture to say that the moment announcement—and I think the Chief Secretary nt perilously near it the other day in his speech at istol—is made of a change in the finances of the d, unquestionably—I am speaking now of the North Ireland, of places that I know—there will be a sh of sellers, adding to the block already existing the Land Commission. The Commissioners will t take me as a financial expert, but I suggest that cut out the loss on flotation the stock ought to be ued at a rate of interest that will command some- ing like a par price. Two and three-quarter per nt. stock has failed to do that. If the stock were, wever, issued as Land Stock it is quite clear that en 3 per cent. would not go at par. Taking the pre- nt price of Consols bearing 2½ per cent., it is clear at the extra half per cent. on Consols would produce out par, so that to secure par price for a 3 per cent. ock it would be necessary to have the stock issued in ch a way as to make it impossible for financiers to upon it as bog stock. I don't know whether this is ssible or not—I mean to disguise the stock. Per- ps it is not.

51957. Sir ANTONY MACDONNELL.—Would it be ssible if it was floated as Consols?—Yes, but the rious objection occurs to my mind that the effect on Consols would be instantaneous.

51958. Sir FRANCIS MOWATT.—Whether you in- ease the rate of interest or make it identical th Consols?—Yes, but I am coming to that. is would involve a corresponding alteration in ction 45 and other sections of the Act. By that tion the purchasing tenant is charged for the use the money at cost price; the stock is raised at 2¾ r cent., and the tenant is charged 2¾ per cent., is 10s. per £100, for sinking fund, making a total 3¼ per cent. There would be no use in cutting t the loss of capital unless the rate charged to the ant were altered in the same proportion, as the s of capital is no worse than the corresponding loss interest. The rate of annuities, therefore, of the rchasing tenants would have to be made 3½ per nt. instead of 3¼. The effect of this, in the first stance, would be that the tenants having been ught under the Wyndham Act to buy by percentage uction——

51959. Sir ANTONY MACDONNELL.—Were not they ught it by the Land Conference?—Suppose I admit at it does not——

51960. You are responsible for it. You were a mber of the Land Conference?—The Land Con- ence report is not the law of the land—the Land nference report does not come before anybody for ad- ministration. We did a great deal at the Land Con- ence for peace and for a settlement.

51961. You did?—And we have been very badly t.

51962. But you cannot blame Mr. Wyndham for llowing your advice?—He did not take our advice everything.

51963. He took it on this point?—Of course, I n't object to your saying that.

51964. Most Rev. Dr. O'DONNELL.—You were sug- ting an improvement in the present system?— a. The effect of this, in the first instance, would that the tenants having been taught under the Wyndham Act to buy by percentage of reduction—I do not say by Mr. Wyndham—would stipulate as before for the 20 per cent. reduction, and would not think of the extended period of repayment. I speak for the part of the country I know best. That 20 per cent. is the difference between the amount of their annual instalment and their previous rent. Obviously with the increased rate of repayment annuity they could only secure the same reduction in their annuity as at present by purchasing at a lesser number of years' purchase. The effect of this, let me point out, is simply to get back to the old method of purchase. Whoever was responsible, I take my share of the responsibility of the Land Conference, and, as I said, we did do things that we were not certain about—in fact, that we were quite sure would result the other way. That was one of them. And let me say frankly for the tenants in the old days, and as one representing these people in a North of Ireland, I know more about these things than most people, that the universal method of buying land was by number of years' purchase, and not by reduction in annual payment.

51965. Sir ANTONY MACDONNELL.—Was years' purchase mentioned in any Act of Parliament?—That I do not say. I say—and the Bishop will confirm me when I say it—that in the old days, before the Act of 1903, the universal rule of purchase was by number of years' purchase.

51966. I ask you the question, was it ever mentioned in any Act of Parliament —No. I am not saying it was. That does not alter the fact that the custom of the country was to buy by number of years' purchase.

51967. Most Rev. Dr. O'DONNELL.—It was the custom?—In the event of an increase in the annuity to the tenant the tenant would take care that he gets the reduction that he is getting now, because the arrangement is an exceedingly clever arrangement. He gets the reduction, and goes on paying the instalment for seventy years, and posterity has to deal with it. It may be a very bad thing for posterity. My point is this. I don't think it is fair to say to the landlord that he is to take a bit of paper worth only £82 for every £100 of his purchase price; but this deadlock must be met in some way, and to meet it you must raise the annuity on the tenant. The tenant, when he finds himself face to face with that increase in his annuity, will go back to the old method of calculating by number of years' purchase, and he will take care that under the new system he is not paying more. He is paying now just as much in his instalment and more in his price. I reiterate my opinion that he is paying too much. That, it seems to me, would cure a difficulty. The scheme under Mr. Wyndham's Act, which reduced the element for sinking fund by a corresponding extension of the period during which the instalments were to be paid, was not of the slightest value to the tenants. The whole value of it was at once added on to the purchase money of the landlord. The tenant in 1885 got his 20 per cent. reduction under the Ashbourne Act, buying at 20 years' purchase. There was not so much bought in the North of Ireland. He is now under the Wyndham Act buying at 25 years' purchase, and getting no more than the same reduction, and paying for 70 years instead of for 49. The matter to me seems so imperative, the loss so enormous, and the probable result so disastrous that there could be no difficulty in defending a change, and a change that would cut out the loss to the taxpayer, and let the Act work freely.

51968. Sir ANTONY MACDONNELL.—Does not what you say come to this shortly. The tenant now pays 3¼ per cent. and gives 25 years' purchase, and if he has to pay 3½ per cent. he will give, say, 22½ years' purchase, and the loss will fall on the landlord; is not that the whole effect of what you say?—Of course, if you interrupt me in my statement I cannot go on.

51969. Most Rev. Dr. O'DONNELL.—You had practically concluded that part of it; if you would go on with the rest of it?—I don't know whether I ought or not. I am here to suggest to the Commission.

51970. Sir ANTONY MACDONNELL.—I must protest against this. I am a member of the Commission, and wish to bring the matter to a point, and clarify it in my mind. I make a remark with that view, and I offer no apology whatever for making it. I think it quite my duty to make it?—I am here as a witness. I am much obliged to the Commission for

Sept. 3, 1907.

Mr. T. W. Russell.

hearing me so attentively as they did. But I am giving evidence, and in process of so doing a member of the Commission interrupts me, and points to what the whole evidence means in a sentence.

51971. I ask the question whether this is not what you mean. In a few words I wish to express what the whole substance of your statement is?—Before you have heard it.

51972. Not at all?—If you think you have heard the whole why should I go on.

Sir ANTONY MACDONNELL.—But it was only up to that point?

51973. Sir FRANCIS MOWATT.—It is the usual conduct of a Commission when the argument necessarily extends over such a large surface as it does here that the members of the Commission should from time to time make sure that they are following the line of argument?—You will observe it is not put as a question to me: "Is this your meaning"? It was jumped.

51974. I am sure the Commission desire to get your evidence?—I have practically ended it.

51975. As far as I am concerned as Chairman, your statement has been so ably put before us that I shall take it as the opinion of Mr. Russell, and it is unnecessary for me to ask any question on the matter?—That is the second part of my statement.

51976. Sir JOHN COLOMB.—Am I right in interpreting your opinion as to the working of the Act that it has worked extremely well in non-congested areas, but that in congested areas it has not worked at all?—I say that, roughly speaking, over the West of Ireland the ameliorative portion of the Act has not worked as it was intended to work. In the other parts of the country with the ordinary farmers the Act has worked extremely well bar the price.

51977. You mean it has not worked as quickly?—Yes; not as quickly in the other parts.

51978. Do you admit that in the congested areas under the Act of 1903 and through the instrumentality of the Congested Districts Board very large areas have been bought?—No doubt.

51979. Is it not also the case that the Congested Districts Board cannot, or can only with difficulty, work any faster because it can only acquire the grass lands in the congested districts at a rate at which they can really turn them to account?—That is exactly my point, that the Act has been frustrated because they cannot purchase at the price.

51980. You admit that through the instrumentality of the Congested Districts Board, and under the provisions of the Act of 1903, very large tracts of untenanted land have been bought?—A certain amount of land.

51981. Do you think that the Congested Districts Board should really, to use an American expression, bite off more than they can chew?—They will have to bite off more than they have been doing if the work is to go on.

51982. But the work of re-settlement can go on no faster than the staff and money admit?—It is all a question of staff and money and the price.

51983. Without an increased staff and money do you think could the Congested Districts Board with advantage buy more land straight away?—I am speaking not alone of the congested area. I am speaking of the whole West of Ireland.

51984. I am speaking in reference to your statement. I understood you to say that within the congested districts the Act did not work well at all?—I did not state that. I said in the western area. No one would contend that in the province of Connaught the Act has worked to anything like the same proportion that it has done in Leinster or Ulster.

51985. Do you appreciate the point of view from which I am putting these questions to you is because this Commission is to inquire into the relief of congestion, and therefore naturally I wish to narrow the interpretation that I may put upon your answers so that they may be limited by the congested areas. Do you gather my position?—I say that the whole working of the Land Act in the western province has been hampered and has not proceeded at the same rate as the work in the better parts of the country where the farmers required it much less.

51986. On the question of the policy of the Act, it is the case that in the greater part of the country land is not transferred, as far as public departments are concerned, for the relief of congestion, but in the congested districts the whole question as regards this Commission and its inquiries is how far, under existing operations, the work of the actual relief of congestion has been hampered by the fact that the Congested Districts Board cannot buy land enough?—In my opinion this Commission never would have come into existence if the Act had worked in the western province as it has worked in the rest of the country.

51987. I am speaking of the Congested Districts Board having to deal with congestion in the West and carry on those operations under the Act of 1903, and I ask you again do you think the Congested Districts Board, in its work of acquiring, improving, and transferring estates, could work very much faster than they do now, even if they had the power to acquire more land?—I answer that by asking another question: are the Congested Districts Board themselves satisfied with the progress of the work?

51988. That is a question you suggest to the Commission to turn its attention to. You said that the alternatives were, under the present state of things, either that the State must give the fair market value of the land, plus an extra amount for compulsion, or, as I understood it, alter the whole system of repayment?—You use the words "market value." I don't think the words can be applied there. There is no market value. What I mean is that the landlord should be paid a fair price for the land, and he has got the bonus in addition.

51989. Do you consider that a fair price for the land is represented by the actual money which, if invested in a reasonable security, would leave the landlord where he had been?—Yes. I am entirely in favour of the proposition which the landlords accepted at the Land Conference, and which, in overwhelming numbers, they have not carried out: that they should get for their land sufficient to pay their net income. If this had been carried out by the landlords the Irish land question would be a long way on towards settlement.

51990. If an Act were passed that the State was ready to acquire land and to pay a price that would leave the landlords after obligatory deductions exactly where they were before, would you agree with that?—Yes; I agree to that principle, of course, but to hear landlords now you would imagine that they never made a bad debt in their lives. From what they say of their income it would appear to me that there had never been a bad debt incurred in Ireland. I am quite willing to stand by the Land Conference Terms that they should get their net income on second term rents or equivalents for it, but you have then to discover, and there will have to be some steps taken to discover, what that income is. No landlord now ever allows that he did not get his rent.

51991. I am dealing with the principle and not with details. Am I correct in gathering that in your opinion the principle on which land should be purchased out is that they should receive such an amount as would give landlords their net income?—Invested in a reasonable security.

51992. Sir ANTONY MACDONNELL.—What was the rate of investment at the Land Conference?—3¼ per cent., I think.

51993. That is 25 years' purchase?—Yes, but since the Land Conference sat you will please bear in mind that Parliament has added to the securities in which the money could be invested a very large number of trustee securities, some of them bearing 4 per cent.

51994. I suggest to you that the Land Conference provisions were far too high?—I said a great deal for peace then that I would not say now. You may take me as adhering to that. I have no desire to get away from it.

51995. You will be glad to see that established as a principle of law that every landlord should know that the State is ready to purchase his property on the basis of the Land Conference proposals?—I have no objection, but we must know what the net income is. It is not correct to take the rental.

51996. Sir FRANCIS MOWATT.—His absolutely net receipts for ten years?—Yes.

51997. Sir JOHN COLOMB.—Invested at 3¼ per cent.?—Plus what Parliament decided. Parliament added securities after the Land Conference which were not valid before, and these securities bear a higher rate of interest than 3¼ per cent.; we must take that into account.

51998. Most Rev. Dr. O'DONNELL.—What would be the equivalent now after the sanction of these investments?—Nobody has a right to ask that the bogs of Connaught should be placed on a level with gilt-edged securities in England. You must get at the facts.

1999. Sir JOHN COLOMB.—I don't want to go into ...e things. I merely wish to narrow down the ...stion to the point that appears to me?—You may ... it from me that in all transactions in Ireland ...ar as I am concerned as member of Parliament—...m not speaking as a member of the Government, ...ainly not as Vice-President of the Department of ...iculture—I should be willing that the Irish land-...ls' net income shall be found out over an average ...en years, and that they shall get an equivalent ... that second term income wherever the land is, and ...t the investments of the money to produce the ...ivalent shall depend upon the Act of Parliament ...ch supersedes the recommendations of the Land ...ference, because they give the landlords a much ...her rate of interest. I know one landlord, for ...mple, who has taken advantage of that, and whose ...me has been added to by £9,000 a year.

2000. Sir FRANCIS MOWATT.—I understand you ...n such a rate of interest as is possible by invest-...t in the stocks which Parliament made eligible ... investments?—Precisely.

2001. Sir JOHN COLOMB.—You have referred to the ...ment of landlords in stock?—Yes. That was a ...gestion of others.

2002. Where you contemplate payment in stock in-...d of in cash to a landlord I want to know would ... also contemplate paying charges such as mort-...es in stock?—I said I believed that that would be ...easonable and unfair. I merely mentioned it as ...uggestion that was made.

2003. You dwelt very much on the fact that pre-...us to the Wyndham Act the question between land-...ls and tenants was simply a question of number ...years' purchase?—That was the basis on which all ...gains were arranged.

2004. Then you said that under the Wyndham Act ...t system was changed and the question was one ...ply of reduction?—The result of the Wyndham ... was to change it. It was not statutory.

2005. As a matter of fact, is it not the case that in ... differences that have arisen between landlords ... tenants in reference to sales under the Wyndham ... the whole thing resolved itself, not into a question ...reduction, but a question of the number of years' ...rchase?—All I can say about that is that the ...stion of purchase by reduction never was heard of ...re the Wyndham Act came into operation. The ...ants had come to a sort of set form of giving so ...ny years' purchase. I don't know whether they ... it in their heads always what the thing would produce, but the whole thing has been changed since the Wyndham Act. The question now is, not what number of years' purchase is to be paid, but what reductions they will get.

52006. You say you have been struck with the sudden readiness of landlords in certain parts of Ireland to sell?—Yes.

52007. Was I right in attributing to you the opinion that the cause of that was the fear of more unfavourable financial arrangement affecting landlords in future legislation?—My belief is much what you say. Of course the position of the finance of the Land Act is pretty well known. There is almost certain to be some change. The position now is so favourable to landlords that even men who refused to sell before are now willing. I can attribute it to nothing else than the fear of these changed conditions.

52008. But the adoption of the principles of the Land Conference would terminate these apprehensions. Do you think would it lead to a general settlement of the land question?—I am far from saying that.

52009. Mr. BRYCE.—You said that the land in Connaught and in the West, generally, was a very different kind of security from land in the East?—Very.

52010. We will all agree to that. Do you think that that consideration would be at all mitigated by the fact that in calculating the landlord's net income for purchase you would take into account the arrears in past times?—No. I would not enter into anything like that. I consider there are thousands of holdings in Connaught upon which a fair rent should never have been fixed, and out of which no economic rent is payable.

52011. Sir ANTONY MACDONNELL.—Or any rent?—And if the Land Commissioners, after the Act of 1881, had done what they should have done they would have returned those lands as paying no rent whatever. I have seen hundreds of holdings in the West of Ireland, and the idea of filling up a Land Commission pink schedule in connection with them is ridiculous. The thing is impossible unless it is done by rule of thumb. Rent should never have been fixed on them at all. They should have been treated as allotments.

52012. Mr. BRYCE.—We have had evidence of the Estates Commissioners with regard to that point and pointing out that it is really owing to the fact that at the initiation of the Land Acts there was no proper principles for fixing rents in operation at all?—Of course that is not for me.

The Commission adjourned.

B.—SALES OF SMALL HOLDINGS *in Ballina District during* 1906-7, *commencing 1st January,* 1906.

No. 1.

Landlord, JOHN M. COYNE, Esq.

Holding at Lahardane sold 12th January, 1906, for Mr. John M'Hale. Rent, £3 12*s.* (judicial); sold to Mr. Barrett for £50 and fees, 5 per cent.

No. 2.

Landlord Trustees of Mrs. LEWIS.

Holding at Killanley, Ballina, sold 1st March, for Robert Warren, Esq. Judicial rent, £20; sold to Mr. Jas. M'Hale for £301 and fees, 5 per cent.

No. 3.

Landlord, JOHN L. BRINKLEY, Esq.

Holding of land at Dromore West sold on 13th March, 1906, for Mr. Munnelly. Rent, £3 15*s.*; sold to Ellen M'Kenzie for £121 and fees, 5 per cent.

No. 4.

Landlord, Mrs. CUFFE.

Holding at Curracur, Dromore West, sold for Mr. P. M'Donagh on 12th April, 1907. Rent, £4 10*s.*; sold to John M'Gowan for £145 and fees, 5 per cent.

No. 5.

Landlord, Trustees of Mrs. LEWIS.

Holding at Ballymohenry sold on 26th April, 1906, for Mr. Owen Ruane. Rent, £30 6*s.*; sold to John Cavanagh for £600 and fees, 5 per cent.

No. 6.

Landlord, U. A. KNOX, Esq.

Holding of land at Gortnadreha, Knockmore, for Mr. T. Gaughan, sold on 17th July, 1906, for £100 and fees, 5 per cent. Rent, £4 13*s.* 6*d.*

No. 7.

Landlord, Mrs PERY KNOX-GORE.

Holding of land at Breaffy, Ballina, for Thos. Naughton. Rent, £4 13*s.* 6*d.*; sold on 10th August, 1906, to Mr. Thos. Neary for £126 and fees, 5 per cent.

No. 8.

Landlord, Capt. A. A. KNOX.

Holding at Cloonkee, the property of Miss Mary O'Hara, sold on 2nd November, 1906, to Mr. P. M'Andrew. Rent, £2 17*s.*; sold at £83 and fees. 5 per cent.

No. 9.

Landlord, Mrs. SAUNDERS KNOX-GORE.

Holding of land at Ardoughan, sold on 11th December, 1906, for Mr. P. Quinn. Rent, £6 2*s.* 6*d.*; sold to Mr. Hunter for £150 and fees, 5 per cent.

No. 10.

Landlord, IRISH LAND COMMISSION.

Holding of land at Rathmacostello, Crossmolina. Rent, £4 5*s.*; sold to Mr. Thomas Garrett for £63 and fees, 5 per cent.

Government Valuation,	6	0	0
Rent,	5	12	0

Purchase Money = £182 10*s.* 0*d.*

APPENDIX II.

DOCUMENTS put in by Mr. THOMAS F. RUTLEDGE, in connection with the Evidence given by him before the Commission.

A.—NOTES OF EVIDENCE.

In order to meet the suggestion that Mayo estates are not a security of high class or not as sound a security as estates in other counties, I desire, firstly, to call attention to Tables 69 and 71, pages 72 and 74 in the Report of the Irish Land Commission for the period ended 31st March, 1906, dealing with judicial rents which have been fixed by all methods provided by the Land Law Acts for first and second statutory term, from 1st August, 1881, to 31st March, 1906, and from the commencement of the second statutory term to same date. They indicate that properties in this county must have been let to tenants upon more reasonable terms than in other counties in Ireland, as an examination of the tables will show that the average reduction given for all Ireland in respect of first term rents amounts to 20·7, whereas in the County Mayo the average reduction only amounts to 19·1. This shows that Mayo properties have been let 1·6 per cent. cheaper than the rest of Ireland, and a comparison of this reduction with other counties works out more favourably. For instance, in the Province of Munster, average reduction, 22·1, the County Mayo reduction of 19·1 is less than in any other county in that Province, and in the Province of Leinster, average reduction, 20·1, it is less than any, except in the Counties Kildare, 17·5, King's, 18·4, Westmeath, 17·8, and Meath, 18·9. In the Province of Ulster, average reduction, 19·7, it is less than any counties, except Antrim, 18·7, Down, 19, Fermanagh, 18·4, and Londonderry, 18·6. In the Province of Connaught, average reduction, 21, it is less than any other county, Galway being 22, and Leitrim being 22·3. Therefore, it is as much as 2·9 less than the former and 3·1 less than the latter.

The average reduction for second term rents fixed by all the methods provided by the Land Law Acts from the commencement of the proceedings to the 31st March, 1906, for all Ireland is 19·7, whereas the reduction given in Mayo is only 15·5, no less than 4·2 under the average for all Ireland, which is a less reduction than in any county in the Province of Munster, average reduction 18·1, the nearest being Tipperary, 16·6. A less reduction than in any county in the Province of Connaught, average reduction, 17·5, and less than in any county in the Province of Leinster, average reduction, 16·8, except Kildare, 14·1, King's, 14·7, and Meath, 13·9. A less reduction than in any county in the Province of Ulster, average reduction, 22·7, the nearest being Tyrone, 19·1. Therefore, as regards second term rents, it is clearly shown by the return of the result of the proceedings to fix rents that Mayo properties rank fourth in all Ireland, a less reduction in respect of these rents having only been given in the Counties Kildare, 14·1, King's, 14·7, and Meath, 13·9.

Dealing with the same point as to security, secondly, I hand in a return* dealing with sales of tenancies in the county, which will show the extraordinary high prices given by purchasers. From this I draw the reasonable inference, that the landlord's rent is as secure as anything can well be. If his tenant pays him £5 a year and the tenant's interest is worth from £100 to £120, is not the security behind the rent almost gilt-edged? The tenant is not likely to forfeit an interest so valuable by declining or neglecting to pay such a small outgoing as the annual rent.

Lastly, on the question of present security, I also submit a return† in connection with some estates over which I act as agent, which are entirely situated in the most congested part of this county, showing the annual rent accrued, number of tenants, and amount of rent discharged for the past ten years, and as the return will show, the punctual payment of rent on these estates speaks volumes for the integrity of the tenants and the excellence of the security.

I also hand in a return,‡ taken from the Blue Book, according to the various rural districts in the county, dealing with untenanted lands upon estates over which I act as agent, and the owners of these lands are perfectly satisfied to dispose of these, together with the tenanted lands which they own, provided they are given a price which will produce a capital sum (plus expenses of sale, 5 per cent. on the gross purchase money) which, when invested at 3½ per cent. interest, would produce their present net income. By net income I mean the profits of the lands to the owners in ordinary cases, after allowing for purely estate outgoings, namely, poor rate, head rent, tithe rent charge, and other Government charges, together with expenses of management, and this considering that in selling their untenanted lands they are disposing not alone of their present net income out of such lands, but are also parting with their occupation interest, which, although of immense value, they are getting nothing for. For instance, they might have sold their occupation interest in these lands creating tenancies since the passing of the Land Act, 1881, and accepting large sums of money as fines for the creation of such tenancies and still retaining their present net income. Therefore in being willing to sell on the terms mentioned they cannot be considered unreasonable. Nor have I referred to the loss of proprietorial rights or sentimental loss of prestige.

If the Department decide to let grass lands acquired by them to tenants at a lesser figure than will recoup the expenditure in acquiring such lands I have no objection, but the State in doing this beneficial work must bridge over the difference. See Mr. Stuart's evidence, questions 17630 and 17729,§ as to letting parcels of land 15 per cent. under a fair rent and that he considers them good bargains. The position may be thus stated. A landlord receives £100 a year for a grass farm, net, after meeting all estate outgoings. The State acquires it, and in order to carry out a policy of amelioration for the benefit of the poorer classes lets it in parcels to occupiers, who pay £80 a year. Is the landlord, who acquiesces in the policy in so far as he voluntarily surrenders his grass land, to bear the deficit? Is he to be compensated on the basis of an income of £80 a year only? I submit no argument based on equitable principles can be adduced in favour of such a suggestion.

Ireland already contributes much more than her share of taxation for Imperial purposes, as found by a Royal Commission, and I am of opinion and with great confidence suggest that the Imperial Exchequer should fill the gap in every case where the lands are not relet at a figure sufficient to recoup the Departments.

I concur in the view expressed by Colonel Saunders Knox-Gore in his evidence before the Commission at Crossmolina, that the constitution of the Congested Districts Board should be altered by vesting in the Board power to act from day to day without having to resort to the trouble and delay of convening meetings, and I approve of the Board and think they should be maintained as an independent body and that far more money should be placed at their disposal to enable them to continue the admirable work they have done and are at present doing, and I would also suggest that the Government should undertake a large scheme of arterial drainage in the county, which would be of immense importance, and also that the sea fisheries on the coast should be further assisted by an extension of the existing railway system and the building of other piers for the protection of the fishing boats.

* See p. 194. ‡ See p. 195.
† See p. 194. § See Appendix to the Third Report of the Commission [Cd. 3414, 1907], p. 225. *et seq.*

APPENDIX III.

APPENDIX III.

DOCUMENT put in by Mr. A. C. LARMINIE in connection with the evidence given by him before the Commission.

NOTES ON CONGESTION IN IRELAND.

In dealing with the important and complex problem of "Congestion" in Connaught, I base my statements on personal knowledge of facts as existing, chiefly on the estate of the Earl of Lucan in Mayo, with which I have been connected for over forty years, and which may be considered as an eminently typical example of the entire subject, embracing as it does congested and non-congested areas, "untenanted land," land running by the sea, with a few islands in Clew Bay.

Within the last eight years the Congested Districts Board has purchased, and to some extent dealt with, a large portion of the Lucan Estate, which may therefore be considered a more or less complete "object lesson" for the consideration of the Commission appointed to enquire into and report upon the subject.

A "CONGESTED DISTRICT"—WHAT IS IT?

It is almost beyond the "wit of man" to give a clear definition of this much-debated term; but, for my purpose, I shall take it as a district unable, one year with another, to maintain its population in a fair condition, under a moderate, or even low, standard of comfort, without assistance from external sources.

A glance at the Ordnance Maps issued about the year 1840 will show that even then the greater part of Mayo was in a highly congested state, an evil which became more accentuated during the following years, until the crash came, when, as in a moment, the staple food of the peasantry was swept away, famine, with all its attendant horrors, descended upon the land, and as each succeeding year brought a return of the dreaded blight, the situation became more and more hopeless, so that, having no reserves to fall back upon when the earth "ceased to yield its increase," the peasant farmers had to go.

It were idle now to debate the question whether the Government or the landlords, or both combined, might not have retained a larger number of these peasant farmers in the hope of better times. It must be borne in mind, however, that the landlords were, comparatively, in as bad a plight as the tenants, with ruin staring them in the face. Numbers of them were wiped out; and a still greater number were reduced to the greatest straits. Under the maleficent working of the Incumbered Estates Court, estates that, with care and patience, would have proved perfectly solvent, were thrown on the market, generally in sections, and were purchased as a speculation by parties in no way connected with land, entirely ignorant of agriculture, and without any sympathy for the struggling farmer. Those landlords who were able to save their estates had to sacrifice enormous sums; and it is more than could be expected of human nature that they should not adopt means, even if harsh, to prevent a recurrence of a similar disaster.

The outcome of all was that thousands left or were removed from their miserable holdings, which, chiefly by the outlay of money borrowed by the landlords under various Land Improvement and Drainage Acts, were improved, drained, fenced, and gradually turned into grazing farms. These became increasingly valuable owing to the enhanced prices for meat, wool, and kindred articles, the result, to a great extent, of the Crimean War and the subsequent Civil War in America, combined with the impetus given to commerce in general by the beneficial operation of "Free Trade."

To return to congestion, in the latter end of the eighteenth century and in the opening years of the nineteenth, it was customary for landlords to let large parcels of land to several tenants who held in common and divided the tillage land as best suited their wants for the time being. The tenancy was usually a lease for three lives, without, unfortunately, any clause restricting sub-division. As sons grew up and married they were given portions of the holding, getting a bit of the good and a bit of the bad, with the result that in a very few years the land became an agricultural patchwork, which, under a very primitive method of farming, year by year proved less productive; while the number of families to be supported was doubled, trebled, or quadrupled, as the case might be. In these circumstances it is evident that when the potato failed all were involved in a common irretrievable ruin.

It may be of interest at this point to note that the tenants who suffered least and came best out of the struggle were those living in wild and mountain districts; while holding under the same conditions of tenure, they were not so entirely dependent on tillage, having considerable numbers of sheep, cattle, and goats, which enabled them to hold on till the worst was over. They, too, held their land in common, or "rundale," and, forgetting, or not taking warning from the past, have continued, perhaps to a lesser extent, to portion their sons and daughters out of an originally limited holding; so that, to all intents and purposes, they have ceased to be farmers, and now depend largely on migratory labour to enable them to pay their rents and live in any approach to comfort.

On this point I entirely fail to see the hardship said to be involved in the necessity of young men going to England or Scotland to work in the harvest fields or in other ways to supplement the income derived from the home earnings. My chief regret is that, on their return to Ireland each autumn, they appear to have left behind their habits of steady industry while failing entirely to profit by the opportunities they have had of seeing the result of the most profitable systems of farming in all its branches.

For some time after the passing of the Land Act of 1870—which, in addition to penalising capricious eviction, secured the tenant in the value of his improvements—there was in some districts marked advance in the methods employed in the cultivation of small farms: the land was better tilled and cropped, to some extent, on a system of rotation; the cottages were kept cleaner; and altogether there was a greater air of comfort, if not prosperity, than had previously existed. This progress continued during the succeeding years, until the failure of the potato once more proved fatal to the hopes of small farmers, coincident as it was with the rapid decline in the value both of agricultural produce and all classes of live stock, more especially pigs. A violent agrarian agitation, coupled with the more or less demoralising effects of the institution of relief works on an extensive scale tended to divert the minds of the farmers from that constant attention to their holdings so necessary for success. The Land Act of 1881, while it completely revolutionised the relations between landlord and tenant, has not proved the incentive to progress that one would have hoped from so far-reaching a measure. The entire country became a sea of litigation; and during the period, sometimes running into years, that elapsed between the service of an originating notice and the final fixing of the judicial rent, the tenant did not consider it to his interest to improve, or, indeed, to maintain the condition of his holding.

Still, there has been a steady, if slow, upward ovement in the status of the small farmer; he and s family are better, at least more expensively fed d clothed; his cottage and surroundings are im-oved, and show a greater regard for sanitary nsiderations. There is frequently a flower patch front, or a few window boxes supply a touch of our. This may be considered the result of minine influence. Unfortunately, the management the farm has not similarly progressed. Practi-lly nothing is done during winter; stubbles are ver turned up till spring; drains are not opened; eds and rubbish are not cleared off or destroyed; that each year the land is called on to support two ops, ONE of which, at any rate, reaches maturity. is to be hoped that a new era is about to open up, d that practical education, in the widest sense of e term, will place the tiller of the soil in a position cope with the many difficulties incident to his sition, and to make the most of his holding, be it rge or small.

It must, however, be borne in mind that tillage ne cannot support an average family; it must be pplemented by either live stock or external em-oyment. The "gintleman that pays the rint" ars nearly as important a part in the domestic nomy as he did half a century ago, and has, after temporary set-back, proved the sole successful op-nent to the demon of free importation.

The small farmer has been fortunate in suffering mparatively little from the great fall in the price live stock during the last quarter of a century; ile the improvement in the quality of both his ttle and sheep has more than made up for the re-ction in value. The source of income most affected the sale of oats, the price of which has dropped arly 50 per cent.; it is only where used as food, ther by the family or the live stock, that it at all ys the grower. To sum up as to the present posi-n of the small farmer, I believe it is infinitely tter than at any time prior to 1870. Rents have en reduced from thirty to forty per cent.; large ntributions towards local taxation are paid out of perial funds; there are absolutely fixity of tenure d right of free sale; while the introduction of eaying has placed within the reach of every tiller the soil at a trifling cost the means of almost cer-n immunity from the attacks of the "blight," hich has so often proved fatal to the only crop that ply repays the cost and labour of cultivation—any rate, in this county and under existing condi-ns.

To go back to the "bad times," as I have stated, rge areas were turned into grazing farms, but only degrees, as, for a considerable period, agriculture s largely carried on by landlords and residential rmers, who, even after paying liberally for anagement, had still a good margin of profit. As ne went on, the price for corn fell; while cost of oduction increased; so that every year saw land ing out of cultivation and grazing pure and simple came the staple industry of the country For ne twenty years all went well; and fortunes, even, re realised from very small beginnings. Then the rn came; and of recent years it has been a struggle do much more than make ends meet.

Verily the "grazier" has fallen upon evil days, d from being a "power in the land," there is ne now "so poor as to do him reverence." Press d platform unite in denouncing him as the almost human foe to Irish progress; he is held up to blic scorn and opprobrium; he and his family are be as "pariahs" amongst their fellows; in a rd, his life is to be made a burden to him.

Now, what is the average grazier? He is a man the "people," mixing with them, dealing with em, attending their places of worship, his children ng to the same school as theirs, a man hitherto ked up to as an authority to be run to in any uble or difficulty connected with farm or stock—a ritable "friend in need." He cultivates as much d as he requires and can afford to pay high wages ; and makes as much hay, very often when the sun es NOT shine, as he can find labourers to save. If has raised himself to a position of comfort, or en affluence, it has been by the possession of the alities necessary for success in any walk of life. hard workers he is the hardest. Early and late, mmer and winter, in fair weather or foul, he ows no rest, and is, withal, a cheery, hearty Irish-man, equally ready to "face his enemy or back his friend." Is he to be "wiped out"? and on what terms? Are "compulsory powers" to be granted to the Congested Districts Board or any other body to deal with the question?

"Compulsion" is an ugly word where applied to the ordinary affairs of life, and to have any semblance of equity should be applied all round.

It is often said that land is taken compulsorily for railways or other public works. True; but how trifling is the injury done to any individual! and how amply are they compensated! If anything like similar terms are offered to graziers, there should not be much difficulty in dealing with them.

With the general objects and desires of the Congested Districts Board I am in entire sympathy; and I may claim that the Earl of Lucan has acted as a pioneer to the Board in Mayo and on very similar lines. In 1889 and the few following years, under his lordship's instructions, I divided up large areas into about one hundred and forty portions, forming either farms of about fifteen acres with mountain grazing, or additions to small holdings adjoining. I also broke up the "Co." holdings, of which a great portion of the estate consisted, making each occupier a separate tenant.

From a landlord's or agent's point of view, the result of this latter step was not satisfactory Not only was the clerical work much increased, but the collection of rents, strange as it may appear, became much more troublesome and difficult, necessitating more frequent recourse to legal proceedings, which, while usually successful, did not tend to improve relations between the parties. The rents on the holdings carved out of "untenanted land" have been fairly well paid; but, as with the general body of tenants, the old desire to be "clear in the office" has ceased to have a leading position in the programme for the year. This is not surprising; but with the decay of "ancient traditions" it is to me a matter for regret that those who held these traditions—viz., the "old people"—have ceased to retain the supreme position in the household, whose policy is now in a great measure governed by the younger members. As yet I have not observed any beneficial effects following the change.

Up to recent years, on the death of the "head of the house," his widow, by an "unwritten law," took his position, was looked up to and obeyed in everything connected with the house and farm management, even exercising the right of arranging marriage settlements and deciding on the "portions" to be given to daughters or younger sons. Now it is frequently the custom for the eldest son, when he marries, to get the holding forthwith into his own hands, he undertaking to support his parents during their lives in a manner suitable to their position. This very often creates friction, and, should the bride not pull well with her mother-in-law, the powers of the law have to be invoked to keep the peace, or the old people have to proceed by civil action to enforce the performance of the contract.

This social revolution is entirely the outcome of education other than scholastic; but this is a point which I do not care to elaborate; nor is it strictly relevant to the main purpose of this pamphlet—to place before its readers a plain statement of facts bearing on the present condition of rural life in the West of Ireland, free from bias or any desire to convey erroneous or prejudiced impressions.

Of the work of the Congested Districts Board I can speak in terms of unqualified approval. Given the solving of a problem the growth of generations, the Board has set about it in a thoroughly practical, business-like manner. It is true that in one of its early Reports a rather petulant demand was made for practically unlimited funds and "compulsory powers." The Government of the day, failing to accede to this modest request, the Board has worked on what I consider the best possible lines for the accomplishment of the task set before it. Every transaction has been carried out in a most satisfactory manner, with due regard to the rights and claims of all parties and in the teeth of much irresponsible and ungrateful opposition. I believe that now the efforts of the Board are appreciated at their true value by all whose opinion is worth having, and have met with a very large measure of success. It is not necessary for me to enter into details as to the work already accomplished, as these are published from

APPENDIX III.

time to time, and must be familiar to those interested in the prosperity of the rural population in Connaught.

The Board has been much facilitated in its operations, and has been able to carry out many beneficial changes that no landlord could attempt by the prevailing idea that it had the Government at its back; for, although Pat is ever "agin the Government," he has a wholesome respect for the "powers that be" in ordinary affairs of life.

Rumour has it—and apparently on good grounds—that the Board will be amalgamated with or absorbed in the Estates Commissioners. Why? I am quite unable to supply an answer to the question. If, however, a reduction in the number of Departments is considered politic, the work of the Congested Districts Board should be carried on as a separate branch, with a special Director. He should not be far to seek.

What the outcome of the labours of the C.D.B., as it is familiarly called, and other Government agencies may be, it is indeed impossible to forecast. An agrarian revolution is being carried out with a vast expenditure of public funds, and no doubt wisely and beneficially, so far as the improvement and enlargement of holdings in concerned. It is to be hoped that, with the example set and the increased facilities for agricultural and technical education, a great advance will be made in the material prosperity of a considerable section of the rural population.

I am not, however, convinced that this movement will pass a certain stage, as I am quite satisfied that as a means of increasing the absolute wealth of the country agricultural pursuits in Ireland can have but little effect. Free Trade has not only settled that question, but has also rendered the establishment of great industries that would give employment to the surplus population absolutely impossible.

I cannot believe that emigration to any appreciable extent will be stopped; and I am candid enough to say that it would not be desirable that it should. One shudders to think what the condition of Ireland would be if the millions who have left her shores had remained in their wretched homes without any hope of being ever able to do more than drag out a miserable existence under conditions calculated to destroy all self-respect or desire to take an active part in the progress of the world. Love of country, one of the most noble attributes of man, must not be allowed to degenerate into a listless content with one's surroundings. Young Irishmen and women have too many active agencies working amongst them, too many voices calling them to come and share the prosperity to be had in foreign lands as a result of labour to admit of their resting satisfied at home without any tangible prospect of bettering their condition. Education, too, must always promote a desire for change; talent will seek for an outlet; and where the home market does not offer sufficient reward, who has a right to shout, "Stay at home!"? Irishmen the world over have left the impress of ability on their surroundings; have acted no ignoble part in the world's history; while even the descendants of those whom adverse circumstances compelled to be unwilling emigrants form a potent force in the destinies of the great Republic of the West.

Who having the true interests of the Irish at heart would wish it otherwise? I dare not!

STATISTICAL ABSTRACT—CO. MAYO.

A.—PREFATORY NOTE.

Special statistics relating to County Mayo have been prepared for the Commission by the Commissioner of luation (see pp. 207–10), the Registrar-General (see pp. 212–27), and the Department of Agriculture and chnical Instruction (see pp. 228–35), and certain returns have been furnished at the request of the Commission the Local Government Board, the Department of Agriculture and Technical Instruction and the Congested stricts Board. Other information about County Mayo is available in different publications, *e.g.*, the Census turns, the Annual Agricultural Statistics, the Annual Reports of the Irish Land Commission, the Estates mmissioners, the Congested Districts Board, &c.

All this statistical information has been brought together in the following pages, added to, and collated; d explanatory notes have been added where required (*e.g.*, pp. 207, 211, 243, 257 and 268) with a view of ming a compact Statistical Abstract of the chief points of interest in County Mayo which may prove of istance to the Commissioners during their sittings in County Mayo, and subsequently be helpful to ders of the evidence.

WALTER CALLAN,
Secretary.

13*th August*, 1907.

B.—GENERAL STATISTICAL INFORMATION, TAKEN FROM THE CENSUS REPORT, 1901, COUNTY MAYO BOOK (pp. vii., viii.).

The (Administrative) County of Mayo covers an area of 1,380,390 statute acres, or 6·6 per cent. of the total a of the country.

The number of persons in the County of Mayo according to the Census was—in 1881, 244,343; in 1891, 3,698; and according to the recent Census, 199,166 (97,564 Males and 101,602 Females), or 8·9 per cent. than in 1891.

The number of distinct Families in the County at the time of the late enumeration was 37,987, the average nber of persons in a family being thus 5·2; and the number of Inhabited Houses was 37,745, showing an rage of 5·2 persons to each house. In calculating these averages, the special Inmates of Public Institutions e been omitted.

The following Statement shows, by County Districts (as constituted under the Local Government eland) Act, 1898), the number of persons in 1891 and 1901; and the increase or decrease during the ade:—

County Districts.	Population.		Increase or Decrease between 1891 and 1901.		
	1891.	1901.	Increase.	Decrease.	Rate per cent.
Ballina Urban,	4,846	4,505	.	341	7·0
Castlebar Urban,	3,558	3,585	27	.	0·8
Westport Urban,	4,070	3,892	.	178	4·4
Ballina Rural,	22,548	20,148	.	2,400	10·6
Ballinrobe Rural,	24,694	21,238	.	3,456	14·0
Belmullet Rural,	14,333	13,845	.	488	3·4
Castlebar Rural,	25,363	22,937	.	2,426	9·6
Claremorris Rural,	28,424	25,820	.	2,604	9·2
Killala Rural,	9,290	8,254	.	1,036	11·2
Swineford Rural,	48,261	44,162	.	4,099	8·5
Westport Rural,	33,311	30,780	.	2,531	7·6
Total,	218,698	199,166	.	19,532	8·9

From the foregoing Statement it will be observed that there was an increase of 27 persons in Castlebar ban, and a decrease in each of the other County Districts. The highest percentage of decrease took place Ballinrobe Rural and Killala Rural, viz., 14·0 and 11·2, respectively; and the lowest in Belmullet Rural Westport Urban, viz., 3·4 and 4·4 respectively.

APPENDIX IV.

Towns having, in 1901, a population of 2,000 and upwards are classified as Civic Areas.

The County contains three such Areas, viz., Ballina, Castlebar, and Westport. In 1891 the population of these Areas amounted to 12,474; in 1901 it was 11,982, showing a decrease of 492 persons, or 3·9 per cent.; in the rural portions of the County the decrease was 9·2 per cent.

The following Statement shows the Educational status of the Inhabitants of the County of Mayo in 1891 and 1901, in so far as relates to the Degrees of Elementary Education relative to which inquiry was made on the Census Forms :—

Degrees of Elementary Education.	Rate per cent. of Total Population.	
	1891.	1901.
Read and Write, ...	50·7	60·9
Read only, ...	9·8	6·9
Illiterate, ...	39·5	33·1
Total, ...	100·0	100·0

From the above it will be seen that whereas, according to the Returns of 1891, only 50·7 per cent. of the Inhabitants, at all ages, could "read and write," in 1901 60·9 per cent. could do so; that the percentage of the population who could "read only" in 1891 was 9·8, and in 1901 6·0; and that the percentage of the "illiterate" fell from 39·5 in 1891 to 33·1 in 1901.

In 1891 32·0 per cent. of the inhabitants aged five years and upwards were illiterate (29·2 per cent. of the males and 34·4 of the females); in 1901 the percentage was but 25·1 (23·2 of the males, and 26·9 of the females).

The number of children attending school in the County of Mayo, according to the Census of 1891 (week ending 30th May), was 31,091, or 35·7 per cent. of persons aged 5 years and under 20 in the County as then constituted; in 1901 the number returned (for week ending 11th May) was 26,161, or 36·9 per cent. of the persons aged 5 and under 20.

In 1891 the number of persons in the County of Mayo (as then constituted) returned as sick on the night of the Census, was 1,329, or one in every 165 of the population; in 1901 the number so returned was 980, or one in every 203 of the population; of the latter number 613 were at their own homes, and 367 were in hospital.

The number of persons returned in 1891 as receiving relief under the Poor Law System was 3,763, or one in every 58 of the population; of this number 1,052 were inmates of Workhouses, and 2,711 were in receipt of outdoor relief; in 1901 the number returned was 3,251, or one in every 61 of the population; 906 of these being in the Workhouses, and 2,345 on outdoor relief.

According to the Returns of the Registrar-General, the number of marriages registered in the County of Mayo during the ten years ending 31st March, 1901, was 7,167, equal to an average annual rate of 3·4 per 1,000 of the population. The number registered in the whole of Ireland during the same period, affords an average annual rate of 4·8 per 1,000.

The number of Births registered in the County during the ten years was 47,216, affording an average annual rate of 22·6 per 1,000 of the population, the average yearly rate for the whole of Ireland during the same period being 23·0 per 1,000.

The Deaths registered during the decennium amounted to 29,095, being equal to an average annual rate of 13·9 per 1,000; the corresponding rate for the whole of Ireland was 18·2 per 1,000.

The number of Emigrants during the ten years ending 31st March, 1901, who stated that they were from the County of Mayo, amounted to 40,703 (15,182 males and 25,521 females); the number for the decade ending 31st March, 1891, was 42,368; for that ending 31st March, 1881, 24,705; for that ending with March, 1871, 27,496; and for that ending with March, 1861, 29,317, making a total of 164,589 for the fifty years.

C.—Return showing the Population, Area, Valuation, and Average Valuation per Head of Valuation in each Poor Law Union in the County of Mayo containing Congested Districts.

Supplied by the Congested Districts Board.

E.—RETURN SHOWING THE RATIO OF POPULATION TO VALUATION IN CERTAIN ELECTORAL DIVISIONS IN COUNTY MAYO, AND OTHER PARTICULARS.*

Specially prepared for the Commission.

EXPLANATORY NOTE.

This return (prepared by the Commissioner of Valuation) shows the total rateable valuation (1906), the population (1901), and the average valuation per head of population in each Electoral Division,

(1.) Where that average is under 30*s.*

(2.) Where that average is between 30*s.* and 50*s.*, but is brought below 30*s.* by the exclusion from the dividend (*i.e.*, the total rateable valuation of the electoral division) of all ratings valued at over £50. In these cases the acreage and valuation of each excluded area is given.

(3.) Where the electoral division, though scheduled as congested, does not come within either of the above classes.

The total number of electoral divisions in Mayo is 154, of which 151 are rural and 3 urban. The total number of electoral divisions comprised in this return is 101, all rural (with one exception); of these 7 are not scheduled as congested and are distinguished by an asterisk.

The total number of divisions in County Mayo scheduled in 1891 as congested was 94, of which 4 were then not below 30*s.* in point of average valuation per head of population. Between 1891 and 1901 the average valuation rose about 9 per cent. (owing mainly to the decrease in population). Of the 94 scheduled divisions, 12 are not now below 30*s.* Of these 12 divisions, 9 are not below 30*s.* normally, but are when the total valuation of all ratings above £50 is excluded, and 3 are above 30*s.* even after these exclusions. The names of these 3 divisions are printed in italics.

F.—STATISTICS RELATING TO THE NUMBER, ACREAGE, VALUATION AND POPULATION OF VARIOUS CLASSES OF HOLDINGS, AND TO THE CHIEF DIVISIONS OF THE LAND IN THE COUNTY OF MAYO.

Specially prepared for the Commission.

EXPLANATORY NOTE.

The information contained in the Tables I.-IV. has been specially prepared for the Commission by the Registrar-General from the office summaries of the Census of 1901. The importance of the figures and their interpretation were touched upon in a memorandum submitted by the Secretary to the Commission, and printed in the Appendices to the First Report of the Commission, pp. 351 *et seq.* It will suffice to remark here that, though nominally these tables are returns of "holdings," they are really returns of landholders, for, if one man has half-a-dozen farms in the same county, he is returned as having a single holding of their combined valuation. It is obvious that, so far as counties are concerned, these returns, being actually though not nominally returns of landholders, show more clearly the size of the problem requiring treatment than a return of holdings would—*e.g*, a man has in County Mayo six holdings valued at £2, £4, £6, £10, £20, and £40. A return of holdings would in this case apparently suggest that there were at least three holdings needing enlargement; whilst the present returns more clearly indicate the situation by showing only one holding of £82 valuation. As regards the size of the remedial material that might be made available for relieving congestion, these returns might, however, mislead—*e.g.*, in the case taken above the returns would suggest that there was in County Mayo one holding of £82 valuation that possibly might be secured for the enlargement of small holdings; whilst in point of fact there are six holdings of varying size scattered over the county.

The interpretation of the figures becomes more complicated when they are examined not for the whole of a county, but for the comparatively small area of an electoral division—the present unit of congestion. In these returns where one man has several holdings in County Mayo, but in different electoral divisions, or has one holding which runs into two electoral divisions, the entire is allocated to the division containing the holding or the part of the holding of highest valuation; hence the figures in these returns do not represent the actual state of things in each electoral division, as they may include in such division land situated in other electoral divisions (of County Mayo), and may exclude land geographically belonging to the division itself. Thus the area, population, or valuation shown for an electoral division might be larger or smaller than the actual area, population, or valuation of that division. Adjustments could have been made rectifying this, but they would have immensely complicated matters. Moreover, the returns would then have been based in part on holdings rather than on landholders, and this would, for the reason shown above, have exaggerated the size of the problem. Consequently the Commission, having considered the relative advantages of adjusted and unadjusted returns of holdings and landholders, decided that as regards most areas the unadjusted returns of landholders by electoral divisions would be the most useful.

The information contained in Tables V. and VI. has been specially prepared for the Commission by the Department of Agriculture and Technical Instruction for Ireland from the office summaries of the Agricultural Statistics of 1906. Their importance and interpretation were touched upon in the memorandum to which reference has been already made, and it will suffice to remark here that the difference between the number of holdings given in Table V. and the number given in Table I. is accounted for by the following causes:—

(1) Table V. is a return of holdings, and Table I. a return of landholders;

(2) Table I. refers to agricultural holdings only, and Table V. includes labourers' cottage holdings and gardens; and

(3) Differences of classification and adjustment.

APPENDIX IV.

APPENDIX IV.

G.—TABLES SHOWING THE WORKING OF THE LAND ACTS IN CO. MAYO.

1. TABLE showing the Number of Cases in County Mayo in which Judicial Rents have been fixed by all the Methods provided by the Land Law Acts, for First and Secondary Terms, from the commencement of Proceedings to 31st March, 1906; and also a Summary of the Acreages, Rents of Holdings prior to the creation of First Statutory Term, Rents of Holdings for a First Statutory Term, and Rents of Holdings for a Second Statutory Term. (Arranged from the Report of the Irish Land Commissioners for the year ending 31st March, 1906, pp. 72 and 74.)

First or Second Statutory Term.	Number of Cases in which Judicial Rents have been fixed.	Acreage Statute Measure.	Rents of Holdings prior to creation of First Statutory Term.	Judicial Rents fixed for a First Statutory Term.	Percentage of Reduction.	Judicial Rents fixed for a Second Statutory Term.	Percentage of Reduction of Rents fixed for a Second Statutory Term on Rents fixed for a First Statutory Term.
		A. R. P.	£ s. d.	£ s. d.		£ s. d.	
First Term, ..	24,075	525,835 0 23½	212,059 1 5½	171,658 11 4	19·1	—	—
Second Term, ..	9,097	207,084 2 36½	87,241 18 9	70,726 14 5	15·4	59,771 9 6	15·5

2. TABLE showing the Number of Loans issued in County Mayo under the Purchase of Land (Ireland) Act, 1885 (Advances in Cash), the Number of Estates, and the Total Acreage and Rental of the Holdings in respect of which the Loans have been issued; also the Total Purchase money and the amount of Loans obtained from Land Commission, and the Number of Years' Purchase of Rent, during the period from 22nd August, 1885, to 31st March, 1902.

During the four years ended 31st March, 1906, there were no further proceedings towards purchase taken under this Act.

Taken from the Report of the Irish Land Commissioners for the year ended 31st March, 1906, p. 94.

Number of Loans.	Number of Estates.	Area in Statute Measure.	Net Rent (a)	Purchase-money agreed upon.	Amount of Loans.	Number of years' purchase of Rent.
		A. R. P.	£ s. d.	£	£	
524	17	14,966 1 3	8,198 13 11	137,599	133,753	16·7

(a) The Rents stated in this Return are the Rents payable by the Tenants previous to the sale, except in a few cases where the Tenants agreed to purchase subject to a Head Rent, Crown Rent, Tithe Rent, or Drainage Charge or other outgoing, previously payable by the Landlord, and in such cases the outgoing has been deducted from the Rent previously payable by the Tenant.

3. TABLE showing the Number of Loans issued in County Mayo under the Purchase of Land (Ireland) Acts, 1891, 1896 (Advances in Guaranteed Land Stock), and the Total Acreage and Rental of the Holdings in respect of which the Loans have been issued; the Total Purchase-money and the Amount of Loans obtained from the Land Commission, and the Number of Years' Purchase of Rent, during the period ended 31st March, 1906.

Taken from the Report of the Irish Land Commissioners for the year ended 31st March, 1906, p. 116.

The following detailed information as regards direct sales is taken from the Report of the Estates Commissioners, for 1906 (pp. 28–35).

In the County Mayo (non-congested) one holding, subject to a judicial rent fixed or agreed to before the 14th August, 1896 (commonly called a First Term Rent), amounting to £100, was sold at a price which came within the zones, the number of years' purchase being 23·5 and the percentage of reduction in the purchase annuity as compared with the rent being 23·6.

In the County Mayo (congested) 6 holdings, subject to First Term Rents amounting to £22 17*s.* 0*d.*, were sold at prices which came within the zones; the average number of years purchase being 19·1, and the average percentage of reduction in the purchase annuity as compared with the rent being 37·9.

As regards holdings subject to rents fixed or agreed to since the 14th August, 1896 (commonly called Second Term Rents) 17, subject to a rental of £203 13*s.* 0*d.*, were sold in Mayo (non-congested) at a price within the zones, the average number of years' purchase being 23·7, and the percentage of reduction being 22·9.

In Mayo (congested) 14 holdings, subject to Second Term Rents of £67 12*s.* 6*d.*, were sold, within the zones, for an average of 21·6 years' purchase, the average percentage of reduction being 29·8. Fifteen holdings were sold at prices outside the zones, subject to a rental of £60 8*s.* 9*d.*, the number of years' purchase being 21·5, and the percentage of reduction being 30·1.

As regards non-judicial rent cases, 3 holdings in Mayo (non-congested), subject to a rental of £48 11*s.* 6*d.*, were sold for an average of 19·7 years' purchase, the average percentage of reduction being 35·9. In Mayo (congested) 2 holdings, subject to a rental of £5 7*s.* 6*d.*, were sold for an average of 21·0 years' purchase, the average percentage of reduction being 31·7.

In Mayo (non-congested) 2 holdings, subject to a rental of £185, were sold for £4,175, of which £600 was paid in cash by the purchaser, and £3,575 was advanced by the Irish Land Commission.

M.—LOCAL TAXATION IN COUNTY MAYO.

The following STATEMENTS show (1) the Poor Rates in each Electoral Division in each Union for the financial years ending in 1881 and 1891; (2) County Cess in each Barony in the County in 1891—there is no official information available as to County Cess in 1881; and (3) fuller details about the new Poor Rate for 1901 and 1905. It must, however, be pointed out that the Rates in 1881 and 1891 cannot be compared with the Rates in 1901 and 1905. Prior to the Local Government (Ireland) Act, 1898, Poor Rate was charged to Electoral Divisons and County Cess to Baronies. Now Union charges are levied over the whole Union, District charges on Rural Districts, County charges on the County, separate charges on special areas, and the whole is complicated by the charges made in the Rates by the Local Government Act of 1898.

Before that Act the Poor Rate was paid by the tenant (except in the case of holdings valued at £4 and under, where the landlord paid), but the tenant was entitled to deduct part of the amount paid from his rent, usually half. County Cess was paid and borne by the occupier, except in the case of holdings let after the 1st August, 1870. In these cases, if the holding was valued at over £4, the tenant paid, but was entitled to deduct from his rent part of the amount paid, usually one-half. If the holding was valued at £4 or under, the County Cess was paid by the landlord.

Under the Act a Grant in Aid, called the Agricultural Grant, and amounting to £727,655, is made annually to the local authorities. This Grant is equal to half the combined Poor Rate and County Cess which was certified to be taken to have been raised off agricultural land in what is known as the standard financial year. The balance of the money required for purposes formerly met out of the County Cess and the Poor Rate is now provided by means of the new Poor Rate, County Cess being no longer collected *eo nomine*.

The Act was intended to secure the benefit of the Agricultural Grant in respect of existing tenancies to the landlord as regards the old Poor Rate, and to the tenant as regards the County Cess. In order to effect this it was provided that in the case of tenancies existing at the 1st April, 1899, the tenant should, in general, pay the new Poor Rate, but that the rent should be adjusted in such a way as to secure to landlord and tenant their respective shares of the benefit of the Agricultural Grant. In the case of tenancies created after the 1st April, 1899, the tenant must, in general, pay the Poor Rate, and has no right to deduct anything from his rent. Where a fair rent is fixed after the 1st April, 1899, special provision is made by Section 55 to ensure permanently to the occupier and the landlord their respective benefits from the Agricultural Grant.

APPENDIX IV.

1. STATEMENT showing the Poor Rate in the £ made in the Electoral Divisions of the Unions which are included wholly or partly in County Mayo for the financial years 1881 and 1891.

(a) The enumeration of Emigrants from Irish Ports did not commence till the 1st of May, 1851.

S.—STATE-AIDED EMIGRATION.

*** *Information was desired by the Commission as to the number of families who, with the assistance of Public Funds, emigrated from each Union in* 1883–4.

It may be as well to explain that, under 12 and 13 Vic., c. 104, sec. 26, Boards of Guardians were empowered to apply part of the rate and to borrow money "for the purpose of defraying, or assisting to defray, the expenses of the emigration of poor persons."

Under the Arrears of Rent (Ireland) Act, 1882 (45 and 46 Vic., c. 47), power was given to borrow from Public Funds on easier terms for the above purposes, and the Treasury might authorise the Commissioners of Public Works to make grants to Boards of Guardians for the same purposes, the total grants not to exceed £100,000, and the sums granted not to exceed £5 for each person. These grants were confined to the nine counties, part of which are at present scheduled as congested, the Unions of Belmullet, Newport, Swinford, Clifden, and Oughterard being specially mentioned.

Under the Tramways and Public Companies (Ireland) Act, 1883 (46 and 47 Vic., c. 43), the limit of the grant was increased to £200,000, of which one-quarter might be applied for the purpose of migrating "persons or families," and the limit of individual grants was increased to £8.

The total grants made under these sections amounted to £133,172 10*s.* 2*d.* up to 1891, when they were repealed by Section 35 of the Land Act of 1891, which established the Congested Districts Board.

The following Table shows the total number of Stated-aided Emigrants from Mayo in 1883–1884, and the amount of grant to each Union :—

Supplied by the Local Government Board.

Union.	Emigration Season, 1883.			Emigration Season, 1884.			Total.	Total Grant.
	Canada.	Australia.	United States.	Canada.	Australia.	United States.		
								£ s. d.

...o women or girls employed at agricultural labour in Ardnaree, Crossmolina, or Cloghans sub-districts; in fact, few employed in this ...t, especially in winter.
...ery little employment for women and girls save in the harvest.
...tate of wages low in this district. Most of the men and boys who are able to do so go to Scotland. No women or girls so employed ... winter, and not many during summer. They are generally hired by the quarter at from £1 5s. to £1 10s.
...ery little employment for agricultural labourers.
...ot much employment for agricultural labourers. The holdings being small, the tenant's family do all the work. All fully grown ...ltural labourers migrate to England in February and March. Scarcely any women or girls employed, except for a short period at ...t time.
...Without diet in most cases.
There are no female agricultural labourers.

APPENDIX IV.

V.—AGRICULTURAL SCHEMES OF THE DEPARTMENT OF AGRICULTURE IN OPERATION IN THE COUNTY OF MAYO DURING THE YEAR 1906–7.

Specially supplied by the Department.

Scheme.	Estimated Cost to Joint Fund.
	£
Itinerant Instruction in Agriculture, ...	350
Poultry-keeping, ...	280
Buttermaking, ...	300
Horticulture and Bee-keeping, ...	215
Cottage and Farm Prizes, ...	240
Live Stock, ...	800
Subsidies to Shows, ...	250
Flax, ...	40

Itinerant Instruction.

Five Itinerant Instructors are employed in the county under the County scheme, viz., one in Agriculture, one in Horticulture, two in Buttermaking, and one Poultry-keeping (also a temporarry Itinerant Instructor in Poultry-keeping).

Agricultural Instruction in Congested Districts.

In addition to the Instructor employed under the County scheme, an Agricultural Overseer (Mr. Hugh Kennedy, Westport) and six Assistants are at present employed.

Special Demonstration Plots.

Mrs. Stuart,	Ardnaree, Ballina.
Mrs. Watts,	Knockanillaun, Ballina.
J. M Andrew,	Blackforth, Foxford.
C. Burke,	Oldtown, Ballindine.

APPENDIX IV.

W.—NOTE ON MIGRATORY LABOURERS

The special characteristics of the temporary migration of agricultural labourers from the congested districts which distinguish it from apparently similar movements of labour in other counties and from the ordinary examples of the mobility of labour in other trades, have been briefly discussed in the Donegal Statistical Abstract (see Appendix to Second Report of Commission, Cd. 3319, 1907, pp. 314–5). The total number of persons (including females) who had temporarily migrated from Ireland, or who at the time of the collection of the Agricultural Statistics in 1906 had expressed their intention of subsequently migrating, was 15,286. Of this number 8,428 were resident in County Mayo. Of these 2,267 were landholders, but of the landless labourers 4,282 were the sons, and 259 were the daughters, of landholders who worked on their parents' farm when at home. The following Table taken from the Annual Report of the Department of Agriculture on Irish Migratory Labourers for 1906 (pages 38 and 39), gives further information on the subject:—

Poor Law Union.	Number of Migratory Agricultural Labourers not Landholders.	Number of Migratory Agricultural Labourers having Land, and Area of their Holdings.												Total Number of Migratory Agricultural Labourers.	Where Employed.			Number of Migratory Agricultural Labourers who had not left their homes at the time of the Inquiry, included in foregoing Columns.
		Not exceeding 1 acre.	Above 1 and not exceeding 2 acres.	Above 2 and not exceeding 3 acres.	Above 3 and not exceeding 4 acres.	Above 4 and not exceeding 5 acres.	Above 5 and not exceeding 10 acres.	Above 10 and not exceeding 15 acres.	Above 15 and not exceeding 20 acres	Above 20 and not exceeding 25 acres.	Above 25 and not exceeding 30 acres.	Above 30 and not exceeding 40 acres.	Above 40 acres.		In England.	In Scotland.	Elsewhere in Ireland.
